

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY**Sixth Semester of B. Tech (CE) Examination****May 2018****CE323 Advanced Web Technology****Date: 10.05.2018, Thursday****Time: 10.00 a.m. To 01.00 p.m.****Maximum Marks: 70****Instructions:**

1. The question paper comprises two sections.
2. Section I and II must be attempted in separate answer sheets.
3. Make suitable assumptions and draw neat figures wherever required.

SECTION – I**Q - 1 Do as Directed**

- a. List the types of errors in php. [01]
- b. Differentiate among WEB1.0, WEB2.0 and WEB3.0 [02]
- c. Define following: [02]
 a) DTD b) SOAP
- d. What is output of following php code? Justify your answer. [02]
 <?php
 \$x = 5;
 \$y = 10;
 function myTest() {
 global \$y;
 \$y = \$x + \$y;
 return \$y;
 }
 echo myTest();
 ?>

Q – 2.a “HTTP is stateless protocol”, justify this statement and also discuss various techniques available in php to provide state management. [06]

Q – 2.b Answer the following questions [Any Two]. [08]

- (i) “PHP does not support function overloading”. Justify this statement. Which php magic function does provide function overloading? Give example.
- (ii) Explain following mysqli function with example:
 a) mysqli_num_rows() b) mysqli_fetch_assoc()
- (iii) Write a php function which display total cost of product (quantity of product × price of product) between <p> and </p> with bold style inside body of html.

Q – 3 Do as Directed

- a) Explain following PHP string functions with example. Assume that \$str = “Hello World!” [06]
 a) str_pad() b) str_split() c) substr()
- b) Create HTML form which asks to enter server ip, mysql username and password. Write a php script which validates credential which is to be entered into html form and if entered credentials are correct then allow user to create a new database using php script. [08]

OR

Q – 3 Do as Directed

- a) Explain following PHP array functions with example [06]
 a) array_combine() b) array_shift() c) array_flip()
- b) Define class Product that holds information about products: name, quantity and price. [08]
 Define constructor for the class Product that takes product name, quantity and price as parameters. Create another class Order that holds information about product with category name and description. Define constructor for Order class that takes category name and description along with product name, quantity and price. Add a method in the class Order for displaying all information about the products. Create two products and print their order information.

SECTION – II**Q - 4 Do as Directed**

- a. Match the following: [06]
- | | |
|----------------|---|
| a) Include() | i. Access static variable or constant from outside of class |
| b) :: parent | ii. produce a fatal error (E_COMPILE_ERROR) and stop the script |
| c) __call() | iii. produce a warning (E_WARNING) and the script will continue |
| d) Require() | iv. To call variable or function |
| e) A :: \$str | v. Access constant variable within class |
| f) Self :: str | vi. handle calls to undeclared method |
| | vii. To access super class's constructor |
- b. How to send value of variable from one page to another page using querystring? [01]

Q – 5.a What is XSD? Explain with example. What are the benefits of XSD over DTD? [06]

Q – 5.b Answer the following questions [Any Two]. [08]

- (i) Define XSLT. Explain various tags of XSLT.
- (ii) Differentiate between xml and html. What is well formed and valid xml?
- (iii) What is web service? How does it differ than web application? How many types of the web service are created?

Q – 6. Do as Directed

- a) What are the advantages of using MVC architecture in project development? Write a short note on Yii framework. [06]

- b) Write an XML code for following DTD file. [08]

```
<!DOCTYPE CATALOG [
<!ELEMENT CATALOG (PRODUCT+)>
<!ELEMENT PRODUCT (SPECIFICATIONS+, OPTIONS?, PRICE+, NOTES?)>
<!ELEMENT SPECIFICATIONS (#PCDATA)>
<!ELEMENT OPTIONS (#PCDATA)>
<!ELEMENT PRICE (#PCDATA)>
<!ELEMENT NOTES (#PCDATA)>

<!ATTLIST PRODUCT NAME CDATA #IMPLIED>
<!ATTLIST PRODUCT CATEGORY (HandTool | Table | Shop-Professional)
"HandTool">
<!ATTLIST SPECIFICATIONS WEIGHT CDATA #IMPLIED>
<!ATTLIST OPTIONS FINISH (Metal | Polished | Matte) "Matte">
<!ATTLIST PRICE SHIPPING CDATA #REQUIRED>
]>
```

OR

Q – 6. Do as Directed

- a) Write a php script for following tasks: [06]
- 1) List all the databases on button click.
 - 2) Create table with four fields.
 - 3) Insert one record into table.

- b) Write an xml code for following xml schema file. [08]

```
<?xml version="1.0"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema">

<xs:element name="order-process">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="product_id" type="xs:integer"/>
      <xs:element name="product_name" type="xs:string"/>
      <xs:element name="quantity" type="xs:integer"/>
      <xs:element name="payment" type="xs:decimal"/>
      <xs:element name="description" type="xs:string"/>
    </xs:sequence>
    <xs:attribute name="status" type="xs:string" default="In-Process"/>
    <xs:attribute name="category" type="xs:string" use="Required"/>
    <xs:attribute name="language" type="xs:string" fixed="ENG"/>
  </xs:complexType>
</xs:element>
</xs:schema>
```
