2. Logic is the formal science of using reason.
3. Creating is the lower level of cognitive development.
4. When we rely on reason and logic in order to solve a problem we are thinking critically.
5. Moral reasoning determines whether an idea is right or wrong.

Q.5 Study the following Case and answer the questions given below it: **10**

You are the District Collector for Anand District. You have just been notified that a truck loaded with Liquid Chlorine has met an accident and overturned on road surrounded by the crowded area. The temperature today is 45 degrees and the wind is blowing from the northeast at 10 miles per hour. You are not sure if the truck container is leaking but need to make a decision to evacuate the area under a possible chlorine plume.

1. What will be your immediate reaction to this emergency? How will you analyse the situation before taking any action?
2. Which steps will be taken by you to avoid disaster?

Q.6 Read the following situation carefully and answer the question given below it. **05**

You are a relief pharmacist at an independent pharmacy. A patient walks into the pharmacy and asks for Robitussin Cough and Cold. You cannot find the Robitussin Cough and Cold in the OTC section of the pharmacy. While scanning the OTC shelves, you realize there are no products containing dextromethorphan (**DXM** is an ingredient in more than 125 non-prescription cough and cold medications) available. You call the pharmacy manager to ask where the dextromethorphan-containing products are. The manager states that dextromethorphan is a potentially harmful medication and should not be available to patients without counselling from the pharmacist. The manager stresses to only give the Robitussin to the patient if he really needs it, to counsel him on the risks, and to sell him just one bottle.

1. Will you sell one bottle of Robitussin Cough and Cold to the patient? Give a logical reason for your answer.
