

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

Sixth Semester of B. Tech. (CE/IT) Examination

December 2013

CE308 Advanced Programming using .Net Framework

Date: 07.12.2013, Saturday

Time: 1:30 p.m. To 4:30 p.m.

Maximum Marks: 70

Instructions:

1. The question paper comprises of two sections.
2. Section I and II must be attempted in separate answer sheets.
3. Make suitable assumptions and draw neat figures wherever required.

SECTION – I

Q – 1 Attempt following questions:

1. What is known as core part of .NET Framework? Explain the major pieces of it in detail using suitable diagram. [03]
2. Which method is used to free unmanaged resource in your code? Explain the disadvantage of using it. What is the alternative method used? [02]
3. What is DLL Hell? How .NET resolves the problem of DLL Hell? Explain COM Interop? [02]

- Q - 2 (a)
1. How to make shared assembly in .Net? Explain steps. [03]
 2. What is Name Space? Explain syntax to write name space with example. List various name space that we have to include for Database connectivity using ADO .Net. [03]
- (b)
1. Difference between Finalize and Dispose Methods. [04]
 2. How Array list Differ from Array?

OR

- (b)
1. How many types of access modifiers are used in .NET? Explain each one of them in detail. [04]
 2. What is the difference between abstract class and interface?
- (c)
- Explain delegates. Develop a Console Application in .NET for encryption decryption of a number using delegates. [04]

OR

- (c)
- Explain GDI+ and describe the classes available in *System.Drawing* namespace. [04]

Q - 3

- (a)
- Write Data Control Styles and Data Control Templates of the following controls: DataList, DataGrid, Repeater. [03]
- (b)
- Write a menu driven program that behaves like calculator. Take three arguments from user Two numbers and one operator and display proper result. Use command line Arguments. Define exception called ExWrongInput to handle invalid input, also handle zero division exception [04]
- (c)
- Explain Boxing and UnBoxing with in .Net. [02]

- (d) Explain various Collection Objects available in C# using any one of the collection of the object store the students information data and show the iteration of it. [05]

OR

Q-3

- (a) Write a Console application using C# to find that implement all string functions available in String Class of .Net framework. Take an input through command line arguments. Explain each function in comment of program briefly for what purpose it's used. [05]
- (b) List various techniques available for type casting and type conversion in C# .Net. Explain with suitable example. [03]
- (c) Explain Architecture of ADO.NET [03]
- (d) What are the modifiers available in C# and give a example of each one it. [03]

SECTION – II

Q - 4 (a) Attempt following questions:

1. Why HTTP is stateless protocol? Which are various methods to do state management in ASP .Net? Explain with example. [04]
2. What is Master page? Explain steps to implement Master Page in ASP .Net Web application. [03]

- Q - 5 (a) 1. Explain term with its purpose and usage in Application development: WCF, WPF. [04]
2. What is Silverlight? How to use Silverlight in Web Application development and for what purpose? [03]

- (b) Write Web Application using C#.NET which has class named "Supplier". Add GridView to it and bind dataset to the GridView which is returned from a Webservice Application, which has a method named 'GetSupplierData()'. Data fields are *Id, Name, Address, Date* in the table called "Supplier_Details". [07]

OR

- (b) What is significance of Web.Config file? Explain Theme concept with use of CSS and Skin file for Web page appearance. Which parameter we have to change to apply Theme to whole application? How Theme is related with Web.Config and Page directives? Explain with suitable example and code. [07]

- Q - 6 (a) 1. Explain purpose of following ADO .Net Objects: 1) *DataReader* 2) *DataSet*. [02]
2. List out various command properties and differentiate between various methods of executing commands of ADO.NET Command object. [04]

- (b) In Microsoft Access a table called student contain the detail about student such as ID, name, marks. Develop simple ADO.NET based program segment for displaying student information on console tab separated. [04]

OR

(b) In SQL server, a table called Employee contains the basic details about an employee such as Name, Age, Birt date, Joining Date. Develop an ADO.NET program using .Net which inserts detail in the database "Details" using DataAdapter Object in Web Application. [04]

(c) Explain various inbuilt Validation methods in ASP .Net with example. [04]

OR

(c) Explain various inbuilt Login methods in ASP .Net with example. [04]
