

Candidate Seat No. _____

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

Bachelor of Computer Applications

Semester-IV University Examination May, 2018

CA207/CA217 – Multi Paradigm Programming Language

Date: 12-5-2018, Saturday Time: 10:00 a.m. to 01:00 p.m. Maximum Marks: 70

Instructions:

1. Attempt both sections in separate answer books.
2. Figure to right indicates marks.
3. Make suitable assumption when necessary.

SECTION-I

Q – 1 Do as directed. [11]

1 What do you mean by mutability of object?

2 >>> k = r = False

 >>> ans = k + r

 >>> j = 10

 >>> ans = j – ans

 >>> ans

 Output is: _____

3 >>> r = [1,2,2,1]

 >>> t = r[:2]

 >>> t

 Output is: _____

4 What is the difference between “/” and “//” operator?

5 >>> r = [1,2,2,1,3,2,1]

 >>> t = set(r)

 >>> t

6 Python is case sensitive language. (True/False)

7 >>> 4 < 3 < 5 != 2 < 7

 Output: _____

8 >>> [3, “abc”] == [“abc”, 3] Output is: _____

9 >>> “College” * 4

 Output is: _____

10 >>> l = “Welcome”

 >>> l[:3]

 Output is: _____

11 Which python construct is used to run a program from command line?

Q – 2 (A) What is Python? Explain its features in details. [8]

Q – 2 (B) Explain “Type” & “Value” of Python Object. [4]

OR

Q – 2 (A) Write a note on datatypes available in python. [8]

Q – 2 (B) Explain different paradigms of programming in detail. [4]

- Q – 3 Attempt the following. (Any 2) [12]**
1. How can we create user defined function in Python? Explain its variation with suitable example.
 2. Explain dictionary with suitable example. Demonstrate operations can be performed over the dictionary.
 3. What is magic method? Explain any 1 magic method with suitable example.
 4. Explain bound and un bound method with suitable example.

SECTION-II

- Q – 4 Do as directed. [11]**
1. Inheritance is a concept of reusability. Justify.
 2. What do you mean by client server architecture?
 3. Can a list can be a class member?
 4. What do you mean by module?
 5. What do you mean by function overriding?
 6. What is namespace?
 7. Write down syntax of inheritance in python.
 8. What is the use of `__bases__` ?
 9. What is the use of `super()`?
 10. What do you call a method which can be accessed only through class name?
 11. What do you mean by instantiation of class?

- Q – 5 Attempt the following in detail. (Any 2) [12]**
1. Write a complete note on `range()` with all its variation.
 2. Write a complete note on looping construct in python.
 3. Explain client server programming in detail. Explain it with figure.
 4. Explain file handling facility with suitable example.

- Q – 6 Attempt the following in detail. (Any 3) [12]**
1. What is inheritance? Explain in context of python.
 2. Explain namespace vs variable scope in detail.
 3. Write a detailed not on “Self”.
 4. Explain various operation on `Set()`?
 5. What is list? Explain various operations can be performed on list.
 6. Write a detailed note on python object.
