

EE245 Control Systems

Sr. No	Title
1	To perform basic operation of MATLAB commands.
2	To study and perform feedback control system.
3	To study and plot various test signal generators.
4	To study and plot DC Servo Motor Torque speed characteristic.
5	To study and plot two Phase AC Servo Motor Torque characteristic.
6	a) To study the steady state and frequency response behavior of type '0' control system on standard test signals. b) To study the steady state and frequency response behavior of type '1' control system on standard test signals. c) To study the steady state and frequency response behavior of type '2' control system on standard test signals.
7	To perform commands of transfer function and state space representation using MATLAB.
8	To find out transfer function of system using Block Diagram Reduction method using MATLAB.
9	a) To study and perform proportional control action. b) To study and perform Proportional plus integral control action. c) To study and perform proportional plus integral plus derivative control action.
10	To study and plot root locus, Bode plot & Nyquist plot using MATLAB commands.
