

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

Master of Science in Information Technology (Msc. (I.T.))

Semester-III University Examination November - 2019

MS 318 Web XML Applications

Date: 15.11.19, Friday Time: 01.30 p.m. to 04.30 p.m. Maximum Marks: 70

Instructions:

- 1. Attempt both sections in separate answer books.**
- 2. Figure to right indicates marks.**
- 3. Make suitable assumption when necessary.**

SECTION - I

Q1. (A) Answer Following. [05]

1. _____ contains information about what service does and what type of information it will make available.
2. _____ contract describe what is to be exchanged.
3. _____ is used for defining binding information, such as security, transaction and reliable messaging.
4. _____ address there is no port numbers.
5. Which of the following is not a valid attribute of data member:
(i) Emit Default Value (ii) Namespace (iii) Name (iv) Order

Q1. (B) Answer Following. [06]

1. Explain different parts of a WCF address in brief.
2. What are the two ways to create a proxy class on client side in WCF?
3. What is interoperability? Give an example of interoperability.

Q2. Answer Following. [12]

1. Discuss serialization with appropriate example.
2. Write short note on WCF architecture.

OR

Q2. Answer Following. [12]

1. Differentiate between wcf and web services.
2. Explain different features of WCF.

Q3. Answer Following. [12]

1. Write a short note on messaging patterns in WCF.
2. What is a channel? Write short note on channel stacks.

OR

Q3. Answer Following. [12]

1. What is a service? Explain service chain with example.
2. What is a message? Write short note on SOAP message structure.

SECTION - II

Q4. (A) Answer Following. [05]

1. Which of following is/are properties of channelfactory class:
(i) Credentials (ii) Endpoint (iii) State (iv) All (i), (ii), (iii).
2. Which of the following is correct description of abort state:
(i) Current state to closed state (ii) Current state to closed state instantly (iii) Current state to closed state after saving (iv) None of Above
3. _____ object in WCF allows to add new functionality to existing runtime class.
4. _____ file is used by visual studio to create instance of ClientBase class then it is accessible to client.
5. It is possible to create proxy class on client side with _____ WCF class.

Q4. (B) Do as Directed. [06]

1. List down different security mechanisms available in WCF.
2. What is a transaction? Give example of transaction.
3. What is IClientChannel interface? What is its function on communication from client side?

Q5. Answer Following. [12]

1. Explain following properties of transactions with appropriate example: i) Atomic ii) Consistent
2. Write a short note on IContextChannel interface and discuss its different properties.

OR

Q5. Answer Following. [12]

1. Explain following properties of transactions with appropriate example: i) Isolated ii) Durable
2. Write a short note on different types of WCF addresses.

Q6. Answer Following. [12]

1. Explain following service contract attributes: i) CallbackContract ii) ProtectionLevel iii) SessionMode.
2. Write short note on EndpointAddress class.

OR

Q6. Answer Following. [12]

1. Explain different types of contracts available in WCF with appropriate example.
2. What are different components of WCF binding?
