

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY
5th Semester of B. Pharm. Examination (New)
University Theory Examination November/December 2016
PH315 - Pharmacology-III

Date: 28-11-2016, Monday

Time: 10.00 AM to 1.00 PM

Maximum Marks: 80

Instructions:

1. There are three sections in this question paper.
2. SECTION – I comprises of Question 1. Total marks for Section 1 are 20. There are 20 sub-questions (MCQ type). Answers to SECTION – I are to be given in Answer Sheet for MCQ type questions provided to you. Maximum time allotted for SECTION – I is 30 minutes. Answers to SECTION – I must be written during the first 30 minutes of the examination.
3. Answers to SECTION – II and SECTION – III are to be provided in separate Main Answer Books provided to you.
4. Figures to right indicate marks.
5. Draw neat sketches wherever necessary.

SECTION – I

Q.1 Attempt all questions. Each question is of one mark.

20

1. Generalized epilepsy is characterized by
 - A. Confused behaviour and abnormal activity
 - B. Loss of consciousness associated with tonic clonic convulsion
 - C. Jerking of limb depending upon area of cortex affected
 - D. Slow tendon reflexes, jerking of entire body
2. The positive symptoms associated with schizophrenia are
 - A. Withdrawal from social contact, flattering emotional response
 - B. Low self esteem, feeling guilt, loss of libido
 - C. Delusion, hallucination, irrational conclusion, abnormal behaviour
 - D. Sleep disturbances, bipolar symptoms
3. What is major toxicity of Halothane?
 - A. Bone marrow depression
 - B. Anaemia
 - C. Psychotic syndrome, extra pyramidal side effects
 - D. Hepatitis, malignant hyperthermia
4. CNS effects of Barbiturates are
 - A. Disorientation of judgement, impair vigilance, attention to external stimuli, increase pain sensation
 - B. Cognitive decline, memory deficit
 - C. Mental retardation, slow tendon reflexes, hypothyroidism
 - D. Alterations in dopamine and 5-HT
5. One of the following is the example of Calcium channel blocker drug
 - A. Nitrate
 - B. Mepyramine
 - C. Methyldopa
 - D. Verapamil

6. Mechanism of action of ACE inhibitor is
 - A. Produce oedema
 - B. Blocking formation of angiotensin ii
 - C. Increase preload
 - D. Blocking renal blood flow
7. The main mechanism of Class I antidysrhythmic drug is
 - A. Beta blocking effect
 - B. Blocking calcium channels
 - C. Blocking potassium channels
 - D. Blocking sodium channels
8. Which of the following drug that release dopamine from brain?
 - A. Chlorpromazine
 - B. Selegiline
 - C. Amantadine
 - D. Buspirone
9. Predominant action of sulpiride on which type of receptor in human body?
 - A. D1 receptor
 - B. D2 receptor
 - C. Alpha adrenergic receptor
 - D. H1 receptor
10. One of the following is an example of newer class antiepileptic drug?
 - A. Tiagabine
 - B. Phenytoin
 - C. Valproate
 - D. Ethosiximide
11. Main pharmacological action of MAO inhibitors are
 - A. Rapid release of cytokines and reduced inflammation
 - B. Rapid and sustained release in 5-HT, noradrenaline and dopamine
 - C. Reduction in anxiety & aggression
 - D. Reduction in muscle tone & coordination
12. Paracetamol produces its analgesic effect by acting through the enzyme.
 - A. Cyclo oxygenase-3
 - B. Mono amine oxygenase
 - C. Oxidase
 - D. Alanine transaminase
13. The main pharmacological actions of Amphetamine are
 - A. Locomotor stimulation
 - B. Euphoria and excitement
 - C. Stereotyped behaviour and anorexia
 - D. All of above
14. What are the major side effects of captopril?
 - A. Rashes, taste disturbances, neutropenia, proteinuria
 - B. Low Hb, low RBC, vasoconstriction
 - C. Tachycardia, increased preload
 - D. Monday morning sickness, hypotension, headache
15. Clinical uses of Organic nitrates are
 - A. Arrhythmia and hypertension
 - B. Hyperlipidemia and hypotension
 - C. Stable angina & Myocardial infarction
 - D. Pulmonary oedema & cardiac hypertrophy

16. Mechanism of Aspirin as antiplatelet agent is
 - A. Inhibits fibrates & improve coagulation cascade
 - B. Inhibition of lipoxigane pathways
 - C. Increase iron turn over and balance
 - D. Inhibits cyclo oxygenase irreversibly and balance between Prostaglandin and thromboxane
17. Clinical use of Angiotensin-II receptor antagonists are
 - A. Hypertension and hypertensive diabetic patient
 - B. Heart failure
 - C. Diabetic nephropathy
 - D. All of above
18. Mechanism of action of STATIN is
 - A. Inhibiting cholesterol absorption
 - B. Inhibiting HMG-CoA reductase enzyme
 - C. Improvement in Cardiotoxicity
 - D. Reduced pre & after load on heart
19. One of the following is not a lipid lowering drug
 - A. Lovastatin
 - B. Ciprofibrate
 - C. Gemfibrozil
 - D. Terfenadine
20. Main action of heparin is
 - A. Low cardiac output
 - B. Activates clotting factors Xa, IIa, IXa
 - C. Activates plasma antithrombin III
 - D. Increase iron turn over and balance

SECTION – II

Q 2 Attempt any TWO of the following

- | | | |
|---|--|----|
| A | Describe the brief pharmacology of Antihypertensive drugs. | 05 |
| B | Write a detail note on Antiarrhythmic drugs. | 05 |
| C | Write a short note on Immunostimulant and Immunosuppressant drugs. | 05 |

Q 3 Attempt any TWO of the following

- | | | |
|---|--|----|
| A | Classify Anti-hyperlipidemic drugs. Compare and contrast Statins and Fibrates | 05 |
| B | Classify Antiplatelet and Anticoagulant drugs with their clinical uses. | 05 |
| C | Define hematinic drugs with examples. Classify Cardiac glycosides and other Cardiotonic drugs. Provide side effect profile of digoxin. | 05 |

SECTION – III

Q 4 Attempt any FOUR of the following

- | | | |
|---|---|----|
| A | Explain pathogenesis of epilepsy and classify antiepileptic agents with examples. | 05 |
| B | Explain in detail about pharmacology of Alcohol. | 05 |
| C | What are general anaesthetics? Describe various stages of general anaesthesia. | 05 |
| D | Classify NSAIDs and provide clinical uses of analgesic drugs. | 05 |
| E | Write a detail note on Diuretics. | 05 |
| F | Classify sedatives and hypnotic agents. Explain mechanism of action and therapeutic uses of benzodiazepine. | 05 |

Q 5 Attempt any FOUR of the following

- | | | |
|---|---|----|
| A | Classify CNS stimulants & explain any one agent in brief. | 05 |
| B | Explain pathogenesis of parkinsonism. Write a note on levodopa. | 05 |
| C | Explain pathogenesis of depression. Classify antidepressant agents. | 05 |
| D | Provide a brief pharmacology and side effect profile of Antipsychotic drugs. | 05 |
| E | Classify Opioid analgesics and provide brief pharmacology of morphine. | 05 |
| F | Classify antianginal drugs. Explain any one class of antianginal drug in detail | 05 |
-
