

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

Sixth Semester of B. Tech. (CE/IT) Examination

May 2014

CE308/CE308.01 Advanced Programming using .Net Framework (Elective I)

Date: 15.05.2014, Thursday

Time: 10 a.m. To 1:00 p.m.

Maximum Marks: 70

Instructions:

1. The question paper comprises of two sections.
2. Section I and II must be attempted in separate answer sheets.
3. Make suitable assumptions and draw neat figures wherever required.

SECTION – I

Q – 1 Attempt following questions:

[07]

1. What is significance of CLS in .Net Framework?
2. How Global Assembly is differ from Local Assembly in .Net Framework? Where it is stored?
3. Which IDE we are using for .Net Project? How it is related with Framework?
4. What are the different mechanisms to pass parameters to method in C#?
5. What do you mean by “Unsafe code” in C#?
6. Why we need to include Name Space in .Net program?
7. What is importance of MDI form in Windows base Application?

Q - 2 (a) Attempt Any Two Questions:

[08]

1. What is use of Reflection API? Explain it with example.
2. What is Managed code in .Net framework? How it is differ from Unmanaged code?
3. Explain Compilation Process of .Net framework program. Explain various components in this process.

(b) How Event is related with Delegates? Take example of simple arithmetic operations and write code in C# for same. [03]

OR

(b) What is Garbage collector in .Net Framework? How to hadle Garbage collecction in C#? [03]

(c) What are types of Constructor in C#? “In C#, Constructor can return the value”. Justify this statement. [03]

OR

- (c) How to implement inheritance in C# .Net? Explain types of inheritance possible in C# [03]
with use of simple code.

Q - 3 (a) Attempt any Three questions with example: [09]

1. Differentiate Connected and Disconnected architecture of ADO.NET.
 2. How function overloading is differing from function overriding? Explain Overridable and Overrides.
 3. Write and explain properties and methods of OpenFileDialog and SaveDialog.
 4. Explain Drawing Line and Drawing String in GDI+ with example.
 5. Explain at-least three properties and three methods of Array List with proper example and syntax.
- (b) Write a Console application using C# to implement insert, delete and fetch items from [05]
any one of Collection Class of .Net framework. (Hint: Stack, Queue, Arraylist, Hashtable, etc.) Take an input through command line arguments. Explain each function in comment of program briefly for what purpose it's used.

OR

- (b) Write a program using Windows based Application that behaves like calculator. Take [05]
three arguments from user two numbers and one operator and display proper result.
Use three text boxes to enter operator and operand, don't use separate buttons for
numbers and operations.
In this program define exception to handle invalid input from user, also handle zero
division exception.

SECTION – II

Q - 4 (a) Attempt following questions:

1. What is significance of *Global.asax* file in ASP .Net? [02]
2. How View State is differing from Session State? [02]
3. Differentiate *ExecuteReader()*, *ExecuteNonQuery()* and *ExecuteScalar()* method [03]
of *SqlCommand* Object of ADO .Net.

- Q - 5 (a)**
1. What is WCF? Explain steps and code to implement web service in WCF. [04]
 2. Why it is importance to implement Silverlight concept in ASP .Net Application? [03]

- (b) What is Web service? Draw architecture of XML web service with its components [07]
and protocols like UDDI, WSDL, Disco, etc. Also write steps to implement create and
consume XML web service for Multiplication of two numbers.

OR

- (b) 1. List and explain various ADO .Net objects with its purpose and methods in [04]
Database connectivity.
2. Explain Page Load and Post back event in ASP .Net with example. What is [03]
purpose of *IsPostBack()* method of page and *Autopostback* property of control?

- Q - 6 (a) 1. Explain *RegularExpression* Validator with example of PIN Code number of India. [02]
2. Write steps and code to populate and update ADO .Net DataSet object for [04]
Students details of Student_Master table, also write code in C# for same.

- (b) Write a steps and code of using *DataReader* object for fetching records from [04]
Student's details database in Microsoft SQL Server database. Display this record in
simple HTML table on web page.

OR

- (b) Explain Theme concept with use of CSS and Skin file for Web page appearance. [04]
Write sample source code to explain Skin and CSS of Theme. Which parameter we
have to change to apply Theme to all pages and single page? And in which file?

- (c) What is WPF? Explain it in details with all its features. [04]

OR

- (c) What is AJAX? What are benefits of it? Write source code in ASP.Net using C# to [04]
use any one of the AJAX control.
