

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY (CHARUSAT)

Master of Business Administration (MBA)

Post Graduate Diploma in Management (PGDM)

Semester –IV University Examination – May - 2018

MB836.3 Human Resource Information System

17/05/2018, Thursday Time: 10:00 AM to 1:00 PM Maximum Marks: 70

Instructions:

1. This paper contains six questions, of which the last one is a case analysis.
2. All the questions are compulsory.
3. Each of the first five questions will carry 10 marks and the last case analysis will carry 20.

Q-1 “Human Resource Management needs HRIS for a smooth functioning of an organisation. Hence HRIS is not a cost it’s an investment.” **Comment and Justify your stand.** **10**

Q-2 You have been asked to create an applicant database for a small recruiting firm that specializes in recruiting HR professionals for small to medium firms. Describe the process and requirements /fields that you would use to design this database. **10**

Q-3 Case-Let # 1 **10**

DHL is the world’s largest international logistics company that offers its expertise in express, air and freight, contract logistics solutions and international mail services with worldwide coverage. With over 300,000 employees across 220 countries, leave & absence management is one of the key improvements after using EmployeeConnect hosted HR services. In 2008 before using EmployeeConnect hosted HR services, DHL Supply Chain division’s employees applied for leave by filling paper forms. “Our employees applied for leave by filling forms that were then sent to Malaysia payroll office for approval, such vague and lengthy process totally frustrated HR and payroll staff. It also incurred lots of leave liabilities. Leave records could not be traced without an online leave application.” said Jitin Patel, the Remuneration Consultant in DHL Supply Chain division.

Without a centralized leave application solution for 1,450 employees, those application forms exhausted and upset DHL Supply Chain office, and especially frustrated their payroll bureau in Malaysia. In late 2008, DHL Supply Chain chose EmployeeConnect to provide hosted HR services which totally changed the company’s operation. EmployeeConnect reduced the cost of managing the leave application and enabled managers to focus more on projects and businesses with higher value-add. EmployeeConnect hosted HR services enables managers to check the employees leave balance easily. By knowing employee’s schedules, it enables better resources allocation and most importantly, minimizes the leave liabilities. The payroll bureau can also login to check the employees’ leave records.

In view of the above case-let; compare the work culture of DHL Supply Chain Division for pre and post implementation of EmployeeConnect in the organisation.

Q-4 Suppose that, you have been appointed as an ERP consultant to ABM, Rajasthan, which is a well- known university. They have decided to implement an ERP system in the university. Design a complete educational HRIS - ERP package consists of 500 teaching and, and 200 non-teaching and support staff. **10**

Q-5 Case-Let # 2 **10**

Jenny was getting frustrated. With only a few employees, the company kept a paper-based file for each employee with personal information, benefits forms, and so on. She and Peter had decided to outsource payroll, but she still had to spend several hours every two weeks gathering payroll information, such as regular hours, overtime hours, vacation time and sick time that had been taken, and so on, to send to the payroll company.

The benefits information and calculations were supposed to be carried out by the payroll company, but there had been several instances where mistakes had been made. Jenny and Peter discussed the issue and decided that as a high-tech company, they should investigate the possibility of computerizing their employee files and information. Even with a very small

number of employees, they both thought it might be easier for them to use some sort of HRIS.

In view of the above case-let answer the following:

- a) What data should be stored for each employee? How would the company use these data?
- b) Would you recommend an HRIS – Payroll System to Jenny and Peter? If so, explain in detail.

Q-6 Case-Let # 3

20

Meddevco is a large multinational corporation that operates in the medical device sector. The firm employs around 33,000 people in five divisions and has operations in 120 countries. A total of 66% of the multinational's revenue is generated from products that are less than 2 years old. These figures illustrate the highly competitive and fast paced nature of the medical devices sector. This sector is also characterized by high levels of regulatory control and a need to comply with industry norms. Meddevco is headquartered in the United States and Switzerland. The information needs of a firm of this size are substantial, and it would be next to impossible to collect, store and analyse HR- related information without use of a fully integrated global HRIS. Moreover, the diversity of the workforce, the multiplicity of skills required in the different divisions and product lines, and the pressure of compliance necessitate a perfectly arranged Training and Development (T & D) effort. HRIS T & D applications play a major role in managing the T & D function. Meddevco uses an HRIS by PeopleSoft (now Oracle) to manage the majority of its global processes, including e-recruitment and performance appraisals. With regard to data entry into the system. In the United States, most HR services are center in Europe and negotiations are ongoing to implement a European HR shared services model. The company uses a number of different payroll systems in European HR shared services model. The company uses a number of different payroll systems in Europe for compliance reasons. All employees in the corporation have access to a company intranet called My Meddevco, which also includes a learning portal that provides access to online training programs, which employees can use at work and at home. The intranet also includes a knowledge base and detailed company information, including a full listing of all employees and their job titles and location. Employee transfer and promotions are also listed. Years ago, the corporation made the decision not to use the training module included in PeopleSoft and opted for a training management system called SABA to coordinate and manage training initiatives; for example, the recent rollout and training for the use of SAP (an ERP system) for production facilities was managed through SABA. In addition, Meddevco has recently commenced using the talent management module included in PeopleSoft to identify and track high performing employees for promotion. Every employee is required to complete an online talent profile, which is similar to an online CV and which can be updated by the employee. The combination of systems and applications and the careful analysis of HR information contained therein allow the organisation to develop and implement a global T & D strategy. However, the firm also faces some challenges arising from the use of these systems. As the organisation largely grew through acquisition, a number of legacy systems still coexist with the global HRIS among some of its subsidiaries. Data compatibility issues also derive from the use of SABA, which is not part of PeopleSoft. In addition, the firm is also using SAP, and it is questionable whether Oracle (the owner of PeopleSoft) will support data exchanges with a system supplied by its chief competitor. Furthermore, because Meddevco did not involve the workforce in the implementation process of the TMS, employees are reluctant to complete their talent profiles. Moreover, the need to customize the HRIS locally to comply with national legislation in its subsidiaries further complicates the collection and transfer of data within the global HRIS.

Based on the above case study answer the following:

- (a) Analyse the given case and advice, what should Meddevco have done to avoid some of their problems.
- (b) How could Meddevco now solve the problems created by not involving employees during implementation of the HRIS? What else should Meddevco do now to improve the operation of their system?
