

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
Bachelor of Computer Applications (BCA)
Semester-III University Examination March-2018
CA215 System Analysis and Design

Date: 29.03.2018, Thursday Time: 1.30 p.m. to 4.30 p.m. Maximum Marks: 70

Instructions:

- 1. Attempt both sections in separate answer books.**
- 2. Figure to right indicates marks.**
- 3. Make suitable assumption when necessary.**

SECTION – 1

Q.1 Do as directed **[11]**

1. _____ is just like a raw material which needs to be processed.
2. MIS stands for Management Information System. **(True/False).**
3. Define data dictionary.
4. JAD stands for _____.
5. Define system.
6. List the types of questionnaire.
7. Layout tools describe the position of data, messages, and headings on display screens. **(True/False).**
8. TPS stands for _____.
9. List the components of structured analysis.
10. List the tools used for documenting procedures and decisions.
11. SRS stands for System Requirement Specification. **(True/False).**

Q.2 Answer the following (Any Three) **[12]**

1. List and explain any one roles of system analyst.
2. List and explain any two types of interview.
3. List and explain any two characteristics of system.
4. List and explain any one types of feasibility.
5. List and explain any two components of system.
6. List and explain any two elements of data dictionary.

Q.3 Answer the following (Any Two) **[12]**

1. Write a note on Software Development Life Cycle.
2. Explain modern methods for collecting system requirements.
3. Draw Context Level Data Flow Diagram for “**Social Networking Application**”.

[P.T.O]

SECTION – 2

Q.4 Do as directed

[11]

1. Prototype refers to the working model of an application. **(True/False).**
2. _____ produces source code for entire application.
3. CASE stands for _____.
4. Define layout.
5. Testing is performed to prove that there are no errors in program. **(True/False).**
6. Define conversion.
7. Error avoidance prevents errors from occurring in the software. **(True/False).**
8. QA stands for _____.
9. List the categories for automated tools.
10. Prototypes are created quickly. **(True/False).**
11. Define software reliability.

Q.5 Answer the following (Any Three)

[12]

1. List and explain any one approach to software reliability.
2. List and explain any two types of output.
3. List and explain any one type of maintenance.
4. List and explain any one types of training method.
5. List and explain any one action occurring at interface.
6. List and explain any two prototype strategies.

Q.6 Answer the following (Any Two)

[12]

1. Write a note on steps in prototype method.
 2. Explain modularity, coupling and cohesion with suitable example.
 3. Explain any two conversion method.
