

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

University Examination

Date: 06/12/2017 Day: Wednesday

Time: 10:00 am to 10:30 am

Total Marks: 20

Student's ID No.									
Student's Name: _____									
Student's Sign : _____									
Supervisor's Name : _____									
Supervisor's Sign: _____									

Answer Sheet for Multiple Choice Questions (MCQs), True or false and Match the following
Examination : MPT- December 2017
Semester: [2 nd]
Section : I
Course Code : PT780
Course Name: Physical & Functional Diagnosis I for Paediatric

Important Instructions:

- There are two sections in the paper. **SECTION –I** contains 20 Questions and **SECTION – II** contains 3 Questions.
- **SECTION –I** should be answered in the question paper itself & **SECTION – II** should be answered in separate answer book.
- Marks on the right side suggest the total marks of that question.
- Maximum time allotted for **SECTION – I** is 30 minutes. Question paper for **SECTION – II** will be given once the **SECTION – I** is completed within the stipulated time and returned. However, Candidates who complete **SECTION – I** earlier than 30 minutes can collect main question paper for **SECTION –II** immediately after handing over the **SECTION-I** question paper with answers.
- **SECTION – I** should be attached with the main answer book at the end of the examination and should be submitted to the supervisor.

SECTION-I

Multiple Choice Questions: (MCQs) (Encircle the correct answer)

(10 × 1 = 10)

1. Evaluation of a newborn infant presented with a weak cry at 5 minutes after birth shows weak irregular gasping, Cyanotic appearance in extremities, pulse rate of less than 100, with some flexion movement. What would be the APGAR score of the newborn.
 - a. 3
 - b. 5
 - c. 7
 - d. 8
2. A CP child who can walk in most settings and climb stairs holding onto a railing, experience difficulty walking long distances and balancing on uneven terrain, inclines, in crowded areas or confined spaces and have only minimal ability to perform gross motor skills such as running and jumping. Such child is classified According to GMFCS as
 - a. Level 1
 - b. Level II
 - c. Level III
 - d. Level IV

(P.T.O.)

3. Brazelton Neonatal Behavioral Assessment Scale, should be used up to age of _____
 - a. 1 month
 - b. 2 month
 - c. 3 month
 - d. 6 month
4. _____ is indicated by elevated Alpha Fetoprotein levels.
 - a. Turner's syndrome
 - b. Klinefelter's syndrome
 - c. Neural tube defects
 - d. Down's syndrome
5. Everything is true for Symmetrical tonic labyrinthine reflex except:
 - a. Integrated by 6 months
 - b. Onset is at 3 months
 - c. Can be tested in supine or prone
 - d. In supine it causes increased extensor tone/ extension of all limbs
6. A normal infant sits briefly leaning on her hands, reaches for and grasps a cube and transfers it from hand to hand. She babbles but cannot wave bye-bye, nor can she grasp object with her finger and thumb. Her age is:
 - a. 4 months
 - b. 7 months
 - c. 10 months
 - d. 14 months
7. An infant sits with a minimal support, attempts to attain a toy beyond reach, rolls over from supine to prone position, and does not have a pincer grasp, is at a development of:
 - a. 3 months
 - b. 4 months
 - c. 6 months
 - d. 8 months
8. IQ between 50-70 indicates
 - a. Mild mental retardation
 - b. Moderate Mental retardation
 - c. Severe mental retardation
 - d. Profound mental retardation
9. "Sunset" sign is associated with
 - a. Hydrocephalus
 - b. Microcephaly
 - c. Congenital Dislocation of Hip
 - d. Encephalitis
10. Differentiating an ASD from a VSD using a chest X-ray is by detection of?
 - a. Enlargement of pulmonary artery
 - b. Enlarged left atrium
 - c. Dilated aorta
 - d. Pulmonary plethora

Identify the sentence as True or False:

(5 × 1 = 5)

(Please tick mark the answer)

True False

- | | | |
|--|--------------------------|--------------------------|
| 11. The GMFM is a standardized observational instrument designed and validated to measure change in gross motor function over time in children with cerebral palsy | ☐ | ☐ |
| 12. The Bruininks-Oseretsky Test of motor proficiency is appropriate for children from 2 to 12 years of age. | ☐ | ☐ |
| 13. 5 components of APGAR are: Pulse rate, Respiratory rate, skin colour, activity and reflex grimace | ☐ | ☐ |
| 14. Alberta Infant Motor Scale can be used in the newborn. | ☐ | ☐ |
| 15. Acquisition of brain injury either before birth or in first years of life is one of the criteria to diagnose CP | ☐ | ☐ |

Match the following

(5 × 1 = 5)

16.	INFANID	A. To assess balance function
17.	PBS	B. To assess the development of premature infant
18.	BAYLEY	C. To assess the prematurity of infant
19.	BOTMP	D. To assess fine motor and agility
20.	AIMS	E. To assess treatment progress and modification
		F. To assess intelligent quotient
		G. To assess cognitive function

(16 -), (17-), (18-), (19-), (20-)

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

2nd Semester of M.P.T. Examination

December 2017

PT780 Physical & Functional Diagnosis I for Paediatrics

Date: 06/12/2017

Time: 10:30 am -1:00 pm

Maximum Marks: 50

Instructions:

1. There are two Sections in the paper. **SECTION –I** contains 20 Questions and **SECTION – II** contains 3 Questions.
2. **SECTION –I** should be answered in the question paper itself & **SECTION – II** should be answered in separate answer book.
3. Marks on the right side suggest the total marks of that question.
4. Maximum time allotted for **SECTION – II** is 2 Hr 30 min.
5. Draw the figure where necessary.

SECTION-II

Q. 1. Short answers (5 out of 7) (Answer not exceeding 50 words) (5 × 2 = 10)

- a. Diagnostic tests for Down's syndrome
- b. Need for CSF examination in paediatric disorders.
- c. Denver Developmental Screening test
- d. Indications of muscle biopsy.
- e. Principles of screening and detection of risk of fetus.
- f. Evaluation of sensory function in infants.
- g. Advantages and disadvantages of gross motor function measure.

Q. 2. Short Notes (4 out of 5) (Answer not exceeding 150 words) (4 × 5 = 20)

- a. Diagnostic tests and investigations for muscular dystrophy
- b. Intelligence testing for pediatric population
- c. Electro Myography for pediatric population
- d. Explain the various methods, test and tools to identify high risk infants.
- e. Write about the importance of muscle and nerve biopsy in the diagnosis of pediatric diseases.

Q. 3. Essay (2 out of 3) (2 × 10 = 20)

- a. List out various primitive reflexes and explain any 2 in detail with its significance in the developmental screening of infants.
- b. Describe any two Cardiovascular endurance tests used in children and compare the strengths and limitation of both.

(P.T.O.)

- c. A 7 year old child is having a progressive difficulty in movement of all 4 limbs since few days and now is unable to sit independently due to muscle weakness. Child has gradual onset respiratory distress and has a depressed tendon reflexes in upper limb and lower limb. CSF study finds elevated CSF protein. Write down the detailed assessment of this patient with special emphasis on differential diagnosis and special tests.
