

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY
CHANDUBHAI S PATEL INSTITUTE OF TECHNOLOGY
DEPARTMENT OF INFORMATION TECHNOLOGY
ACADEMIC YEAR: 2018-19

List of Experiments

Subject: Cryptography and Network Security (IT348) (6th Sem)

Exp. No	Name of Experiment	Hours
1.	The transmission of information need to be secure over the communication channel and the data has to be confidential. Study and implement the practical approach for Steganography. -Using DOS commands -Using OpenPuff Tool	02
2.	In computers, Footprinting is the process of accumulating data regarding a specific network environment, usually for the purpose of finding ways to intrude into the environment. Footprinting can reveal system vulnerabilities and improve the ease with which they can be exploited. Study practical approach to implement Footprinting: Gathering Target Information making use of following tools: Dmitry – Deepmagic Reference : https://www.youtube.com/watch?v=_zd3goGLM7Q UA Tester Reference : https://www.youtube.com/watch?v=WsTupi32ZYE Whatweb Reference : https://www.youtube.com/watch?v=Fx9sIgxcNwU	02
3.	Port scanning involves connecting with TCP and UDP ports on a system, once you have found the IP addresses of a target organization by Footprinting technique. You have to map the network of this organization. Nmap is a network mapper and a power full, flexible, freely available and easy to use tool. It is available for both Linux and Windows based operating system. Study practical approach to implement Scanning and Enumeration Techniques using Nmap. Reference : Demo	02
4.	Implement RSA algorithm. Reference : RSA	02
5.	Implement S-DES symmetric encryption Algorithm. Reference: S-DES	04

ACADEMIC YEAR: 2018-19

6.	System hacking is the way hackers get access to individual computers on a network. Ethical hackers learn system hacking to detect, prevent, and counter these types of attacks. Study practical approach to implement System Hacking and learn different ways to crack password. Reference: Demo	02
7.	Practical approach to study Social Engineering and reverse social engineering to perform ethical hacking. Reference: Demo	02
8.	Attacking Web Application: SQL injection. Reference: Demo	04
9.	Practical approach to study Wireshark. Reference: Wireshark	02
10.	Practical approach to study Web Application Vulnerability. OWASP-ZAP Reference: https://www.youtube.com/watch?v=KFZzgOnkLE8	02
11.	Write a program to generate Digital Certificate. Reference: Code	02
12.	Case study on security.	04
