- (a) Subdural hematoma
 - (b) Increase intracranial pressure
 - (c) Epidural hematoma
 - (d) Increased blood pressure
- IX. Diabetes insipidus results from
- (a) Hypo secretion of insulin
 - (b) Hyper secretion of insulin
 - (c) Hypersecretion of ADH
 - (d) Hyposecretion of ADH
- X. ECG in hyperkalemia shows :
- (a) Pathological Q waves
 - (b) Long R waves
 - (c) Short PR interval
 - (d) Tall T waves
- XI. The American Heart Association recommended energy dose for defibrillation in ventricular fibrillation using a biphasic defibrillator is;
- (a) 200 J
 - (b) 400 J
 - (c) 150 J
 - (d) 300 J
- XII. Which types of injury is painless? ;
- (a) Superficial Partial Thickness
 - (b) Deep partial Thickness
 - (c) Full thickness
 - (d) All of the above
- XIII. Which solution is appropriate for bladder irrigation?
- (a) Glucose Solution 5%
 - (b) Boric Acid 2%
 - (c) Acriflavin 1 in 10,000
 - (d) All of Above
- XIV. When performing an assessment of renal function, a normal BUN-to-creatinine ratio is
- (a) > 20:1
 - (b) < 20:1
 - (c) < 5:1
 - (d) > 5:1
- XV. A 47 year old man with liver failure who has developed ascites. The nurse understands that ascites is due to
- (a) Dehydration
 - (b) Protein deficiency
 - (c) Bleeding disorders
 - (d) Vitamin deficiency
