

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
First Semester of B. Pharm. Examination
University Theory Examination March-April -2018
BPH1004T PHARMACEUTICAL INORGANIC CHEMISTRY

Date: 29/03/2018, Thursday

Time: 10:00 a.m. to 01:00 p.m.

Maximum Marks: 75

Instructions:

1. There are three sections in this question paper.
 2. SECTION – I comprises of Question 1. Total marks for Section 1 are 20. There are 20 sub-questions (MCQ type). Answers to SECTION – I are to be given in Answer Sheet for MCQ type questions provided to you. Maximum time allotted for SECTION – I is 30 minutes. Answers to SECTION – I must be written during the first 30 minutes of the examination.
 3. Answers to SECTION – II and SECTION – III are to be provided in separate Main Answer Books provided to you.
 4. Figures to right indicate marks.
 5. Draw neat labeled sketches wherever necessary.
-

SECTION - I

- | | | |
|------------|---|-----------|
| Q 1 | Attempt all questions. Each question is of one mark. | 20 |
|------------|---|-----------|
-
- | | | |
|---|--|--|
| 1 | Which radioisotope is used in treatment of leukemia?
[A] ^{131}I
[B] ^{32}P
[C] ^{60}Co
[D] ^{24}Na | |
| 2 | In _____ limit test, we are comparing a color instead of turbidity.
[A] Chloride
[B] Lead
[C] Iron
[D] Sulphate | |
| 3 | Excess use of magnesium sulphate leads to _____.
[A] hypermagnesaemia
[B] gastrointestinal irritations
[C] watery diarrhoea
[D] all of the above | |
| 4 | Concentration of fluoride required for use as anticaries agents orally is _____.
[A] 2%
[B] 6%
[C] 5%
[D] 4% | |
| 5 | α particles are made of
[A] 2 Protons and 1 Neutron
[B] 2 Protons and 2 Neutrons
[C] 1 electron
[D] No charge | |

- 6 One of the following is well in cyanide poisoning.
[A] Sodium nitrate
[B] Sodium Thiosulfate
[C] Sodium nitrate and Sodium Thiosulfate Both
[D] None of above
- 7 The meaning of Cool as per IP is_____ degree temperature range.
[A] 2 to 8
[B] 8 to 25
[C] 25 to 34
[D] More than 45
- 8 The role of citric acid in limit test of iron is
[A] Prevent supersaturation
[B] Complex formation with Fe- Iron metal
[C] Provide a Acidity
[D] Complex Formation with other than Fe-Iron metal
- 9 Calamine is a mixture of
[A] Calcium oxide and zinc oxide
[B] Calcium oxide and ferric oxide
[C] Zinc oxide and ferric oxide
[D] None of the above
- 10 In a modern scintillation counter, screen made by_____.
[A] Zinc sulphide
[B] Sodium Iodide
[C] Sodium iodide and thallium iodide
[D] Zinc sulphide and thallium iodide
- 11 Zinc-Eugenol Cement Consist of EXCEPT
[A] Zinc Acetate
[B] Zinc Sulphate
[C] Zinc Oxide
[D] Zinc Stearate
- 12 _____is not correct for lugol's solution.
[A] Strong Iodine solution
[B] Aqueous Iodine solution
[C] Lack of alcohol in preparation
[D] Contains higher alcohol
- 13 Which of the following are units are used for measurement of radioactivity?
[A] Curie
[B] Roentgen
[C] Electron volts
[D] All of the above
- 14 One of the following has a major role in transmission of nerve impulse.
[A] Sodium
[B] Magnesium
[C] Calcium
[D] None

- 15 _____use as hematinics.
[A] Ferrous sulphate
[B] Ferrous Gluconate
[C] Ferrous fumarate
[D] All of above
- 16 Hydrogen Peroxide is use as;
[A] Acidifiers
[B] Antacids
[C] Cathartics
[D] Anti-infective
- 17 _____use as expectorant in cough preparation .
[A] Sodium pottasium tartrate
[B] Ammonium Chloride
[C] Cooper sulphate
[D] Ammonium bicarbonate
- 18 Antidotes act by producing the effect oppose to that of poison is known as;
[A] Physiological antidotes
[B] Chemical antidotes
[C] Mechanical antidotes
[D] All
- 19 Which radiation has less penetrating power.
[A] Alpha
[B] Beta
[C] Gamma
[D] X-Rays
- 20 Assay of chlorinated lime is based on_____.
[A] Acidimetry- Alkalimetry
[B] Iodimetry
[C] Iodometry
[D] Complexometric

SECTION – II

Q 2 Enlist various methods for detection and determination of radioactivity. Explain Geiger-Muller Counter & Scintillation counter in details. **10**

Q 3 **Attempt any TWO of the following:**

A Discuss methods of preparation and assay of Ammonium Chloride. **05**

B What is Dentifrice? Explain role of fluoride in the treatment of dental caries. **05**

C Enlist various application of radioactive substance in diagnosis and pharmaceuticals. **05**

SECTION – III

Q 4 **Attempt any ONE of the following:**

A What is antimicrobial agent? Discuss mechanism of action of it. **10**

B Write a note on pharmacopoeia and mention contents of official monograph. **10**

Q 5 **Attempt any FIVE of the following:**

A What is antacid? List out ideal properties of antacids. **05**

B Enlist sources of impurities in pharmaceutical substances. Explain any one in detail. **05**

C Discuss methods of preparation and uses of ferrous sulphate. **05**

D Outline the uses and assay of Copper Sulphate. **05**

E Explain function of Calcium gluconate and Oral Rehydration Salt (ORS) **05**

F Define the terms: (1) Expectorants, (2) Haematinics, (3) Buffer (4) Astringent and (5) Antidote **05**
