| Q.5 | “Mode of Entry in to International Market must be carefully chosen”. Examine the given statement by defining Modes of international entry. Also, discuss in detail any 4 modes of international entry with their advantages and dis-advantages. | 10 |
| Q.6 | Case Study / Case-let: | 15 |

We all know that in a foreign culture, one of the most important skills to develop is the ability to translate, to learn to speak the new language — or at least master a few key phrases. You also need to learn to translate your behaviour so you don’t end up making cultural faux pas. But one of the most critical (and also most underappreciated) aspect of translation, and the one that we both believe gets companies into the most trouble when operating globally, is the translation of corporate systems, processes, and procedures — in other words, the nuts and bolts of how corporations actually do business in today’s globalized world.

You've undoubtedly heard of individual people making mistakes with language or cultural rules and rituals when operating abroad, but you may not be as familiar with cultural gaffes at the organizational level, where companies fail, often mightily, to transfer the basics of their business practice into the new cultural logic of a foreign environment and end up suffering the consequences.

In large markets, it's common for one person to occupy one job function, but in smaller markets, an individual may have two or even three roles at a time, based on market needs and the amount of work required. Implementing a common structure across all markets meant adding new people and costs in some of the smaller markets, like Costa Rica and Guatemala, and requiring one person to report into multiple people at headquarters. This meant they spent more of their time and focus providing updates to multiple bosses, rather than delivering results locally. By failing to understand the financial realities of smaller markets, as well as what the business in those markets required in terms of structure, and incorporating these dynamics from the beginning of the conversation about converting to a global structure, the actions taken were not useful and did not yield positive results for the organization.
