

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

6th Semester of B. Pharm. Examination (New)

University Theory Examination May 2017

PH321 - Pharmacology-IV

Date: 05/05/2017, Friday

Time: 10.00 AM to 1.00 PM

Maximum Marks: 80

Instructions:

1. There are three sections in this question paper.
 2. SECTION – I comprises of Question 1. Total marks for Section 1 are 20. There are 20 sub-questions (MCQ type). Answers to SECTION – I are to be given in Answer Sheet for MCQ type questions provided to you. Maximum time allotted for SECTION – I is 30 minutes. Answers to SECTION – I must be written during the first 30 minutes of the examination.
 3. Answers to SECTION – II and SECTION – III are to be provided in separate Main Answer Books provided to you.
 4. Figures to right indicate marks.
 5. Draw neat sketches wherever necessary.
-

SECTION – I

Q.1 Attempt all questions. Each question is of one mark.

20

1. Following drug interferes with complex of peptide formation and induce misreading of code on mRNA
 - A. Ampicillin
 - B. Tetracycline
 - C. Streptomycin
 - D. Chloramphenicol
2. Which of the following Quinolone compound discovered first in 1960s?
 - A. Norfloxacin
 - B. Nalidixic acid
 - C. Gentamycin
 - D. Ofloxacin
3. Jerisch Herxheimer reaction is one of the side effect of which class of drug?
 - A. Cephalosporine
 - B. Aminioglycosides
 - C. Penicillin G
 - D. Antiviral drugs
4. Which phase is considered as Asexual cycle in human or exo-erythrocytic phase in malarial infection?
 - A. gametogony
 - B. schizogony
 - C. sporogony
 - D. none of above
5. Glucagon like peptide-1 (GLP-1) suppress the secretion of
 - A. Glucose
 - B. Insulin
 - C. Somatostatin
 - D. Glucagon

6. The following glucocorticoid has significant mineralocorticoid activity also
 - A. Hydrocortisone
 - B. Triamcinolone
 - C. Dexamethasone
 - D. Betamethasone
7. Mechanism of action of Cytarabine is
 - A. inhibit purine synthesis
 - B. inhibits adenosine deaminase
 - C. inhibition of DNA polymerase and inhibition of RNA function
 - D. inhibits protein synthesis
8. The insulin receptor is a
 - A. Ion channel regulating receptor
 - B. Tyrosine protein kinase receptor
 - C. G-protein coupled receptor
 - D. Steroidal receptor
9. One of the following is a DNA polymerase inhibitor
 - A. Zidovudine
 - B. Docosanol
 - C. Gancyclovir
 - D. Indinavir
10. One of the following drug binds with nucleoproteins and inhibits host RNA and DNA.
 - A. Pyrimethamine
 - B. Chloroquine
 - C. Mefloquine
 - D. Primaquine
11. The common adverse effects of acyclovir are
 - A. local irritation, transient burning on genital lesion, rare incidence of phlebitis diaphoresis
 - B. low hemoglobin, haematocrit, transient reversible elevation in total serum SGOT, SGPT
 - C. rash, weakness, thrombophlebitis
 - D. anaemia, macrocytosis, insomnia, lethargy
12. Which of the following drugs is an antiprogestin?
 - A. Gemeprost
 - B. Mifepristone
 - C. Megestrol
 - D. Tamoxifen
13. Identify the drug having following characteristics: it bind tightly to dihydrofolate reductase, pseudo-irreversible compound, because of its action folic acid cannot be converted into folinic acid.
 - A. Methotrexate
 - B. 6-mercaptopurine
 - C. Cyclophosphamide
 - D. Vincristine
14. Mechanism of action of Metronidazole is
 - A. it inhibits replication of RNA enterovirus
 - B. Inhibition of DNA synthesis resulting into loss of DNA strand breakage and impairment of its function
 - C. it destroys microtubules
 - D. it may cause miscoding and destruction of guanine, disruption of nucleic acid

15. What are the adverse effects of Ketoconazole?
 - A. epigastric pain, peripheral neuritis, blurred vision, proteinuria
 - B. Inhibits steroid biosynthesis, irregular menstruation, gynecomastia, azoospermia, cushing's syndrome
 - C. hypokalemia, hallucination, psychoses, ataxia, tremor
 - D. anaemia, macrocytosis, reversible elevation in total serum SGOT, SGPT
16. Which drug is phosphorylated into deoxynucleoside triphosphate derivative, competes with formation of viral DNA by viral transcriptase?
 - A. Mefloquine
 - B. Zidovudine
 - C. Ritonavir
 - D. Interferone
17. Oxytocin is essential for
 - A. Fertility
 - B. Contraception
 - C. Milk ejection reflex
 - D. Ovulation
18. Bone resorption is accelerated by
 - A. Estrogens
 - B. Bisphosphonates
 - C. Parathormone
 - D. Calcitonin
19. Following is a selective estrogen receptor modulator
 - A. Danazol
 - B. Clomiphene
 - C. Tamoxifen
 - D. Letrozole
20. The drug of choice for hypoparathyroidism is
 - A. Parathormone
 - B. Calcium lactate
 - C. Vitamin D
 - D. Pamidronate

SECTION – II

Q 2 Attempt any TWO of the following

- | | | |
|---|--|----|
| A | Provide a brief note on Chemotherapy of Tuberculosis | 05 |
| B | Explain pathogenesis of HIV infection in short. Classify Antiviral drugs in detail | 05 |
| C | Provide a short pathogenesis of cancer. Classify Anticancer drugs. Explain Antimetabolites in short. | 05 |

Q 3 Attempt any TWO of the following

- | | | |
|---|--|----|
| A | Explain life cycle of Malaria. Classify antimalarial drugs along with its pharmacology | 05 |
| B | Write a short note on antiamoebic drugs and Quinolones. | 05 |
| C | Provide a short note on Antifungal drugs. Enlist side effects associated with anticancer drugs | 05 |

SECTION – III

Q 4 Attempt any FOUR of the following

- | | | |
|---|--|----|
| A | Classify oral hypoglycemic agents. Explain pharmacology of sulphonylureas. | 05 |
| B | Give classification and mechanism of action of drugs used in treatment of hyperthyroidism. | 05 |
| C | Describe pharmacology of oral contraceptives. | 05 |
| D | Explain the pharmacological actions and use of calcitonin OR Parathyroid hormone. | 05 |
| E | Classify sulphonamides. Add a note on co-trimoxazole. | 05 |
| F | Give classification, mechanism of action and uses of Penicillins. | 05 |

Q 5 Attempt any FOUR of the following

- | | | |
|---|--|----|
| A | Classify antiestrogens. Describe Selective Estrogen Receptor Modulators in detail. | 05 |
| B | Explain the pharmacology of oxytocic agents. | 05 |
| C | Discuss the pharmacological actions and uses of glucocorticoids. | 05 |
| D | Explain the pharmacological actions of aldosterone and growth hormone in brief. | 05 |
| E | Describe the mechanism and pharmacology of Tetracycline in detail. | 05 |
| F | Write mechanism of action and uses of the following: | 05 |
| | (a) Cefuroxime | |
| | (b) Azithromycin | |
-
