# ACADEMIC RULES

To ensure uniform system of education, duration of under graduate programmes, eligibility criteria for and mode of admission, credit load requirement and its distribution between course and system of examination and other related aspects, following academic rules and regulations are recommended.

## 1. System of Education

The Semester system of education should be followed across the Charotar University of Science and Technology (CHARUSAT) at Master's levels. Each semester will be at least 90 working days duration. Every enrolled student will be required to take a specified load of course work in the chosen course of specialization and also complete a project/dissertation if any.

## 2. Duration of Programme

| <b>Undergraduate Programme</b> | <b>Bachelor of Computer Applications(BCA)</b> |
|--------------------------------|-----------------------------------------------|
| Minimum                        | 6 Semesters (3 Academic years)                |
| Maximum                        | 10 Semesters (5 Academic years)               |

## 3. Eligibility & Mode of Admissions

Eligibility of a candidate and mode of admission to the programme will be according to the regulations for admission committee decided by Government of Gujarat from time to time.

## 4. Programme structure and Credits

A student admitted to a program should study the course and earn credits specified in the course structure.

## **5. Attendance**

- 5.1 All activities prescribed under these regulations and listed by the course faculty members in their respective course outlines are compulsory for all students pursuing the courses. No exemption will be given to any student from attendance except on account of serious personal illness or accident or family calamity that may genuinely prevent a student from attending a particular session or a few sessions. However, such unexpected absence from classes and other activities will be required to be condoned by the Dean/Principal.
- 5.2 Student attendance in a course should be 80%.

## **6. Course Evaluation**

- 6.1 The performance of every student in each course will be evaluated as follows:
- 6.1.1 Internal evaluation by the course faculty member(s) based on continuous assessment, for 30% of the marks for the course; and
  - 6.1.2 Final examination by the University through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these, for 70% of the marks for the course.
- 6.2 University Examination
- 6.2.1 The final examination by the University for 70% of the evaluation for the course will be through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these.
  - 6.2.2 In order to earn the credit in a course a student has to obtain grade other than FF.
  - 6.2.3 Performance at Internal & University Examination will be done on the relative grading system.

## **7. Grading**

The student's performance in any semester will be assessed by the Semester Grade Point Average (SGPA). Similarly, his performance at the end of two or more consecutive semesters will be denoted by the

Cumulative Grade Point Average (CGPA). The SGPA and CGPA are defined as follows:

### ***Grading Scheme***

| <b>Range of Marks (%)</b> | <b>≥80</b> | <b>≥75<br/>&lt;80</b> | <b>≥70<br/>&lt;75</b> | <b>≥65<br/>&lt;70</b> | <b>≥60<br/>&lt;65</b> | <b>≥55<br/>&lt;60</b> | <b>≥50<br/>&lt;55</b> | <b>&lt;50</b> |
|---------------------------|------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|---------------|
| <b>Letter Grade</b>       | <b>AA</b>  | <b>AB</b>             | <b>BB</b>             | <b>BC</b>             | <b>CC</b>             | <b>CD</b>             | <b>DD</b>             | <b>FF</b>     |
| <b>Grade Point</b>        | <b>10</b>  | <b>9</b>              | <b>8</b>              | <b>7</b>              | <b>6</b>              | <b>5</b>              | <b>4</b>              | <b>0</b>      |

$SGPA = \sum C_i G_i / \sum C_i$       where  $C_i$  is the number of credits of course  $i$   
 $G_i$  is the Grade Point for the course  
 $i$  and  $i = 1$  to  $n$ ,  $n$  = number of courses in the semester

$CGPA = \sum C_i G_i / \sum C_i$       where  $C_i$  is the number of credits of course  $i$   
 $G_i$  is the Grade Point for the course  
 $i$  and  $i = 1$  to  $n$ ,  $n$  = number of courses of all semesters  
up to which CGPA is computed.

### **8. Detention Rule**

A student will be promoted to next year only if he/she has cleared all the courses of the year he/she is studying in. Awards of Degree.

8.1 Every student of the programme who fulfils the following criteria will be eligible for the award of the degree:

8.1.1 He should have earned at least minimum required credits as prescribed in course structure; and

8.1.2 He should have cleared all evaluation components in every course; and

8.2 The student who fails to satisfy minimum requirement of CGPA will be allowed to improve the grades so as to secure a minimum CGPA for the award of degree. Only latest grade will be considered.

## 9. Award of Class

The class awarded to a student in the programme is decided by the final CGPA as per the following scheme:

|                      |                                                               |
|----------------------|---------------------------------------------------------------|
| <b>Distinction:</b>  | <b>CGPA <math>\geq 7.5</math> &amp; <math>\leq 10</math></b>  |
| <b>First class:</b>  | <b>CGPA <math>\geq 6.0</math> &amp; <math>&lt; 7.5</math></b> |
| <b>Second Class:</b> | <b>CGPA <math>\geq 5.0</math> &amp; <math>&lt; 6.0</math></b> |
| <b>Pass Class:</b>   | <b>CGPA <math>&lt; 5.0</math></b>                             |

## 10. Transcript

The transcript issued to the student at the time of leaving the University will contain a consolidated record of all the courses taken, credits earned, grades obtained, SGPA, CGPA, class obtained, etc.

## **CHOICE BASED CREDIT SYSTEM**

The choice based credit system provides flexibility in designing curriculum and assigning credits based on the course content and hour of teaching. The choice based credit system provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective and open elective courses. The CBCS provides a cafeteria type approach in which the students can take courses of their choice and adopt an interdisciplinary approach to learning. The courses shall be evaluated on the grading system, which is considered to be better than the conventional marks system.

### **CBCS – Conceptual Definitions / Key Terms (Terminologies)**

Types of Courses: The Programme Structure consist of 3 types of courses:

Foundation Courses, Core Courses and Elective Courses.

#### **Foundation Course**

These courses are offered by the institute in order to prepare students for studying courses to be offered at higher levels.

#### **Core Courses**

A Course which shall compulsorily be studied by a candidate to complete the requirements of a degree / diploma in a said programme of study is defined as a core course. Following core courses are incorporated in CBCS structure:

##### **A. University Core Courses(UC):**

University core courses are compulsory courses which are offered across university and must be completed in order to meet the requirements of programme.

### **B. Programme Core Courses(PC):**

Programme core courses are compulsory courses offered by respective programme owners, which must be completed in order to meet the requirements of programme.

### **Elective Courses**

Generally, a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline of study or which provides an extended scope or which enables an exposure to some other discipline / domain or nurtures the candidates

proficiency / skill is called an elective course. Following elective courses are incorporated in CBCS structure:

#### **A. University Elective Courses(UE):**

The pool of elective courses offered across all faculties / programmes.

#### **B. Institute Elective Course (IE)**

Institute elective courses are those courses which any students of the University/Institute of a Particular Level (PG/UG) will choose as offered or decided by the University/Institute from time-to-time irrespective of their Programme /Specialization.

#### **C. Programme Elective Courses(PE):**

The programme specific pool of elective courses offered by respective programme.

## **Vision, Mission, PEOs, POs and PSOs**

### **Vision**

To become a leading institution in the field of computer applications and contribute in national efforts of computerizing public systems

### **Mission**

To produce competent computer professionals with the ability to face future challenges.

### **PROGRAM EDUCATIONAL OBJECTIVES (PEOs)**

The graduates will:

**PEO1:** Be able to understand the requirement of computing problem and implement an effective solution.

**PEO2:** Be able to successfully take up various available career options.

**PEO3:** Be able to continuously learn in their preferred domains.

**PEO4:** Be able to acquit themselves in ethical and professional manner while demonstrating effective skills.

### **PROGRAM OUTCOMES (POs)**

The Graduate of Computer Science and Applications will be able to:

**PO1: Computational Knowledge:** Apply knowledge of computing fundamentals, computing specialization, mathematics, and domain knowledge to provide effective solution in the area of computing.

**PO2: Problem Analysis:** Identify, formulate, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.

**PO3: Design /Development of Solutions:** Design and evaluate solutions for computing problems, and design and evaluate systems, components, or processes that meet specified needs by considering several societal aspects.

---

**PO4: Modern Tool Usage:** Create, select, adapt and apply appropriate techniques, resources, and modern computing tools for any computing activities, with an understanding of the limitations.

**PO5: Professional Ethics:** Understand and commit to professional ethics, responsibilities, and norms of professional computing practice.

**PO6: Life-long Learning:** Recognize the need, and have the ability, to engage in independent learning for continual development as a computing professional.

**PO7: Project management:** Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO8: Communication Efficacy:** Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions.

**PO9: Societal and Environmental Concern:** Understand and assess societal and environmental issues within local and global contexts, and the consequential responsibilities relevant to professional computing practice.

**P10: Individual and Team Work:** Function effectively as an individual and as a member or a leader in diverse teams and in multidisciplinary environments.

**P11: Innovation and Entrepreneurship:** Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

## **PROGRAM SPECIFIC OUTCOMES**

At the end of the programme, the student should be able to

**PSO1:** Analyze, evaluate and formulate workable computing solutions to real world problems using computing methods.

**PSO2:** Apply proficiencies of communication, teamwork and management skills with spirit of entrepreneurship.

### **SALIENT FEATURES**

- Four Years unique programme as per National Education Policy-2020.
- Exit option is available after every year (i.e 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup>)
- Award of Degree:
  - **Certificate of Computing** (Candidate wish to Exit after the First Year)
  - **Diploma in Computer Applications** (Candidate wish to Exit after the Second Year)
  - **Bachelor of Computer Applications** (Candidate wish to Exit after the Third Year)
  - **Bachelor of Computer Applications(Honor's)** (Candidate finishes all Four Years)
- Programme is designed based on Choice Based Credit System(CBCS).
- Right blend of fundamentals and latest technologies related courses.
- Exposure of humanities courses in every semester for holistic development of students.
- Interdisciplinary exposure in form of university elective courses.
- Unique methodologies in form of case study and project based learning for teaching-learning.
- Inclusion of environmental awareness through environment science courses.
- Coverage of emerging technologies through expert sessions, seminar and workshop.

**Total Credits of Programme (8 Semesters): 196**

**TEACHING AND  
EXAMINATIONS SCHEME

# CA121: Information Technology Trends

## (100 Marks)

**Contact Hours: 03**

**Pre-requisite: None**

**Methodology & Pedagogy:** During theory lectures emerging trends of information technology will be introduced to students. Emphasis will be given on acquisition, storage and processing of data to generate meaningful information. Students will be made familiar with applications related to information technology. Emerging trends and societal impacts of information technology will be discussed to students.

**Outline of the Course:**

| Unit No. | Title of the Unit                         | Minimum Number of Theory Hours |
|----------|-------------------------------------------|--------------------------------|
| 1        | Information Technology Essentials         | 06                             |
| 2        | Internet Applications                     | 05                             |
| 3        | Internet Service Trends                   | 07                             |
| 4        | Data Analytics Trends                     | 06                             |
| 5        | GPS and GIS Trends                        | 05                             |
| 6        | Emerging Trends and Societal Impact of IT | 07                             |

**Total Hours (Theory): 36**

**Total Hours:36**

**Detail Syllabus:**

### Unit I: Information Technology Essentials

**Hours 06**

Introduction to Information Technology, Acquisition of various types of data- Introduction to Number and Textual Data, Image Data, Audio and Video Data Numbers and Textual Data, Data Storage and organization.

### Unit II: Internet Applications

**Hours 05**

Internet: Introduction, Internet basics, Internet protocols, Internet addressing, Browser WWW, E-mail, telnet, FTP, application, benefits and limitation of internet, electronic conferencing, and teleconferencing.

### Unit III: Internet Service Trends

**Hours 07**

Fundamentals of Cloud Computing, Types of Cloud based Services, Varieties of Cloud Computing, Types of Cloud Computing, Advantages and Disadvantage Cloud Computing, Cloud Computing Providers E-commerce, M-Commerce.

#### **Unit IV: Data Analytics Trends**

**Hours 06**

Types of Data – Qualitative and Quantitative, Data Analytics basics, Types of Analytics, Common technologies used in data analytics, Tools for Data Analytics

#### **Unit V: GPS and GIS Trends**

**Hours 05**

What is GPS, Key uses of GPS, how it is applied, what is GIS, Key Uses of GIS, which industries use GIS, Future of GPS and GIS.

#### **Unit VI: Emerging Trends and Societal Impact of IT**

**Hours 07**

Internet of Things, Virtual and Augmented Reality, Industry 4.0, Image Processing Introduction to Societal Impact, Social Use of World Wide Web, Privacy, Security and Integration of Information, Disaster Recovery, Intellectual Property Right, Career in IT

#### **Core Books:**

1. V Rajaraman : Introduction to Information Technology, 3<sup>rd</sup> Edition, PHI Learning Private Limited, 2018.
2. P.T. Joseph, S.J.: E-Commerce An Indian Perspective, th Edition, PHI Learning Private Limited, 2019.

# CA122: Business Organization and Principles of Management

## (100 Marks)

**Contact Hours: 03.**

**Pre-requisite: None**

**Methodology & Pedagogy:** This syllabus is designed to impart the basic knowledge of major components of Management, namely Planning, Organizing Business in modern era, Staffing, Leading, Controlling using different techniques.

**Outline of the course:**

| Unit No. | Title of the Unit                               | Minimum Number of Hours |
|----------|-------------------------------------------------|-------------------------|
| 1        | Forms of Business Ownership                     | 6                       |
| 2        | Business Services                               | 7                       |
| 3        | Emerging Modes of Business                      | 4                       |
| 4        | Principles of Management                        | 8                       |
| 5        | Business Ethics and Its Social Responsibilities | 4                       |
| 6        | Entrepreneurship Development                    | 7                       |

**Total Hours (Theory): 36**

**Total Hours: 36**

**Detailed Syllabus:**

### **Unit -I: Forms of Business Ownership**

**Hours: 06**

Sole proprietorship, Joint Hindu Family Business – meaning, features, merits and demerits, Partnership – meaning, types, registration, types of Partners, Co – Operative societies – types, merits and limitations, Company – Private Ltd, Public Ltd –merits, limitations, Starting a business – Basic factors, Choice of forms of business organizations.

### **Unit -II: Business Services**

**Hours: 07**

Nature and types of Business services – Banking, Insurance, Transportation, Warehousing, communication.

Meaning, role, Functions of Banking, Insurance, Postal and Telecom services, Warehousing, Transport, Hospitality and Tourism Services.

### **Unit -III: Emerging Modes of Business**

**Hours: 04**

E – business – Meaning, Scope and benefits, Resource required for successful E – Business implementation, On – line transactions, payment mechanism, Security and safety of business transactions, Outsourcing – Concept, need and scope.

**Unit -IV: Principles of Management**

**Hours: 08**

Definition and nature of management, purpose of management, managerial functions at different levels, management- art or science, planning, planning process & purpose, steps of planning, goal setting, decision making, organizing function, organizing process, formal and informal organizations, centralization and decentralization organization, staffing function, staffing process, recruitment, selection, training, performance appraisal, directing function, concepts of leading, motivating, communicating, qualities of leaders, controlling, control process, control techniques.

**Unit -V: Business Ethics and Its Social Responsibilities**

**Hours: 04**

Concept of social responsibility, cases for social responsibility, responsibility towards different interest groups, owners, investors, employees, consumers, government, community, public in general, business ethics – concept and elements, business and environmental protection.

**Unit -VI: Entrepreneurship Development**

**Hours: 07**

The concept and introduction, personality and mindset of an entrepreneur, difference between an entrepreneur, intrapreneur and manager/executive, entrepreneurial eco-system, types and functions of an entrepreneur- entrepreneurial motivation, entrepreneurship development programs, business idea generation, business plan and detailed project report, funding and support aspects.

**Core Books:**

1. Harold Koontz & Heinz Weihrich: Essentials of Management, Ninth Edition, Tata McGraw Hill Publishing, 2012.
2. Dr. F. C. Sharma, Dr. D. Chandra, Anju Agarwal: Business Organization, SBPD Publications, 2020.

**Reference Books:**

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                       |
|--------------|-------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Students will be able to understand different types of business proprietorship.                       |
| <b>CO2 :</b> | Students will get the knowledge of functionality of various online business services.                 |
| <b>CO3 :</b> | Students will learn the important concepts of management.                                             |
| <b>CO4 :</b> | To be able to understand the ethics and social responsibilities of business towards various entities. |
| <b>CO5 :</b> | Students will learn the concepts required to be a good entrepreneur.                                  |

**Course Outcomes Mapping:**

| Unit No. | Unit Name                                       | Course Outcomes |     |     |     |     |

## OCBCA1001: **Business to Business Marketing (B2B)**

### **Description:**

This is course OCBCA1001 – Business To Business Marketing (B2B) is offered from SWAYAM as noc23\_mg120– Business To Business Marketing (B2B).

### **Credit and Week:**

| Teaching Scheme | Week | Marks | Credit |
|-----------------|------|-------|--------|
|                 | 12   | 100   | 3      |

### **About the course:**

Business to Business Marketing (B2B) has been one of the most discussed topics in marketing. It involves all kinds of industries be it manufacturing or service oriented ones. It encompasses small, medium and large industries and creates employment for large number of people. Business organizations have been constantly trying to optimize their processes and products in order to provide better products and services to other firms and thus constant innovation in such organizations has been the norm. With growing technology, better transport facilities and advanced research it has grown at a much faster pace in comparison to others.

This course aims at building a strong theoretical base as well as enhances the learner's knowledge on designing successful business strategies and programs. As a part of this course, case studies from across the globe would be used to bring in an experiential learning among the learners.

### **Pre-requisites:**

12th, the Course will aim at building Fundamentals of Industrial marketing at a Beginner's level

### **Industry support:**

This course will be extremely helpful for anyone who is working in the industry in various capacities. It will be helpful for employees of large companies, Public and Private sector undertakings and SME'S

## Course layout:

**Week 1:** Introduction to B2B Marketing: Business marketing, Classifying goods for the business market, Business market customers, Market structure, Environment and Characteristics of Business Marketing, Strategic role of marketing, Commercial enterprises, Commercial and institutional customers, B2B vs B2C Marketing.

**Week 2:** Organizational Buying and Buyer Behaviour: Organizational buyers' decision process - A Stepwise Model and A Process Flow Model, Organizational and business markets - Government as a customer - Commercial enterprises - Commercial and institutional customers, Value analysis, Buygrid framework, Strategic procurement.

**Week 3:** B2B Marketing Strategy: Strategy making and strategy management process, Industrial product strategy– Managing Products for Business Markets-Managing Services for Business Markets-Managing Business Market channels The Growth-Share Matrix, Multifactor Portfolio Matrix, The Balanced Scorecard.

**Week 4:** B2B Marketing STP: Market Segmentation, bases for segmenting business markets, basic framework of segmentation, choosing target segments and positioning.

**Week 5:** Business Marketing Communications- B2B Advertising, Digital marketing,- Trade shows, exhibitions, business meets - Managing the sales force - Deployment analysis, Direct marketing.

**Week 6:** Demand forecasting: industrial market, Forecasting- meaning, importance and relevance, issues related to forecasting, forecasting measurement models, sales force forecasting, estimating segment demand, Collaborative approach to estimate demand, qualitative and quantitative forecasting methods.

**Week 7:** Product management: (existing and new) in industrial market, role of product in the industrial market, new product development, industrial product life cycle, product evaluation matrix, techniques for indentifying new products QFD, perceptual mapping, reverse engineering, fish bone diagram, role of service and maintenance in industrial markets, customer experience life cycle, service quality.

**Week 8:** Pricing: Pricing strategies; The pricing policy; Price on the Internet; Financial marketing, competitive bidding, commercial terms and conditions, role of leasing.

**Week 9:** Buyer seller relationship, types of relationships, transactional and collaborative relationships, influencing industrial customers, role of service in industrial markets. CRM.

**Week 10:** B2B marketing research, challenges in B2B research, developing a marketing information system, role of qualitative research techniques in B2B research.

**Week 11:** Business marketing channels and participants - Channel design and management decisions -B2B logistics management, types of industrial middlemen And intermediaries, marketing logistics and physical distribution.

**Week 12:** Strategic decision making in industrial markets, strategic planning at corporate levels, allocation of resources, portfolio analysis, developing SBU'S objectives and goals, implementing and controlling marketing plan. Marketing through electronic commerce.

### Text Books / Basic Material

1. Business Market Management Understanding, Creating and Delivering Value By James C. Anderson, Das Narayandas, James A. Narus and D.V.R. Seshadri Pearson, 2010 3rd edition
2. Business Marketing Management b2b By Hutt and Speh South-Western CENGAGE, Learning [www.cengagebrain.com](http://www.cengagebrain.com) 2013.
3. B2B Brand Management By Kotler and Pfoertsch Springer [www.springer.com](http://www.springer.com) 2006
4. Business Marketing: Text and Cases By Krishna K Havaldar, McGrawhill Publications, 2014 4th edition.

### Criteria to get a certificate:

Average assignment score = 25% of average of best 8 assignments out of the total 12 assignments given in the course.

Exam score = 75% of the proctored certification exam score out of 100.

Final score = Average assignment score + Exam score.

***YOU WILL BE ELIGIBLE FOR A CERTIFICATE ONLY IF AVERAGE ASSIGNMENT SCORE  $\geq 10/25$  AND EXAM SCORE  $\geq 30/75$ . If one of the 2 criteria is not met, you will not get the certificate even if the Final score  $\geq 40/100$ .***

## OCBCA1002: Privacy and Security in Online Social Media

### Description:

This is course OCBCA1002 – Privacy and Security in Online Social Media is offered from SWAYAM as noc23\_cs13– Privacy and Security in Online Social Media

### Credit and Week:

| Teaching Scheme | Week | Marks | Credit |
|-----------------|------|-------|--------|
|                 | 12   | 100   | 3      |

### About the course:

With increase in the usage of the Internet, there has been an exponential increase in the use of online social media and networks on the Internet. Websites like Facebook, YouTube, LinkedIn, Twitter, Flickr, Instagram, Google+, Foursquare, Pinterest, Tinder, and the likes have changed the way the Internet is being used. However, widely used, there is a lack of understanding of privacy and security issues on online social media. Privacy and security of online social media need to be investigated, studied and characterized from various perspectives (computational, cultural, psychological, etc.). Student completing the course will be able to appreciate various privacy and security concerns (spam, phishing, fraud nodes, identity theft) on Online Social Media and Student will be able to clearly articulate one or two concerns comprehensively on one Online Social Media, this will be achieved by homework.

### Pre-requisites:

Basic / Intermediate programming course. Understanding of Python will be necessary for the course. Should be able to quickly learn APIs, and to collect data from social networks.

### Industry support:

Any company which is interested in social media / networks data will be interested in recruiting the students finishing the course.

## Course layout:

**Week 1:** What is Online Social Networks, data collection from social networks, challenges, opportunities, and pitfalls in online social networks, APIs

**Week 2:** Collecting data from Online Social Media.

**Week 3:** Trust, credibility, and reputations in social systems

**Week 4:** Trust, credibility, and reputations in social systems

**Week 5:** Online social Media and Policing

**Week 6:** Information privacy disclosure, revelation and its effects in OSM and online social networks

**Week 7:** Phishing in OSM & Identifying fraudulent entities in online social networks

**Week 8:** Refresher for all topics

**Week 9 to 12:** Research paper discussion

# CA123: Foundation of Programming

## (200 Marks)

**Contact Hours: 07**

**Pre-requisite: None**

**Methodology & Pedagogy:** During theory lectures the emphasis will be given on theoretical concepts of flow charts and algorithms. Structure of C programming language and different elements of C programming will be explained in lectures. During practical sessions the concepts learned in theory lectures will be implemented.

**Outline of the course:**

| Unit No. | Title of the Unit                             | Minimum Number of Hours |           |
|----------|-----------------------------------------------|-------------------------|-----------|
|          |                                               | Theory                  | Practical |
| 1        | Programming Basics                            | 8                       | 36        |
| 2        | Introduction to C                             | 10                      |           |
| 3        | Expressions and Control Statements            | 9                       |           |
| 4        | Arrays and Strings                            | 7                       |           |
| 5        | Introduction to Functions                     | 5                       |           |
| 6        | Structure, Enumeration datatypes and Pointers | 9                       |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detail Syllabus:**

### Unit I: Programming Basics

**Hours 08**

Introduction to algorithm, Key features of algorithm, Introduction to flow charts, Significance of flow chart, Advantages and limitation of flow chart, Introduction to programming languages, Introduction to editor, compiler, and translator

### Unit II: Introduction to C

**Hours 10**

Introduction, characteristics of C, Structure of C Program, writing first C program, Files used in C program, Compiling and Executing C program; Basic data types in C, User define data types, Variables in C, Declaring and initializing variables in C, Constants, Input / Output statements in C; Operators - arithmetic, relational, logical, assignment, increment - decrement, conditional, Bitwise and special, comma operator, size-of

---

operator, operator precedence chart.

### **Unit III: Expressions and Control Statements**

**Hours 09**

Arithmetic expressions, evaluation of expressions, type conversions in expressions, operator precedence and associativity, mathematical functions. Type conversion and casting; Introduction to decision control statements, Conditional and branching statements, loop, nested loop, Break, continue and go to statement.

### **Unit IV: Array and Strings**

**Hours 07**

Arrays: One-dimensional, two-dimensional, Handling of Character Strings: Declaring and initializing string variables, reading string from terminal, writing string to screen, string handling functions, table of strings.

### **Unit V: Introduction to Functions**

**Hours 05**

Need for user-defined functions, the form of c function, return values and their types, calling a function, category of functions, handling of non-integer functions, nesting of Functions, recursion, functions with arrays, storage class.

### **Unit VI: Structure, Enumeration datatypes and Pointers**

**Hours 09**

Understanding the Computer's Memory, Introduction to Pointers, Declaring Pointer Variables, Pointer Expressions and Pointer Arithmetic, Null Pointers, Generic Pointers, passing arguments to Function using Pointers, Pointers and Arrays, Passing an Array to a Function, Difference between Array name and Pointer, Pointers and Strings, Array of Pointers.

### **Core Books:**

1. ReemaThareja: Computer Fundamentals and Programming in C, 2nd Edition, Oxford University press, 2012
2. E. Balagurusamy: Programming In C, 6th Edition, 2012
3. PradipDey and Manas Ghosh. "Programming in C", Second Edition, Oxford University Press.

### **Reference Books:**

1. Herbert Schildt: The complete reference C, Fourth edition, Tata McGraw Hill,2000
2. YashwantKanetkar: Let us C, 13th Edition, BPB publication, 2013.
3. PradipDey, Manas Ghosh: Programming in C, 4th Edition, Oxford University press , 2012.
4. Brian W. Kerighan and Dennis M. Ritchie : The C Programming Language,Prentice Hall.

### **Web References:**

1. <https://cprogrampracticals.blogspot.com/p/basic-concepts.html> [For basic c programing practical]
2. <https://www.programtopia.net/c-programming/docs/operators-expressions> [For operators and expressions in C]
3. <https://www.javatpoint.com/functions-in-c> [For functions]
4. <https://www.programiz.com/c-programming> [For basic c programing practical]
5. <https://www.javatpoint.com/c-pointers> [ pointers in c]

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                                                                                |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Be able to solve problems using algorithms and flowcharts.                                                                                                     |
| <b>CO2 :</b> | Learn about the structure of C program and able to develop simple programs using the C Programming language with data types, variables and constants.          |
| <b>CO3 :</b> | Gain the knowledge of different conditional and iterative statements and expressions.                                                                          |
| <b>CO4 :</b> | Arrays of numbers and characters as well as manipulating with them.                                                                                            |
| <b>CO5 :</b> | Be able to understand user define function. Also Understand the concept of Dynamic memory management. Learn Programing-using Array with Pointer and Structure. |

**Course Outcomes Mapping:**

| Unit No. | Unit Name                                     | Course Outcomes |     |     |     |     |

# CA124: Digital Computer Fundamentals

## (100 Marks)

**Contact Hours: 04**

**Pre-requisite: None**

**Methodology & Pedagogy:** In order to achieve the course objectives, students will be introduced to digital technologies. Various digital modules used to create digital computer devices like gates, flip flops, decoder, encoder etc. are to be studied. Mathematical base is created to understand the organization of digital computer.

### Outline of the course:

| Unit No. | Title of the Unit                          | Minimum Number of Hours |
|----------|--------------------------------------------|-------------------------|
| 1        | Digital Systems and Binary Numbers         | 10                      |
| 2        | Boolean Algebra and Logic Gates            | 10                      |
| 3        | Combinational Circuit Designing            | 8                       |
| 4        | Sequential Circuit Designing               | 8                       |
| 5        | Memory Interfaces and Data Representation  | 6                       |
| 6        | The Arithmetic Logic Unit and Control Unit | 6                       |

**Total Hours (Theory): 48**

**Total Hours (Lab)**

**Total Hours: 48**

### Detailed Syllabus:

#### Unit - I: Digital Systems and Binary Numbers:

**Hours 10**

Introduction and Evolution of Digital computers, Major components of digital computer, Interfaces and Buses, compiler, interpreter, Assembler, Introduction to various number systems (Decimal, Binary, Octal, Hexadecimal, BCD), Conversion of number system, Binary operations, signed binary numbers, 1's complement and 2's complement.

#### Unit - II: Boolean Algebra and Logic Gates:

**Hours 10**

Fundamental concepts and rules of Boolean algebra, , Boolean Algebra Laws, Boolean expressions and its simplification with and without Truth Tables, Canonical form and standard form, D-Morgan's Theorem, Basic duality laws, Derivation of Boolean expressions, Introduction to logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR), Implementation of Boolean expressions using logic gates, Sum of product and Product of Sum forms, Universal gates, Implementation of other gates using universal gates, Karnaugh Map method for two, three, four and five variables, K-map with don't care conditions, Tabulation method, determination and selection of prime applicants.

**Unit - III: Combinational Circuit Designing:**

**Hours 08**

Introduction to combinational circuits, Design procedures, Adders, Subtractors, code conversion circuits, Analysis procedures, Multilevel NAND circuits, Multilevel NOR circuits, EX-OR functions, Binary adder and Subtractors, Decimal adder and Subtractors, Magnitude comparator, Decoder and encoders, Multiplexer and demultiplexer.

**Unit - IV: Sequential Circuit Designing:**

**Hours 08**

Introduction to Sequential circuits, Concepts of Flip-flops, triggering flip-flops, Clock signals, Analysis of clock sequential circuits, State Reduction and assignments, Flip flop excitation table, Design procedure of asynchronous and synchronous counters (Ripple counter, Binary counter, BCD counter), Design of registers, Shift registers, Timing sequences.

**Unit - V: Memory Interfaces and Data Representation:**

**Hours 06**

Memory, Types of ROM, Design of ROM, Types of RAM, Magnetic disc memory, Magnetic tape, Digital recording techniques, Linear-select memory organization, Types of digital codes (Gray code, 8421 code, Alphanumeric codes), Parity checking codes, Floating point representation, Fixed point representation.

**Unit - VI: The Arithmetic Logic Unit and Control Unit:**

**Hours 06**

Basic operations of Arithmetic Logic Unit, Construction of the Arithmetic Logic Unit, Representation of Instruction word, Control registers, Instruction and execution cycles of Control registers, Sequence operation of Control Registers.

**Core Books:**

1. M. Morris Mano: Digital Logic and Computer Design, Third Edition, Pearson Education, 2016.
2. Thomas C. Bartee: Digital Computer Fundamentals, Sixth Edition, Tata McGraw Hill Publishing, 2012.
3. M. Morris Mano: Computer System Architecture, Third Edition, Pearson Education, 2011.

**Reference Books:**

1. Andrew S. Tanenbaum: Structured Computer Organization, Fourth Edition, Pearson Education, 2005.
2. Abert Paul Malvino and Jerald A. Brown: Digital Computer Electronics, Third Edition, Tata McGraw Hill Publishing, 2008.

**Web References:**

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                              |
|--------------|----------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | To get the idea about digital system and numbering system.                                   |
| <b>CO2 :</b> | To study logic gates for digital circuit designing.                                          |
| <b>CO3 :</b> | Learn to design various combinational circuits                                               |
| <b>CO4 :</b> | Learn to design various sequential circuits                                                  |
| <b>CO5 :</b> | To learn memory design concepts and to study computer Arithmetic Logic Unit and Control Unit |

**Course Outcomes Mapping:**

| Unit No. | Unit Name                                  | Course Outcomes |     |     |     |     |
|----------|--------------------------------------------|-----------------|-----|-----|-----|-----|
|          |                                            | CO1             | CO2 | CO3 | CO4 | CO5 |
| 1        | Digital Systems and Binary Numbers         | √               |     |     |     |     |
| 2        | Boolean Algebra and Logic Gates            |                 | √   |     |     |     |
| 3        | Combinational Circuit Designing            |                 |     | √   |     |     |
| 4        | Sequential Circuit Designing               |                 |     |     | √   |     |
| 5        | Memory Interfaces and Data Representation  |                 |     |     |     | √   |
| 6        | The Arithmetic Logic Unit and Control Unit |                 |     |     |     | √   |

**Course Articulation Matrix:**

# CA125: Fundamentals of Web Designing

## (100 Marks)

**Contact Hours: 03**

**Pre-requisite:** Basic concepts of web

**Methodology & Pedagogy:** This course focuses on providing hands-on experience to students for design and develop entire web sites using several web designing tools and HTML scripting language.

### Outline of the course:

| Week No | Practical                                                                                                                                                                                                                                  | Description                                                                                                                                               |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 - 2   | Basic Construction of an HTML & HTML5 Page, HTML Text Editors, HTML Building blocks. Adding Content : Basic HTML tags – Text formatting tags, heading tags, paragraph tags, division tag, Span tags, Break line tag, Binding space in HTML | Student can learn basic concepts of web page design. Students get familiar with different tags and attributes which is used to add the text in a web page |
| 3 - 4   | Controlling Font size and color, Adding Table – Table tag, grouping and merging table rows and columns. Adding List – ordered, unordered and definition list                                                                               | Student can able to change the font styles and color in more attractive way. Also, they can able to display the information in tabular & List format      |
| 5 - 6   | Adding Image, Adding links - Changing link colors, Email link, Embedding audio and video, Adding Field sets.                                                                                                                               | Student can add multimedia like image, audio, video in a web page. Student can explore various internal and external linking methods.                     |
| 7 - 8   | Adding Form: Form tag, Action, Method. Basic form controls – Textbox, Password field, Radio Button, Checkbox, Multiple line text area, file upload, Various types of buttons – submit, reset, image, simple button,                        | Student can design the various form elements for interaction with the web page users.                                                                     |
| 9 - 10  | HTML5 input elements - Color, Number, Date, Month, week, Time, datetime-local, Email, url, range, search, <datalist>, <output>, <progress>, <meter>                                                                                        | Student can apply HTML5 input element to make form more attractive                                                                                        |
| 11 - 12 | Regular expression, HTML5 new attributes – Placeholder, Required, Pattern, Autocomplete, Autofocus, novalidate, formnovalidate, formaction, formmethod, spellcheck, contenteditable.                                                       | Student can explore the basic HTML5 new attributes and also apply validation on form submission                                                           |

**Total Hours (Practical): 36**

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                              |
|--------------|----------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Able to understand basic construction of HTML & HTML5 document and started using basic tags. |
| <b>CO2 :</b> | Able to Add content using various tags and format the content in table & list.               |
| <b>CO3 :</b> | Able to design links and multimedia elements such as image, audio, video.                    |
| <b>CO4 :</b> | Able to design a web page form using HTML & HTML5.                                           |
| <b>CO5 :</b> | Able to apply validation using HTML5 attributes.                                             |

**Course Outcomes Mapping:**

| Week No. | Practical Title                                                           | Course Outcomes |     |     |     |     |

## CA127-Business Economics (100 Marks)

**Contact Hours: 03**

**Pre-requisite:** None

**Methodology & Pedagogy:** During theoretical lessons, real-world examples will be used to discuss economic topics such as demand, supply, production, cost function, market structure, factor pricing, and microeconomics. Students will be offered appropriate case studies in order to provide actual exposure to theoretical economic ideas.

**Outline of the course:**

| Unit No. | Title of the Unit                                         | Minimum Number of Hours |
|----------|-----------------------------------------------------------|-------------------------|
| 1        | Fundamentals of Economics                                 | 05                      |
| 2        | Basic Elements of Demand and Supply                       | 06                      |
| 3        | Theory of Production and Cost                             | 07                      |
| 4        | Analysis of Revenue                                       | 07                      |
| 5        | Market Failures and Price Regulation                      | 05                      |
| 6        | Macro-Economic Environment and National Income Accounting | 06                      |

**Total Hours (Theory): 36**

**Total Hours: 36**

**Detail Syllabus:**

**Unit - I: Fundamentals of Economics**

**Hours: 05**

Fundamentals of Economics, Needs, wants, nature of economics, scope of economics, business economics, laws of economics, business cycle, difference between Micro and Macro Economics.

**Unit - II: Basic Elements of Demand and Supply**

**Hours: 06**

Demand and supply, types of demand, determinants of demand and supply, law of demand and supply, balance between demand and supply, demand and supply schedule, demand function.

**Unit - III: Theory of Production and Cost**

**Hours: 07**

Theory of Production- Factors of Production, Basic Concepts, Production Function, Producer's Equilibrium- Least-Cost Factor Combination and Output Maximization for a given Level of Outlay. Theory of Costs- Basic Concepts, Short-run Total Cost, Short-run Average and Marginal Cost, Relationship between Average and Marginal Cost,

Average and Marginal Cost in the Long-run.

#### **Unit- IV: Analysis of Revenue**

**Hours: 07**

Basic Concepts of Revenue, Revenue, Relationship between Average and Marginal Revenue, Concept of Market and Main Forms of Market; Equilibrium of the Firm-Meaning, Objectives of the Firm, Monopoly and its features, Monopolistic Competition and Oligopoly.

#### **Unit - V: Market Failures and Price Regulation**

**Hours: 05**

Market failures and need for regulation, Regulations and market structure, Firm behavior, Price regulation.

#### **Unit - VI: Macro-Economic Environment and National Income Accounting**

**Hours: 06**

Basic macro- economic concepts –aggregate, demand aggregate supply, money, income employment consumption savings and investment. National Income Accounting- concepts and methods of national income, different methods of national income accounting.

#### **Core Books:**

1. P.L Mehta: Managerial Economics, Sultan Chand and Sons Publication, 2014
2. Keat Paul , K Young Philip , Erfle Steve, Banerjee Sreejata: Managerial Economics, seventh edition, Pearson Education, 2017.

## OCBCA1003: Foundations of Cryptography

### Description:

This is course OCBCA1003 – **Foundations of Cryptography** is offered from SWAYAM as noc24\_cs01 – Foundations of Cryptography.

### Credit and Week:

| Teaching Scheme | Week | Marks | Credit |
|-----------------|------|-------|--------|
|                 | 12   | 100   | 3      |

### About the course:

The course provides the basic paradigm and principles of modern cryptography. The focus of this course will be on definitions and constructions of various cryptographic objects. We will try to understand what security properties are desirable in such objects, how to formally define these properties, and how to design objects that satisfy the definitions. The aim is that at the end of this course, the students are able to understand a significant portion of current cryptography research papers and standards.

### Pre-requisites:

There are no pre-requisites for this course. However, it is expected that the students who are interested to take this course have had some exposure to a basic course on discrete mathematics, algorithms, or theory of computation. Having said that, I ensure that a significant effort will be made from my side to simplify the overall presentation of the course and make it easily accessible.

### Industry support:

The course will be relevant for any IT related company.

### Course layout:

**Week 1:** Course Overview, Symmetric-key Encryption, Historical Ciphers, Perfect Security and Its Limitations.

**Week 2:** Computational Security, Semantic Security and Pseudorandom Generators (PRGs)

**Week 3:** Stream Ciphers, Provably-secure Instantiation of PRG, Practical Instantiation of PRG, CPA-security and Pseudo-random Functions (PRFs).

**Week 4:** CPA-Secure Ciphers from PRF, Modes of Operations of Block Ciphers, Theoretical Constructions of Block Ciphers and Practical Constructions of Block Ciphers

**Week 5:** DES, AES and Message Authentication Codes (MAC).

**Week 6:** Information-theoretic Secure MAC, Cryptographic Hash Functions, Ideal-Cipher Model, Davies-Meyer construction and Merkle-Damgård Paradigm.

**Week 7:** Birthday Attacks on Cryptographic Hash Functions, Applications of Hash Functions, Random Oracle Model and Authenticated Encryption.

**Week 8:** Generic Constructions of Authenticated Encryption Schemes, Key-exchange Problem, One-way Trapdoor Functions and Cyclic Groups.

**Week 9:** Discrete-Logarithm Problem, Computational Diffie-Hellman Problem, Decisional Diffie-Hellman Problem, Elliptic-Curve Based Cryptography and Public-Key Encryption.

**Week 10:** El Gamal Encryption Scheme, RSA Assumption, RSA Public-key Cryptosystem, KEM-DEM Paradigm and CCA-security in the Public-key Domain

**Week 11:** CCA-secure Public-key Hybrid Ciphers Based on Diffie-Hellman Problems and RSA-assumption, Digital Signatures, RSA Signatures and Schnorr Identification Scheme.

**Week 12:** Schnorr Signature, Overview of TLS/SSL, Number Theory, Interactive Protocols and Farewell.

## **Books and references**

### **Text Books / Basic Material**

1. Introduction to Modern Cryptography by Jonathan Katz and Yehuda Lindell.
2. Cryptography Theory and Practice by Douglas Stinson.

**CRITERIA TO GET A CERTIFICATE**

Average assignment score = 25% of average of best 8 assignments out of the total 12 assignments given in the course.

Exam score = 75% of the proctored certification exam score out of 100

Final score = Average assignment score + Exam score

**YOU WILL BE ELIGIBLE FOR A CERTIFICATE ONLY IF AVERAGE ASSIGNMENT SCORE  $\geq 10/25$  AND EXAM SCORE  $\geq 30/75$ .**

**If one of the 2 criteria is not met, you will not get the certificate even if the Final score  $\geq 40/100$ .**

## OCBCA1004: E-Business

### Description:

This is course OCBCA1004 – **E-Business** is offered from SWAYAM as noc24\_mg16 – E-Business.

### Credit and Week:

| Teaching Scheme | Week | Marks | Credit |
|-----------------|------|-------|--------|
|                 | 12   | 100   | 3      |

### About the course:

The Internet has changed the way companies carry out their businesses. The primary objective of this course is to introduce concepts, tools and approaches to electronic business to the post-graduate and undergraduate students. Further, the subject will help the students to develop skills to manage businesses in the digital world. The course will cover following aspects of E-Business Systems.

- Part 1: Foundations of E-Business systems
- Part 2: Infrastructure
- Part 3: Functional Areas
- Part 4: Decision Support for E-Business Systems

The course provides a balance approach including concepts from technology and management.

**Pre-requisites:** NIL

**Industry support:** All the companies.

### Course layout:

**Week 1:** Introduction to E-Business

**Week 2:** Making Functional Areas E-Business Enabled : Value chain and supply chain, inter and intra organizational business processes, ERP

**Week 3:** Making Functional Areas E-Business Enabled : E-Procurement.

**Week 4:** Making Functional Areas E-Business Enabled : E-marketing, E-Selling, E-Supply Chain Management

**Week 5:** Technologies for E-Business: Internet and Web based system

**Week 6:** Technologies for E-Business: Security and payment systems

**Week 7:** Technologies for E-Business: Supply chain integration technologies (EDI, RFID, Sensors, IoT, GPS, GIS)

**Week 8:** Technologies for E-Business: Supply chain integration technologies (Web services and cloud)

**Week 9:** Decision Support in E-Business: Web analytics

**Week 10:** Decision Support in E-Business: Customer behavior modeling

**Week 11:** Decision Support in E-Business: Auctions

**Week 12:** Decision Support in E-Business: Recommender systems

## **BOOKS AND REFERENCES**

1. Management Information Systems: Managing the Digital Firm, Laudon and Laudon, Pearson
2. Scaling for E-Business, Menasce & Almeida, PHI
3. eBusiness & eCommerce – Managing the Digital Value Chain, Meier & Stormer, Springer
4. eBook is available in [springerlink.com](http://springerlink.com)
5. Some reference books, Internet Resources, and Research Papers

## **CRITERIA TO GET A CERTIFICATE**

Average assignment score = 25% of average of best 8 assignments out of the total 12 assignments given in the course.

Exam score = 75% of the proctored certification exam score out of 100

Final score = Average assignment score + Exam score

**YOU WILL BE ELIGIBLE FOR A CERTIFICATE ONLY IF AVERAGE ASSIGNMENT SCORE  $\geq 10/25$  AND EXAM SCORE  $\geq 30/75$ .**

**If one of the 2 criteria is not met, you will not get the certificate even if the Final score  $\geq 40/100$ .**

# OCBCA1005: Entrepreneurship Essentials

## Description:

This is course OCBCA1005 – **Entrepreneurship Essentials** is offered from SWAYAM as noc24\_ge15 – Entrepreneurship Essentials.

## Credit and Week:

| Teaching Scheme | Week | Marks | Credit |
|-----------------|------|-------|--------|
|                 | 12   | 100   | 3      |

## About the course:

The course provides foundational knowledge on various aspects of entrepreneurial venture creation and management during its life-cycle. It has been designed to address multidisciplinary audiences. The objective of the course is to teach key issues faced by entrepreneurs and managers at different stages of the life-cycle of an enterprise and is relevant both for aspiring entrepreneurs and for decision makers in established enterprises. Topics can be classified in some major themes such as : Making a choice to create an entrepreneurial venture, current trend of technology entrepreneurship, how to start a start-up, identifying opportunities, factors driving competitive advantages, organizational structure, basic knowledge of financial statements and project report, introductory knowledge on marketing management, human resource management, & strategic management, risk analysis, legal aspect of business, how to raise fund during life-cycle of a new ventures.

**Pre-requisites:** All students with education up to higher secondary can take up this course.

**Industry support:** All start-ups, companies in emerging technology domains, companies adopting 'corporate entrepreneurship', professionally managed companies

## Course layout:

- Week 1:** Introduction  
Dhirubhai Ambani & Sofia  
Myths & Realities about entrepreneurship  
entrepreneurial qualities  
Why start-ups fail?
- Week 2:** Mission, vision, entrepreneurial qualities – I  
Mission, vision, entrepreneurial qualities – II  
Value proposition  
Business Model canvas  
Business model generation
- Week 3:** Competitive advantage  
Lean start-up – 1  
Lean start-up – 2  
Team and early recruit  
Legal forms of business
- Week 4:** Marketing management 1  
Marketing management 2  
Market research –I  
Market research –II  
Market research –Example
- Week 5:** Introduction to financial statements  
Profit & Loss statement  
Balance sheet  
Cash flow  
Example – 1  
Example – 2  
Cost-volume-profit & Bread-Even analysis  
Capital budgeting
-

- Week 6:** Business plan-I  
Business plan-II  
Pitching  
Go-to-market strategies Does & Don'ts
- Week 7:** How to innovate  
Design Thinking  
Design-Driven Innovation, Systems thinking  
Open innovation, TRIZ  
How to start a start-up?
- Week 8:** Government incentives for entrepreneurship (1 lecture)  
Incubation, acceleration  
Funding new ventures – bootstrapping, crowd sourcing,  
angel investors, VCs, debt financing (3), due diligence  
Legal aspects of business (IPR, GST, Labour law)
- Week 9:** Cost, volume, profit and break-even analysis  
Margin of safety and degree of operating leverage  
Capital budgeting for comparing projects or opportunities  
Product costing  
Product pricing
- Week 10:** Funding new ventures – bootstrapping, crowd sourcing,  
Angel investors, VCs, debt financing (3), and due diligence  
Incubation and acceleration  
Government incentives for entrepreneurship  
Project cost and Financial Closure
- Week 11:** Dos & Dons in entrepreneurship  
Growth Hacking  
Growth Strategy  
Legal aspects of business (IPR, GST, Labor law)  
Negotiation skill
- Week 12:** Human Resource management in startups  
Pivoting  
Entrepreneurial cases  
Risk assessment and analysis
-

Strategy management for entrepreneurial ventures  
Factors driving success and failure of ventures  
Concluding remarks

score  $\geq 40/100$ .**

## CA128: Advance Web Designing (100 Marks)

**Contact Hours: 03**

**Pre-requisite:** CA123 – Fundamentals of Web Designing

**Methodology & Pedagogy:** This subject focuses on hands-on experiments to create dynamic and interactive web sites using HTML5, CSS3 and JavaScript.

**Outline of the course:**

| Week No | Practical                                                                                                                                                                                                                              | Description                                                                                                              |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 1- 2    | CSS Styling the web - Applying CSS Building blocks – CSS Selectors, Cascade & inheritance, CSS Properties, CSS Box model.                                                                                                              | Student can apply various types of CSS with its basic properties.                                                        |
| 3 - 4   | Creating Layout - Header, footer, navigation menu, and sub-navigation. Floats, Flexbox, Grids, Positioning, Multiple column layout.                                                                                                    | Student can create different layout using semantic elements of HTML5 & CSS classification properties.                    |
| 5 - 6   | Creating Image Gallery and Animation - 2D/3D Transformation, Transitions and Animation, CSS Media query                                                                                                                                | Student can create layout image gallery & animation.                                                                     |
| 7 - 8   | JavaScript – Adding Internal & External JavaScript, Working with variables, datatype – Number, String, Boolean, Array, Object, Operators, Conditional statements, Looping statements.                                                  | Student can write script for basic programs using condition, Loop, array and object.                                     |
| 9 - 10  | Adding Dialog boxes in HTML page – Alert, Confirm and Prompt. Creating user defined function, Adding Mouse and Keyboard Event in HTML page, Manipulating String and Date.                                                              | Student can able to use in-build and user defined functions of JavaScript and make user interaction using various Events |
| 11 - 12 | JavaScript Document Object Model hierarchy – Create find and manipulate HTML Element using Objects and methods. Form validation, Applying Style using JavaScript. Creating New window, Accessing & manipulating History of HTML Pages. | Student can explore the DOM Hierarchy and apply various objects to make web page dynamic with user interactions.         |

4. <https://www.tutorialsteacher.com/javascript/javascript-hoisting> [JavaScript Basics]

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                         |
|--------------|-------------------------------------------------------------------------|
| <b>CO1 :</b> | Able to apply CSS & its basic properties in web pages.                  |
| <b>CO2 :</b> | Able to create HTML, CSS layout.                                        |
| <b>CO3 :</b> | Able to apply the transition, transformation and animation in web page. |
| <b>CO4 :</b> | Able to write client side script – JavaScript to perform basic program  |
| <b>CO5 :</b> | Able to use DOM objects for dynamic web pages                           |

**Course Outcomes Mapping:**

| Week No. | Practical Title                              | Course Outcomes |     |     |     |     |
|----------|----------------------------------------------|-----------------|-----|-----|-----|-----|
|          |                                              | CO1             | CO2 | CO3 | CO4 | CO5 |
| 1        | CSS Styles & Properties                      | √               |     |     |     |     |
| 2        | CSS Layout                                   | √               | √   |     |     |     |

## CA129: Fundamentals of Object Oriented Programming (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** CA123: Foundation of Programming.

**Methodology & Pedagogy:** During the Theory sessions concept will be covered with real world examples to understand the application and usage of object oriented programming over procedural programming. During Practical sessions, students will implement the concepts using various assignments and case study.

### Outline of the Course:

| Unit No. | Title of the Unit                           | Minimum Number of Hours |           |
|----------|---------------------------------------------|-------------------------|-----------|
|          |                                             | Theory                  | Practical |
| 1.       | Introduction to Object Oriented Programming | 06                      | 36        |
| 2.       | Classes and Objects                         | 08                      |           |
| 3.       | Polymorphism                                | 09                      |           |
| 4.       | Inheritance                                 | 09                      |           |
| 5.       | Exception Handling and Type cast operators  | 09                      |           |
| 6.       | Managing I/O formats and operations         | 07                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total: 84**

### Detailed Syllabus:

#### Unit - I: Introduction to Object Oriented Programming      Hours:06

Structured programming vs. object oriented programming, Introduction to C++: structure of a C++ program Tokens, inline function, pass by reference, default arguments, OOP characteristics.

#### Unit - II: Classes and Objects      Hours:08

Define class, objects, visibility modes, static members, friend function, Constructors and Destructors, Default Constructor, Copy constructors, Parameterized Constructor, this keyword.

### **Unit - III: Polymorphism**

**Hours:09**

Introduction of Static Binding, Function Overloading and ambiguity raised in function overloading,;Operator overloading through member function and friend functions, type conversions from primitive to class, class to primitive and class to class.

### **Unit - IV: Inheritance**

**Hours:09**

Objective of Inheritance, types of inheritance, impact of access modes during inheritance, Virtual base classes, Dynamic Binding, Virtual functions, Pure virtual functions, Abstract class, Early vs. Late binding.

### **Unit - V: Exception Handling and Type Cast Operators**

**Hours: 09**

Introduction to Exception handling, catching class types, using multiple catch statements, exception handling options, creating custom exceptions, introduction to cast operators, const cast, static cast, reinterpret cast, dynamic cast.

### **Unit - VI: Managing I/O Formats and Operations**

**Hours:07**

Understand and apply concepts from various header files like iostream. Iomanip, fstream, etc. opening and closing file, reading and writing text files and binary files, performing random access on files, handle command line arguments.

### **Core Books:**

1. Herbert Schildt: C++: A Beginner's Guide, 2<sup>nd</sup> Edition Paperback, McGraw-Hill,2003.
2. E Balagurusamy: Object Oriented Programming with C++ Paperback, McGraw Hill India,2017.

### **Reference Books:**

1. Yashavant Kanetkar: Let Us C++, Paperback, BPB Publications,2020.
2. Robert Lafore: Object Oriented Programming in C++, 4<sup>th</sup> Edition, Sams Publications,2002.
3. Bruce Eckel:Thinking in C++, Volume 1, 2<sup>nd</sup> Edition, Pearson Education,2006.

### **Web References:**

1. <https://www.geeksforgeeks.org/c-plus-plus/> [For Entire Syllabus]
2. <https://google.github.io/styleguide/cppguide.html>  
[ For coding standards and concepts]
3. [http://www.tutorialspoint.com/cplusplus/cpp\\_basic\\_input\\_output.htm](http://www.tutorialspoint.com/cplusplus/cpp_basic_input_output.htm)  
[For Practicals]

**Course Outcomes:** Upon successful completion of the course, the students will:

|       |                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 : | Understand the basic structure of C++ program and understand the concept of object oriented programming characteristics.                                                                |
| CO2 : | Understand the concept of Constructor and Destructor and able to create class and objects.                                                                                              |
| CO3 : | Understand the need of Polymorphism and implement static polymorphism                                                                                                                   |
| CO4 : | Understand the purpose of Inheritance, identify relations between classes, implement inheritance and perform dynamic binding.                                                           |
| CO5 : | Able to handle the runtime errors or exceptions in C++ and use type cast operators. Able to read input from device, file, command line arguments and apply formats to input and output. |

**Course Outcomes Mapping:**

| Unit No. | Unit Name                                   | Course Outcomes |     |     |     |     |
|----------|---------------------------------------------|-----------------|-----|-----|-----|-----|
|          |                                             | Co1             | Co2 | Co3 | Co4 | Co5 |
| 1        | Introduction to Object Oriented Programming | √               |     |     |     |     |

# CA130: Database Fundamentals

## (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** Basic knowledge of working with computer

**Methodology & Pedagogy:** During the theory lectures, concepts for data storage will be discussed. Also DBMS and RDBMS concepts will be discussed in depth. The database applications used in the real world will be discussed with necessary examples. During the laboratory hours' students will implement the concepts that are discussed during lecture.

**Outline of the course:**

| Unit No. | Title of the Unit                             | Minimum Number of Hours |           |
|----------|-----------------------------------------------|-------------------------|-----------|
|          |                                               | Theory                  | Practical |
| 1        | Introduction to Database System               | 04                      | 36        |
| 2        | Data Modeling using Entity Relationship Model | 08                      |           |
| 3        | Relational Data Modeling                      | 08                      |           |
| 4        | Database Design Methodology                   | 08                      |           |
| 5        | Schema Definition, Constraints, Queries       | 10                      |           |
| 6        | Advanced Query Processing                     | 10                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detail Syllabus:**

### Unit I: Introduction to Database System

**Hours: 04**

Basic Concepts: data, **information**, **file**, database, database systems, database management system Purpose and advantages of Database management system (over file systems), **Applications of DBMS** Various data models – ER Model and Relational Model, Three level architecture, Structure of DBMS, Database actors and workers

### Unit II: Data Modeling using Entity Relationship Model

**Hours: 08**

Entity Types, Entity Sets, Attributes, Keys, Relationship Types, Relationship Sets, Roles and Structural Constraints, Weak Entity Types, ER Diagram – Notations and fundamentals, Concept of Generalization and Specialization, Associative Entity, Conversion from ER Model to Relational Model

### Unit III: Relational Data Modeling

**Hours: 08**

Relational Model Concepts, Relational Model Constraints, Relational Model Schemas, Update Operation, Transactions, Dealing with Constraint Violations, Relational Algebra and Calculus, Difference between ER Model and Relational Model.

#### **Unit IV: Database Design Methodology**

**Hours: 08**

Functional Dependency and Normalization for Database – Informal Design Guidelines for Relational Schemas, Functional Dependencies, Normal Forms (1NF, 2NF, 3NF, BCNF, 4NF, 5NF), Codd Rules

#### **Unit V: Schema Definition, Constraints, Queries**

**Hours: 10**

Table Fundamentals: Basic Data types, Create Table Command, Viewing Data in the tables, sorting, Insert, Delete and Update Statements in SQL, Modifying the structure of tables, renaming table, truncating table, destroying table.; Data Constraints and Functions: - Pseudo columns, Null values, TAB table, DUAL table Operators, Data constraints, Type of data constraints, modifying constraints, working with data dictionary and use of USER\_CONSTRAINTS Functions – introduction, merits and demerits, types of functions Numeric functions, Character functions, Date functions, Conversion functions, Aggregate functions

#### **Unit VI: Advanced Query Processing**

**Hours: 10**

Union, Intersect and Minus Clause, Except Nested Queries – Introduction, Co-related Nested Queries, Set Comparison Operators Aggregate Operators, Group By clause with Rollup and Cube, having clause, Order by clause Null Values – Comparison using Null Values, Logical Connectivity – AND, OR and NOT, Using Like predicate and IN, EXISTS, NOT EXISTS, ANY Operators, Impact on SQL constructs, Joins (Inner Join, Outer Join, Self-Join, Equi Join, Cross Join) Complex Integrity Constraints in SQL – constraints over single table, domain constraints and distinct types Creation and manipulation of database objects – indexes, views, sequences and synonym.

#### **Core Books:**

1. RamezElmasri, Shamkant B. Navathe : Fundamentals of Database Systems , 5th Edition, , Pearson Publication.
2. Ivan Bayross : SQL, PL/SQL – The programming Language Oracle.
3. Ramkrishnan, Gehrke : Database Management Systems, 3 rd Edition, McGrawHill Publication.

#### **Reference Books:**

1. Silberschatz, Korth, Sudarshan : Database System Concepts, 5th Edition, McGraw Hill.
2. C.J.Date, a Kannan, S Swaminathan : An Introduction to Database Systems, 8th Edition, Pearson Education,(Equivalent Reading).
3. Scoot Urban : Oracle 9i, PL/SQL Programming, Oracle Press.
4. S. K. Singh : Database Systems: Concepts, Design and Applications, Pearson Education
5. Peter Rob, Carlos Coronel: Database Systems: Design, Implementation and Management, 7th Edition, Cengage Learning, 2007.
6. Anjali, Amisha, Roopal and Nirav : Practice book on SQL and PL/SQL.
7. Leon and Leon : Database management Systems, Vikas Publication.

## HS201.02 C: PAINTING

### (100 Marks)

**Contact Hours: 30 Hrs.**

**Pre-requisite: None**

**Instructional Methods and Pedagogy:** Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

**Evaluation:** The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

**Internal Evaluation:** Students' performance in the course will be evaluated on a continuous basis through the following components:

| Sl. No.      | Component                  | Number | Marks per incidence | Total Marks |
|--------------|----------------------------|--------|---------------------|-------------|
| 1            | Participation              | -      | 05                  | 05          |

**Course Outcome (COs):** At the end of the course, the students will be able to:

|     |                                                                                                                     |
|-----|---------------------------------------------------------------------------------------------------------------------|
| CO1 | have cultivated a sense of creativity.                                                                              |
| CO2 | be appreciative of art history, art criticism and aesthetics.                                                       |
| CO3 | be able to recognize the elements of arts in painting.                                                              |
| CO4 | have better cognizance and association of meaning of colors, shapes, and composition.                               |
| CO5 | be able to acknowledge the principles of painting as in design and colors, concept, medium and formats.             |
| CO6 | have instantaneous painting experience about designing, lights, shades and colors and such other important aspects. |

## HS202.02 C: PHOTOGRAPHY

### (100 Marks)

**Contact Hours: 30 Hrs.**

**Pre-requisite: None**

**Instructional Methods and Pedagogy:** Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

**Evaluation:** The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

**Internal Evaluation:** Students' performance in the course will be evaluated on a continuous basis through the following components:

| Sl. No.      | Component                  | Number | Marks per incidence | Total Marks |
|--------------|----------------------------|--------|---------------------|-------------|
| 1            | Participation              | -      | 05                  | 05          |
| 2            | Performance/<br>Activities | -      | 05                  | 05          |
| 3            | Project                    | -      | 15                  | 15          |
| 4            | Attendance                 | -      | 05                  | 05          |
| <b>Total</b> |                            |        |                     | <b>30</b>   |

**External Evaluation:** University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

| Sl. No.      | Component        | Number | Marks per incidence | Total Marks |
|--------------|------------------|--------|---------------------|-------------|
| 1            | Viva / Practical | -      | 70                  | 70          |
| <b>Total</b> |                  |        |                     | <b>70</b>   |

**Outline of the course:**

| Sr. No. | Title of the unit                  | Minimum number of hours |
|---------|------------------------------------|-------------------------|
| 1       | An Introduction to Photography     | 03                      |
| 2       | Camera and Operating System        | 05                      |
| 3       | Light and Shade                    | 10                      |
| 4       | Composition                        | 09                      |
| 5       | Contemporary Issues in Photography | 03                      |

**Practical Hours: 30 Hrs.**  
**Total hours: 30 Hrs.**

## HS205.02 C: MEDIA AND GRAPHIC DESIGN

(100 Marks)

**Contact Hours: 30 Hrs.**

**Pre-requisite: None**

**Instructional Methods and Pedagogy:** Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

**Evaluation:** The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

**Internal Evaluation:** Students' performance in the course will be evaluated on a continuous basis through the following components:

| Sl. No.      | Component               | Number | Marks per incidence | Total Marks |
|--------------|-------------------------|--------|---------------------|-------------|
| 1            | Participation           | -      | 05                  | 05          |
| 2            | Performance/ Activities | -      | 05                  | 05          |
| 3            | Project                 | -      | 15                  | 15          |
| 4            | Attendance              | -      | 05                  | 05          |
| <b>Total</b> |                         |        |                     | <b>30</b>   |

**External Evaluation:** University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

| Sl. No.      | Component        | Number | Marks per incidence | Total Marks |
|--------------|------------------|--------|---------------------|-------------|
| 1            | Viva / Practical | -      | 70                  | 70          |
| <b>Total</b> |                  |        |                     | <b>70</b>   |

**Outline of the course:**

| Sr. No. | Title of the unit | Minimum number of hours |
|---------|-------------------|-------------------------|
|---------|-------------------|-------------------------|

|   |                                             |    |

**Course Outcome (COs):** At the end of the course, the students will be able to:

|     |                                                                                           |
|-----|-------------------------------------------------------------------------------------------|
| CO1 | be able to develop ability to express through the form of dance.                          |
| CO2 | have enhanced aesthetic sensitivity.                                                      |
| CO3 | have improved concentration, mental alertness, quick reflex action, and physical agility. |
| CO4 | be able to express a natural way human feelings and expressions by creating harmony.      |
| CO5 | be able to deliver contemporary dance performance.                                        |

# CA226-Computer Oriented Numerical Methods

## (100 Marks)

**Contact Hours: 04**

**Pre-requisite: None**

**Methodology & Pedagogy:** During theory lectures illustrations of certain real world problems requiring numerical computations inference will be explained. Numerical methods will be introduced as tools for solving such problems also be emphasized.

**Outline of the course:**

| Unit No. | Title of the Unit                          | Minimum Number of Hours |
|----------|--------------------------------------------|-------------------------|
| 1        | Introduction to Numerical Methods          | 6                       |
| 2        | Interpolation                              | 7                       |
| 3        | Numerical Integration and Differentiation  | 8                       |
| 4        | Solution of Linear Equation                | 10                      |
| 5        | Solution of Differential Equations         | 9                       |
| 6        | Solution of Partial Differential Equations | 8                       |

**Total Hours (Theory): 48**

**Total Hours: 48**

**Detailed Syllabus:**

**Unit - I: Numerical Methods**

**Hours: 06**

Introduction to Numerical Methods, Various methods such as Bisection, False-Position and Newton-Raphson methods

**Unit - II: Interpolation**

**Hours: 07**

What is an interpolation, Difference tables, Newton forward and backward Interpolation formula, Lagrange's formula, Newton's Divided Difference Formula?

**Unit - III: Numerical Integration and Differentiation**

**Hours: 08**

Numerical Integration, Trapezoidal rule, Differentiating Continuous function (Two point and Three-point formula), Tabulated function and its maxima and minima.

**Unit - IV: Solution of Linear Equation**

**Hours: 10**

Solution of Linear Equation, Gauss-Jordan Elimination methods, Gauss - Seidal and Gauss Jacobi Interactive methods

**Unit - V: D Solution of Ordinary Differential Equations:**

**Hours: 09**

Solution of Ordinary Differential Equations, Taylor Series and Euler Methods, Runge-Kutta Methods,

**Unit - VI: Solution of Partial Differential Equations:****Hours:08**

Review and examples of partial differential equations, classification of partial differential equations, Difference equation, Laplace's equation and Poisson's equation

**Core Books:**

## **CA227: Computer Oriented Management System (100 Marks)**

**Contact Hours: 4**

**Pre-requisite:** None.

**Methodology & Pedagogy:** During the Theory sessions, illustrations of working real time information system will be demonstrated. Industrial visits will be arranged in order to demonstrate actual functioning of such systems. Students will be required to carry out a case study of such system.

### **Outline of the Course:**

| <b>Unit No.</b> | <b>Title of the Unit</b>                         | <b>Minimum Number of Hours</b> |
|-----------------|--------------------------------------------------|--------------------------------|
| 1.              | Introduction to Information System               | 07                             |
| 2.              | Transaction Processing Systems                   | 08                             |
| 3.              | Management Information System                    | 09                             |
| 4.              | Decision Support System                          | 09                             |
| 5.              | Knowledge Management & Executive Support Systems | 08                             |
| 6.              | Introduction To ERP and Technology               | 07                             |

**Total Hours (Theory): 48**  
**Total: 48**

## **Detailed Syllabus:**

### **Unit - I: Introduction to Information System**

**Hours:07**

Data & Information, what is a system, Types of Systems, Types of information, Quality of Information, what is an Information System, Functions of Information System, classification of an Information System, Major Types of Information Systems, Interrelationship of Information Systems.

### **Unit - II: Transaction Processing Systems**

**Hours:08**

Introduction of Transaction Processing System (TPS), Transaction Processing System (TPS) Architecture, Transaction Processing System (TPS) Life cycle, Methods of Transaction Processing System (TPS), Information System Availability Control, Illustrations and live demonstration of TPS such as Banking System, Railway reservation system etc.

### **Unit - III: Management Information System**

**Hours:09**

Introduction to Management: Approaches of Management, Function of Management, System from Functional Perspective, Reports of Management Information System, A business perspective of MIS, Dimensions of MIS, contemporary Approaches to Information System.

### **Unit - IV: Decision Support System**

**Hours:09**

Business value of Improved Decision making, Types of Decision, Decision making Process, The difference between MIS and DSS, Components of DSS, System for Decision Support Group Decision Support System, Business value of GDSS.

### **Unit - V: Knowledge Management & Executive Support Systems**

**Hours:08**

Important Dimensions of knowledge, Organizational learning and Knowledge Management, The Knowledge Management value chain, Overview of different types of Knowledge Management Systems, Characteristics of ESS, The Role of ESS in the Firm, Business value of ESS, Monitoring Corporate Performance, Working Examples of ESS.

### **Unit - VI: Introduction to ERP and Technology**

**Hours:07**

An overview of ERP, Basic ERP Concepts, Risk and Benefits of ERP, ERP and Related Technologies, Business Intelligence, Some case studies on ERP or Information system

## **Core Books:**

1. K. C. Laudon and J. P. Laudon: Management Information Systems, 12th Edition, Pearson Education.
2. Alexis Leon: ERP Demystified, Second Edition, Tata McGraw-Hill.

**Reference Books:**

1. W.S. Jawadekar: Management Information Systems, 2<sup>nd</sup> Edition, Tata McGraw-Hill.

**Course Outcomes:** Upon successful completion of the course, the students will able to :

|       |                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------|
| CO1 : | To understand basic of data & information, types of information system, function of information system and its quality. |
| CO2 : | To understand transaction processing concepts and its working.                                                          |
| CO3 : | Learning Management Information system, its types and its implementation.                                               |
| CO4 : | To gain understanding of Decision Support Systems.                                                                      |
| CO5 : | To learn Knowledge Management, Executive Support Systems, ERP and its technology.                                       |

## CA228: System Analysis and Design (100 Marks)

**Contact Hours: 03**

**Pre-requisite: None**

**Methodology & Pedagogy:** During theory lectures emphasis will be given on understanding how Information Systems are designed and constructed and how major modifications are made to existing systems, analyse business needs for information and develop an appropriate strategy to solve a particular business problem, understand the issues associated with physical design, utilize some of the tools used by systems analysts in the design of Information Systems, a significant portion of the course will deal with computer aided system engineering (CASE) tools and techniques in the context of a case study.

### Outline of the Course:

| Unit No. | Title of the Unit                                       | Minimum Number of Hours |
|----------|---------------------------------------------------------|-------------------------|
| 1.       | Introduction to System Development                      | 05                      |
| 2.       | Classical Systems Development Methodology               | 07                      |
| 3.       | Introduction to Data flow diagrams and Prototype design | 07                      |
| 4.       | Systems Design                                          | 06                      |
| 5.       | Quality assurance, maintenance and Audit                | 06                      |
| 6.       | Designing reliable system, training and conversion      | 05                      |

**Total Hours (Theory): 36**

**Total Hours: 36**

### Detail Syllabus:

#### Unit I: Introduction to System Development

**Hours 05**

Concept of system, Basic components, Information systems categories, Business Information Systems, Examples of real-life systems, System analyst – meaning, role and need, Users, need of information system development, Application development portfolio, Integration of portfolio, Controlling and monitoring committees.

#### Unit II: Classical Systems Development Methodology

**Hours 07**

Classical Systems Development Life Cycle (SDLC) method, Requirement determination, Fact finding techniques, Modern methods for determining systems requirements, Joint Application Development Program, Tools for documenting procedures and decisions,

Tools for systems development, understanding the format of system requirement specification.

### **Unit III: Introduction to Data flow diagrams and Prototype design**

**Hours 07**

Structured Analysis Development Strategy, Data Flow Diagrams (DFDs) for analysis and design, Physical and logical DFDs, Purpose of Application Prototyping, Steps in prototype method, Use of prototypes, Tools for prototyping, Strategies for prototype development, misconceptions about prototyping

### **Unit IV: Systems Design**

**Hours 06**

Analysis to design transition, Design of output system, Design of input system, Design of security and control, Design of user interface and Design of Database Interaction, design of software, software design and documentation tools.

### **Unit V: Quality assurance, maintenance and Audit**

**Hours 06**

Introduction to quality assurance, levels of quality assurance, the testing process with test data: Program testing, Link testing, Full system testing with live data.; Control: audit and security of information systems, why controls are needed, objectives of control, techniques used in control, auditing information systems security of information systems, maintenance, types of maintenance

### **Unit VI: Designing reliable system, training and conversion**

**Hours 05**

Introduction to software reliability, approaches of software reliability, user training, training methods and conversion, conversion methods.

### **Core Books:**

1. James A Senn : Analysis and Design of Information System, McGraw Hill International, 2003.
2. Kendall and Kendall : Systems analysis and Design, 5th Edition, Prentice-Hall of India Private Limited, 2003.

### **Reference Books:**

1. V. Rajaraman: Analysis and Design of Information Systems, Prentice-Hall of India Private Limited, 2003.
2. Jeffrey L. Whitten, Lonnie D. Bentley and Kevin C. Dittman : Systems Analysis and Design Methods, Tata McGraw Hill Publishing Co. Ltd., 2001.
3. Tuthill and Leavy : Knowledge Based Systems : Managers Perspectives : Tab professional and Reference Books, 1991.

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                                                                                                                                                             |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Understand the basics of system, type of information systems, system analyst-meaning, role and need, portfolio development of the system, the methods or ways to review and select the project.                                             |
| <b>CO2 :</b> | Understand the concept of SDLC, the fact finding techniques, detailed study of modern methods for collecting the requirements of system to be developed, Decision and procedure documentation and a brief introduction to the SRS document. |
| <b>CO3 :</b> | Learn the concept of structured analysis, detail study of DFD and its types and the study of data dictionary.                                                                                                                               |
| <b>CO4 :</b> | Gain understanding of prototypes, its uses and tools for development, clarification of the misconception about the prototype and categories of tools including the use of automated tools like case tools.                                  |
| <b>CO5 :</b> | Be able to learn objective of collecting data, methods to collect data for designing the input and output interface, the concept and objective of database design,                                                                          |
| <b>CO6 :</b> | Study the designing of reliable and maintainable systems, documentation tool, quality assurance management and need for user training.                                                                                                      |

## CA229: Fundamentals of Data Structures and Algorithms (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** CA123: Foundation of Programming, CA129: Fundamentals of OOP's

**Methodology & Pedagogy:** During the theoretical lectures, the focus will be on understanding the fundamental ideas of data structures and algorithms, as well as how to use and select the most efficient data structures from a variety of options for various applications. Designing, analyzing, and implementing all types of data structures for addressing computational issues using a high-level programming language is emphasized in practical sessions.

**Outline of the course:**

| Unit No. | Title of the Unit                              | Minimum Number of Hours |           |
|----------|------------------------------------------------|-------------------------|-----------|
|          |                                                | Theory                  | Practical |
| 1        | Introduction to Data Structures and Algorithms | 06                      | 36        |
| 2        | Linear Data Structures Stack and Queue         | 10                      |           |
| 3        | Dynamic Linear Data Structures                 | 09                      |           |
| 4        | Trees Data Structure                           | 08                      |           |
| 5        | Graph Data Structure                           | 08                      |           |
| 6        | Sorting and Searching                          | 07                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

### **Detail Syllabus:**

#### **Unit - I: Introduction to Data Structures and Algorithms** **Hours: 06**

Data type, Data object, Data Structure, Abstract Data type, Types of Data Structures, Introduction to Algorithms, Relationship among Data, Data Structures and Algorithms, Analysis of Algorithms, space and time complexity algorithm.

#### **Unit - II: Linear Data Structures Stack and Queue** **Hours: 10**

Linear Data Structures using sequential organization, Concepts of Ordered list, Representation of Stacks using sequential organization, Applications of Stack, Recursion, Application of Recursion, Concepts of Queues, Realization of Queues using sequential organization, Multiqueue, Deque, Priority Queue, Applications of Queue.

#### **Unit - III: Dynamic Data Structures** **Hours: 09**

Linked list, Comparison of sequential and linked organizations, Dynamic Memory Management, Single linked list, Double linked list, Applications of linked list.

#### **Unit - IV: Trees Data Structure** **Hours: 08**

Basic Terminologies, Definition and concepts, Representation of Binary Tree, Operations on Binary Tree, Types of Binary Trees, B Tree, B+ Tree Indexing, Trie Tree Indexing.

#### **Unit - V: Graph Data Structure** **Hours: 08**

Graph Terminology, Representation of Graph, Operations on Graph, Applications of Graph Structure.

#### **Unit - VI: Sorting and** **Hours: 07**

Sorting Notations and Concepts, Sorting Techniques, Sequential Searching, Binary Searching, Search Trees, Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques,

### **Core Books:**

1. Jean-Paul Tremblay, Paul G. Sorenson: An introduction to data structures with applications, 2nd Edition, Tata McGraw Hill Publications, Paperback.
2. Data structures A Programming Approach with C, D.S.Kushwaha and A.K.Misra, PHI
3. Varsha h. Patil, Data Structures Using C++, 1st Edition, Oxford University Press.
4. D. Samanta, Classic Data Structures, 2nd Edition, PHI Publications.

### **Reference Books:**

1. Yashvant Kanethkar : Data structures through C++, 2nd Edition, BPB Publications.
2. Yedidyah Langsam, Moshe J. Augenstein, Aaron M. Tenenbaum : Data structures using C and C++ , 2nd Edition, Eastern economy edition, Pearson Education, 2015.
3. Mark Allen Weiss: Data Structures and Algorithm Analysis in C++, 3rd Edition, Pearson Education, 2017.
4. Reema Thareja: Data Structures using C, 1st Edition, Oxford University Press, 2012.

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                             |
|--------------|-----------------------------------------------------------------------------|
| <b>CO1 :</b> | Design and apply appropriate data structures for solving computing problems |
| <b>CO2 :</b> | Understands and restates the fundamentals of basic data structures.         |
| <b>CO3 :</b> | Explore and implement linear data structures like link list                 |
| <b>CO4 :</b> | Students will familiar with non-linear data structure like tree and graph   |
| <b>CO5 :</b> | Apply Algorithm for solving problems like sorting, searching                |

**Course Outcomes Mapping:**

| Unit No. | Unit Name                                      | Course Outcomes |     |     |     |     |

## CA230: Fundamentals of Operating Systems (200 Marks)

**Contact Hours: 07**

**Pre-requisite: None**

**Methodology & Pedagogy:** In order to achieve the course objectives, students will be introduced to the basic operating system concepts and basic functions. During practical sessions, the students will be required to use DOS and UNIX commands to understand the system properties and to write script files.

### Outline of the course:

| Unit No. | Title of the Unit             | Minimum Number of Hours |           |
|----------|-------------------------------|-------------------------|-----------|
|          |                               | Theory                  | Practical |
| 1        | Operating System Fundamentals | 6                       | 36        |
| 2        | Memory Management             | 10                      |           |
| 3        | Processor Management          | 10                      |           |
| 4        | Device Management             | 8                       |           |
| 5        | File Management               | 6                       |           |
| 6        | Introduction to Shell Script  | 8                       |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

### Detailed Syllabus:

#### Unit - I: Operating System Fundamentals:

**Hours: 06**

What is an operating system, Brief history of an operating system, Pyramid structure of an operating system, Operating system hardware and software, Evolution of an operating system, types of operating system, Batch system, Interactive system, Real time system, Hybrid system, Shell, compiler, assembler, interpreter?

#### Unit - II: Memory Management:

**Hours: 10**

Memory management of early system, Fixed partition, Dynamic partition, Re-locatable dynamic partition, Best fit and first fit allocation method, De-allocation, Paged memory allocation, Demand paging allocation, segmented memory allocation, Virtual memory, cache memory, Associative memory, Page replacement policies.

**Unit - III: Processor Management:**

**Hours: 10**

What is job and Process, Multiprogramming concept, Process scheduler, Job scheduler, various process states, Thread control, Process Control Block (PCB), Processor scheduling policies, FCFS, SJN, SRT, RR, EDF, Multiple level queues

**Unit - IV: Device Management:**

**Hours: 08**

Types of devices, dedicated device, Virtual device, shared device, I/O devices in cloud, Sequential Access Storage Media, Direct access storage media, Device handler seek strategies, FCFS, SSTF, SCAN and LOOK strategies, Optical disk storage, RAID

**Unit - V: File Management:**

**Hours: 06**

Fundamentals of File management, File naming conventions, Fixed length and variable length records, Physical file organization, Physical storage allocation, File access methods, File control matrix, File compression

**Unit - VI: Introduction to Shell Script:**

**Hours: 08**

Shell Script, Shell environment, Making Script interactive, Command Line Argument, Evaluating Expression, Operator, Control Statement, Looping statement.

**Core Books:**

1. Ann McIver McHoes, Ida M Flynn: Understanding Operating System, 7<sup>th</sup> Edition, Cengage Learning, 2014
2. William Stallings: Operating Systems Internals and Design Principles, 5th Edition, PHI, 2005.
3. Sumitabha Das: Unix concepts & application, 4th Edition, Tata McGraw Hill, 2010.
4. Kenneth Rosen, Douglas Host, James Farber and Richard Rosinski: The Complete Reference, Tata McGraw Hill, 1999.

**Reference Books:**

1. Silberschatz: Operating System Concepts, 5th Edition, John Wiley & Sons (ASIA) Ltd., 2008.
2. Mark G. Sobell: A Practical Guide to Linux, Pearson Education, 1997.
3. K.J.George, Operating System Concepts and Principles, Sroff Publishers, 2003

### Web material:

1. Internet Search based May TED talks and other sources for videos, slide shares, problems, etc.

**Course Outcome (COs):** At the end of the course, the students will be able to

|            |                                                                                            |
|------------|--------------------------------------------------------------------------------------------|
| <b>CO1</b> | Demonstrate creativity in their day to day activities and academic output.                 |
| <b>CO2</b> | Solve personal, social and professional problems with a positive and an objective mindset. |
| <b>CO3</b> | Think creatively and work towards problem solving in a strategic way.                      |
| <b>CO4</b> | Initiate new and innovative practices in their chosen field of profession.                 |
| <b>CO5</b> | Give logical ideas, opinions, and solutions to problems.                                   |
| <b>CO6</b> | Think critically over the situation and drawing conclusion.                                |

## CA231: Fundamentals of Embedded System

(100 Marks)

**Contact Hours: 03**

**Pre-requisite: None**

**Methodology & Pedagogy:** In order to achieve the course objectives, students will be introduced to the basics of embedded system and its structure. Students will be introduced to various microcontrollers, analog and digital electronics components and sensors. Introduction to microcontroller based embedded system design with specifications, development and implementation will be explained. Students will also be introduced to basic programming of an embedded system.

**Outline of the course:**

| Week No | Practical                                                                                   | Description                                                                                                                                                                                                                             |
|---------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 - 2   | Introduction and demonstration to Embedded System                                           | Embedded System, Embedded System Basics, Embedded system hardware and Software, Basics of Processor and controllers, Types of controllers, Microcontroller and Microprocessor, Architecture of 8051 and Arduino controller.             |
| 3 - 4   | Introduction and demonstration to components used in embedded system using its applications | Introduction to bread board. LED, Switch, 7 segment LED display, Resistor, Capacitor, Inductor, Battery, Relay, Integrated Circuit, Potentiometer, DC and AC motor, Multi meter, Soldering iron, Sensor devices, Embedded applications. |
| 5 - 6   | Introduction of various software / online tools                                             | Keil software, Tinker cad simulator for arduino controller, Proteus simulator, PCB designing software.                                                                                                                                  |
| 7 - 8   | Basics of Embedded C Programming with controller                                            | Embedded C data types, variables, constants, operators, control statements, loops, string, array.                                                                                                                                       |
| 9 - 10  | GPIO Programming in embedded C                                                              | Interfacing various input / output components like LED, keypad matrix, push button switch, ON/OFF switch, toggle switch, 7 segment display and LCD display.                                                                             |
| 11 - 12 | Basics of Sensor Programming                                                                | Interfacing with various sensors like temperature sensor, PIR sensor and ultrasonic sensor.                                                                                                                                             |

## CA232: Foundation of Multimedia (100 Marks)

**Contact Hours:** 03

**Pre-requisite:** Basic Office Automation Skills.

**Methodology & Pedagogy:** This course is focuses on providing hands-on experience in designing and development of Multimedia components using text, images and videos with the emphasis on job profile of Digital Marketer. Students will understand color, positioning, and other aspects of usage of Multimedia on various social media.

**Outline of the course:**

| Week No | Practical                                        | Description                                                                                                                             |
|---------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 1 - 2   | Concept of colors, sizes, social media platforms | Students will learn about color combinations and some important tools/extensions, popular sizes used in various social media platforms. |
| 3 - 4   | Designing social media posts                     | Students will learn about designing social media post based on “Hook, Story and Offer”                                                  |
| 5 - 6   | Designing social media posts – carousal          | Students will learn about designing social media post for carousal for more attention.                                                  |
| 7 - 8   | Understanding Video creation and edit            | Students will learn about timeline, animation, transition, and editing of video                                                         |
| 9 - 10  | Creation of Portfolios                           | Students will learn to create portfolio for showcasing their creations when they start doing their own agencies.                        |
| 11 - 12 | Project based on learning                        | Students will do a small project based on whatever they have learned up to this.                                                        |

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                                                                  |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Be able to identify the basic concepts of multimedia and the web.                                                                                |
| <b>CO2 :</b> | Be able to use various multimedia tools.                                                                                                         |
| <b>CO3 :</b> | Be able to design and create social media posts using popular tools for various requirements.                                                    |
| <b>CO4 :</b> | Be able to design and create videos using popular tools for various requirements.                                                                |
| <b>CO5 :</b> | Apply end-user design skills of different requirements in creative industry of digital marketing and able to start own digital marketing agency. |

### Course Outcomes Mapping:

| Week No.     | Practical Title                                  | Course Outcomes |     |     |     |     |
|--------------|--------------------------------------------------|-----------------|-----|-----|-----|-----|
|              |                                                  | CO1             | CO2 | CO3 | CO4 | CO5 |
| <b>1-2</b>   | Concept of colors, sizes, social media platforms | ✓               |     |     |     | ✓   |
| <b>3-4</b>   | Designing social media posts                     |                 |     | ✓   |     | ✓   |
| <b>5-6</b>   | Designing social media posts – carousal          |                 |     | ✓   |     | ✓   |
| <b>7-8</b>   | Understanding Video creation and edit            |                 |     |     | ✓   | ✓   |
| <b>9-10</b>  | Creation of Portfolios                           |                 | ✓   | ✓   | ✓   | ✓   |
| <b>11-12</b> | Project based on learning                        | ✓               | ✓   | ✓   | ✓   | ✓   |

## CA 233: Software Engineering (100 Marks)

**Contact Hours: 4 Hours**

**Pre-requisite: Fundamentals of System Analysis and Design**

**Methodology & Pedagogy:** While learning this course, students can not only understand concepts of software and software engineering but also get familiar with concepts of project management and generation of SRS. Students can also realize significance of entire software development processes with the help of modern tools and techniques used in modeling a software project.

**Outline of the course:**

| Unit No. | Title of the Unit                                 | Minimum Number of Theory Hours |
|----------|---------------------------------------------------|--------------------------------|
| 1        | Introduction to software and Software Engineering | 07                             |
| 2        | Software Process Models                           | 09                             |
| 3        | Managing Software Projects                        | 08                             |
| 4        | Software Requirement analysis and specification   | 08                             |
| 5        | Software Maintenance and Risk Management          | 08                             |
| 6        | Modern methods in Software Engineering            | 08                             |

**Total Hours (Theory): 48**

**Total Hours:48**

**Detail Syllabus:**

**Unit I: Introduction to software and Software Engineering** **Hours 07**

Definition of Software, Types of Software, Nature of Software, Software Applications, Definition of Software Engineering, Software Engineering-A Layered Technology, A process framework.

**Unit II: Software Process Models** **Hours 09**

Definition of Software Process, Software Process Model - The Waterfall model, Incremental Process Models: The Incremental model, The RAD model Evolutionary Process models: Prototyping, The Spiral model, The Concurrent Development model, A final comment on evolutionary Processes, Component based development, Concept of Product and Process.

### **Unit III: Managing Software Projects**

**Hours 08**

The Management Spectrum, W5HH principles, Concepts of measures, metrics and indicators. Process Metrics and Project Metrics: An overview, Software Measurements: Size oriented and function oriented metrics.

### **Unit IV: Software Requirement analysis and specification**

**Hours 08**

Introduction to system and software requirements, types of software requirements: Functional and non-functional requirements. Requirement Specification (SRS), Requirement Analysis and Requirement Elicitation, Requirement Engineering.

### **Unit V: Software Maintenance and Risk Management**

**Hours 08**

Software risks, risk identification, risk projection, risk mitigation, monitoring and management. Introduction to software maintenance, types of maintenance. Concept of software reengineering, Business Process Reengineering(BPR), BPR life cycle, reverse engineering, Applications of Software Engineering.

### **Unit VI: Modern methods in Software Engineering**

**Hours 08**

Introduction to Agile development: What is Agility? principles and values of Agile development, concept of Extreme Programming, values of XP.

#### **Core Books:**

1. Roger S.Pressman, Software Engineering- A practitioner's Approach, McGraw-Hill International Editions
2. Grady Booch, James Rumbaugh, Ivar Jacobson: The Unified Modeling Language User
3. Rajib Mall, Fundamentals of software Engineering, Prentice Hall of India.

#### **Reference Books:**

1. Ian Sommerville, Software engineering, Pearson education Asia

## CA234: Advanced Database System (100 Marks)

**Contact Hours: 03**

**Pre-requisite:** Database Fundamentals.

**Methodology & Pedagogy:** During the practical session student will learn how to create table and perform operation on data and table using different oracle objects. Through procedure and function students can understand the concept of reusability. Student will learn how to handle error using exception and using trigger they can understand how to restrict the operation at particular time or given condition.

**Outline of the course:**

| Week No | Practical                                                              | Description                                                                      |
|---------|------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| 1 - 2   | Introduction to PL/SQL:                                                | Basic syntax of PL/SQL Block, Declaration of variable and constants, SELECT INTO |
| 3 - 4   | Procedural statements:                                                 | Usage of Conditional statements and Looping structure inside the block           |
| 5 - 6   | Implicit Cursor, Explicit Cursor, Parameterized Cursor:                | Usage of cursor and working                                                      |
| 7 - 8   | Objects of the database: User defined Function and Stored Procedure:   | Creations and usage of sub programs                                              |
| 9 - 10  | Error Handling using pre-defined exception and user-defined exception: | Runtime errors and handling those errors                                         |
| 11 - 12 | Row level and Statement level Trigger, GRANT & REVOKE:                 | Syntax of trigger and its working, Assign privileges at different level          |

**Total Hours (Practical): 36**  
**Total Hours: 36**

**Core Books:**

1. SQL, PL/SQL – The programming Language Oracle - by Ivan Bayross.
2. Teach Yourself Database Technologies - by Ivan Bayross

**Reference Books:**

1. Oracle 9i, PL/SQL Programming by Scoot Urban, Oracle Press
2. Practice book on SQL and PL/SQL by Anjali, Amisha, Roopal and Nirav publications

### Web References:

## CA235: Open Source Technology (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** Working knowledge of HTML and basic knowledge of MYSQL

**Methodology & Pedagogy:** During theory and practical sessions, students able to install & configure PHP and prerequisite software(s). Also, student will be emphasized to develop dynamic web applications.

**Outline of the course:**

| Unit Number | Title of the Unit                   | Minimum Number of Hours |           |
|-------------|-------------------------------------|-------------------------|-----------|
|             |                                     | Theory                  | Practical |
| 1           | Introduction to Open Source and Web | 08                      | 36        |
| 2           | PHP Configuration and Basics        | 07                      |           |
| 3           | Array and Functions in PHP          | 08                      |           |
| 4           | Handling Form Data                  | 08                      |           |
| 5           | PHP utilities                       | 09                      |           |
| 6           | Database Connectivity with MYSQL    | 08                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours:84**

**Detail Syllabus:**

### Unit I: Introduction to Open Source and Web

**Hours 08**

Introduction of open source software, Development philosophy of open source software, pros and cons of open source software, open source vs. close source software, Community support in open source, Version Control, Introduction to Webpage and Website, Static and Dynamic Website, Client & Server Side Scripting, Web Hosting: Shared / Cloud / VPS / Dedicated

### Unit II: PHP Configuration and Basics

**Hours 07**

Introduction to PHP, Installation of Apache, MySQL and PHP (OOP approach), How PHP code is parsed, Embedding PHP and HTML, Executing PHP and viewing in Browser, Data types, Operators, PHP variables: static and global variables, Comments in PHP, Conditional Structure, Looping Structure.

### Unit III: Array and Functions in PHP

Hours 08

Types of Array, Array Functions, Miscellaneous Functions: define, constant, include, require, header, die, exit, Overview of built in functions of PHP: Date and Time, Math functions, File handling functions, String functions, User Defined Functions.

### Unit IV: Handling Form Data

Hours 08

HTML Form element & its attributes, Send Form data using GET Method & POST Method, Receive Form data using \$\_GET, \$\_POST & \$\_REQUEST variables, PHP form validations

### Unit V: PHP utilities

Hours 09

File Uploading: Upload Single and Multiple file using PHP script, Understanding HTTP requests, Exploring and modifying HTTP responses, getting information from web server, Sending mails

### Unit VI: Database Connectivity with MYSQL

Hours 08

OOPs Concepts, PHP Data Objects (PDO), CRUD operations, Handling Errors, State Management Techniques: Concept of Session, starting session, modifying session variables, Un registering and deleting session variable, Concept of Cookies

### Core Books:

1. Vikram Vaswani, PHP: A Beginner's Guide: Indian Edition, First Edition, McGraw Hill, 2009
2. Matt Doyle , Beginning PHP 5.3 , Wrox , 2010

### Reference Books:

1. Timothy Boronczyk , Elizabeth Naramore, Jason Gerner, Yann Le Scouarnec, Jeremy Stolz, Michael K. Glass): Beginning PHP6, Apache, MySQL Web Development : Wrox , 2009.
2. Lynn Beighley and Michael Morrison, Head First PHP & MySQL, First Edition, O'Reilly Publication, 2009

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                        |
|--------------|--------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Gain the skills and knowledge for Open Source and Web Hosting.                                         |
| <b>CO2 :</b> | To utilize knowledge and skills for basics of PHP and configuration of MYSQL Server.                   |
| <b>CO3 :</b> | Learn the array and built-In functions in PHP.                                                         |
| <b>CO4 :</b> | Gain understanding of Form handing and utilities in PHP.                                               |
| <b>CO5 :</b> | Be able to develop dynamic web based application using PHP and MySQL with state management techniques. |

## CA236: Computer Network (100 Marks)

**Contact Hours:** 04

**Pre-requisite:** Basic knowledge of computer and its working.

**Methodology & Pedagogy:** During the lecture sessions, the students will learn about role of computer network in modern communication systems, underlying principles of network communication, need for standardization through network reference model. The teacher will also discuss communication issues at different layers and concepts related to network security.

### Outline of the course:

| Unit No. | Title of the Unit                | Minimum Number of Theory Hours |
|----------|----------------------------------|--------------------------------|
| 1        | Introduction to computer network | 07                             |
| 2        | Basics of network communication  | 08                             |
| 3        | Network reference model          | 10                             |
| 4        | Design issues in data link layer | 08                             |
| 5        | Design issues in network layer   | 08                             |
| 6        | Network security                 | 07                             |

**Total Hours (Theory): 48**

**Total Hours:48**

### Detail Syllabus:

#### Unit I: Introduction to computer network

**Hours 07**

Definition of computer network, aim and objective of computer network: applications of computer network, merits & demerits of computer network, examples of computer network, components of computer network, types of networks, network topologies, network devices: hub, switch, repeater, router, gateway, bridge.

#### Unit II: Basics of network communication

**Hours 08**

Parallel & serial communication, synchronous & asynchronous communication, modes of communication: simple, half-duplex, full-duplex, multiplexing, de-multiplexing: frequency division multiplexing (FDM), time division multiplexing (TDM), communication media: guided media, unguided media, switching techniques: circuit switching, message switching, packet switching.

#### Unit III: Network reference model

**Hours 10**

Need for network reference model, history of TCP/IP and OSI model, layers of OSI and TCP/IP model, comparison between TCP/IP and OSI model, Protocol Hierarchy, Network Protocols: Simple Mail Transfer Protocol (SMTP), File Transfer Protocol (FTP), Multiple Internet Mail Extension (MIME), Post Office Protocol (POP), Telnet, Domain Name Service (DNS), Dynamic

Host Configuration Protocol (DHCP), Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (RARP).

#### **Unit IV: Design issues in data link layer**

**Hours 08**

Services provided to the network layer, framing, error control (error detection and correction code), flow control, data link layer in the internet (Serial Line Internet Protocol, Point-to-Point Protocol).

#### **Unit V: Design issues in network layer**

**Hours 08**

Routing Algorithms, Congestion Control Policies, Concept of Internetworking.

#### **Unit VI: Network security**

**Hours 07**

Introduction to cryptography, symmetric key and public key encryption systems, digital signature and key management concepts, communication security.

#### **Core Books:**

1. Andrew S. Tanenbaum: Computer networks, 4th Edition, Pearson Publication: 2019.
2. Behrouz Forouzan: Data communications and networking, 4th Edition, McGraw Hill, 2018.
3. William Stallings: Data and computer communication: 5<sup>th</sup> Edition, Pearson Publication, 2019.

#### **Reference Books:**

1. James F. Kurose, Keith W. Ross: Computer networking – A top down approach: 3<sup>rd</sup> Edition: Pearson Publication: 2017
2. Narsimha Karumanchi: Elements of computer networking: An Integrated Approach: 1<sup>st</sup> Edition: Careermonk Publication: 2014
3. Ed Tittel: Computer networking: 1<sup>st</sup> Edition, Schum's Publication: 2020

#### **Web References:**

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                           |
|--------------|-------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Student will be able to understand role of computer network in digital communication      |
| <b>CO2 :</b> | Student will grasp underlying concepts related with network communication.                |
| <b>CO3 :</b> | Student will understand role of reference models in standardizing communication           |
| <b>CO4 :</b> | Students will learn about intra and inter network communication and technology behind it. |
| <b>CO5 :</b> | Students will learn about different aspects of network security.                          |

### Course Outcomes Mapping:

## **HS111.02 C: HUMAN VALUES & PROFESSIONAL ETHICS (100 Marks)**

**Contact Hours: 03**

**Pre-requisite courses:** Ethical Leadership through Giving Voice to Values

(<https://www.coursera.org/learn/uva-darden-giving-voice-to-values?skipBrowseRedirect=true>)

### **Outline of the Course:**

| <b>Unit. No.</b> | <b>Title of the unit</b>                 | <b>Minimum number of hours</b> |
|------------------|------------------------------------------|--------------------------------|
| 1.               | Introduction to Values and Ethics        | 05                             |
| 2.               | Elements and Principles of Values        | 08                             |
| 3.               | Applied Ethics                           | 08                             |
| 4.               | Value, Ethics & Global Issues            | 05                             |
| 5.               | Contemporary Issues in Values and Ethics | 04                             |

**Total Hours (Practical): 30**

**Total Hours: 30**

### **Detailed Syllabus:**

|                  |                                                                                                                                           |                  |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Unit – I</b>  | <b>Introduction to Values and Ethics</b><br>Need, Relevance and Significance of Values General, Concept and Meaning of Values and Ethics  | <b>Hours: 05</b> |
| <b>Unit – II</b> | <b>Elements and Principles of Values</b><br>Universal & Personal Values, Social, Civic & Democratic Value                                 | <b>Hours: 08</b> |
| <b>Unit –III</b> | <b>Applied Ethics</b><br>Universal Code of Ethics, Professional Ethics, Organizational Ethics, Ethical Leadership, Domain Specific Ethics | <b>Hours: 08</b> |
| <b>Unit – IV</b> | <b>Value, Ethics &amp; Global Issues</b><br>Cross-Cultural Issues, Role of Ethics & Values in Sustainability                              | <b>Hours: 05</b> |
| <b>Unit – V</b>  | <b>Contemporary Issues in Values and Ethics</b><br>Case Studies, Presentations, Projects                                                  | <b>Hours: 04</b> |

**Course Outcome (COs):** At the end of the course, the students will be able to

|     |                                                                                                                                |
|-----|--------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Understand the concepts and mechanics of values and ethics.                                                                    |
| CO2 | Understand the significance of value and ethical inputs in and get motivated to apply them in their life and profession.       |
| CO3 | Understand the significance of value and ethical inputs in and get motivated to apply them in social, global and civic issues. |
| CO4 | Develop their responsibility towards society.                                                                                  |
| CO5 | Comprehend their own core values and adhere to those values at their workplace.                                                |
| CO6 | Practice Ethical Leadership.                                                                                                   |

## CA324: Document Databases (200 Marks)

### Contact Hours: 07

**Pre-requisite:** Should know that Database Management Systems, Database and Data Structure concepts

**Methodology & Pedagogy:** During theory lectures student will understand that what is difference between SQL and NoSQL i.e. Document Database, the essential concepts that act as the building blocks for many of the NoSQL products. It starts from the fundamentals of NoSQL and graduates to advanced concepts of architecture, storage internals and indexing. During Practical sessions, students will be required to design and create an applications using NoSQL Databases.

### Outline of the Course:

| Unit No. | Title of the Unit                         | Minimum Number of Hours |           |
|----------|-------------------------------------------|-------------------------|-----------|
|          |                                           | Theory                  | Practical |
| 1        | Introduction to Document Database (NoSQL) | 07                      | 36        |
| 2        | Data Models in NoSQL                      | 08                      |           |
| 3        | Storage Replica of NoSQL                  | 09                      |           |
| 4        | Working with Document Data using MongoDB  | 08                      |           |
| 5        | Executing CRUD operation using MongoDB    | 08                      |           |
| 6        | Managing Database using MongoDB           | 08                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

### Detail Syllabus:

#### Unit I: Introduction to Document Database (NoSQL)

**Hours 07**

Introduction to SQL Relational Model, Codd Rules, Overview of Normalization, Overview and History of NoSQL Databases, Taxonomies by Data Model, Overview of No-SQL Storage: Key Value, Document-Oriented, Column-Family and Graph-storage. Difference Between SQL and NoSQL, Techniques and Pattern: CAP Theorem, ACID Vs. BASE properties and Comparison of relational databases to new NoSQL stores.

## **Unit II: Data Models in NoSQL**

**Hours 08**

Different Types of Database System to use Document Database by using MongoDB, Cassandra, HBASE, Neo4j use and deployment, Features and Application, Limitation and Challenges to use NoSQL approach, Key-Value and Document Data Models, Column-Family Stores, Aggregate-Data Model. Overview of Replication and Sharding, Overview of Map Reduce on databases. Distribution Models, Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication.

## **Unit III: Storage Replica of NoSQL**

**Hours 09**

Working with Column-Oriented Databases, Document Store, Key Value Store and Graph data storage. Using Tables and Columns in Relational Databases, Contrasting Column Databases with RDBMS, Document Store Internals, Instructions for Using Collections and Indexes in MongoDB, MongoDB Reliability and Durability, Horizontal Scaling.

## **Unit IV: Working with Document Data using MongoDB**

**Hours 08**

Overview of MongoDB, Document Databases, What Is a Document Database? Advantages and Disadvantages of Document Database, Installing MongoDB on Your System, Running MongoDB, Installing Additional Drivers, Introduction to MongoDB key features, Core Server tools, MongoDB through the JavaScript's Shell and others.

## **Unit V: Executing CRUD operation using MongoDB**

**Hours 08**

Navigating your databases, viewing available data and collections, inserting data, querying data, using sort, limit and skip functions, retrieving single document, using aggregation commands and constraints, working with condition, updating data, insert and save command, rename a collection, referencing a database

## **Unit VI: Managing Database using MongoDB**

**Hours 08**

MongoDB server, backup a single database, single collection, restoring the collection, importing data into Mongo-DB, exporting data from MongoDB, securing with authorization your data, restricting access, protecting your server with authentication.

### **Core Books:**

4. NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence, Author: Sadalage, P. & Fowler, Publication: Pearson Education.

### **Reference Books:**

1. Redmond, E. & Wilson, Author: Seven Databases in Seven Weeks: A Guide to Modern Databases and the NoSQL Movement Edition: 1st Edition.
2. Getting started with NOSQL by Gaurav Vaish, PACKT.
3. Guy Harrison, Next Generation Database: NoSQL and big data, Apress.
4. Definite Guide to MongoDB by Eelco Plugge, Peter Membrey and Tim Hawkins, Apress.
5. NOSQL theory and Examples by Piotr fulmanski, Simple introduction series: e-book.

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                                            |
|--------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Able to understand the difference between SQL and NoSQL, needs and what is NoSQL                                           |
| <b>CO2 :</b> | Able to compare, define and use the four types of NoSQL Databases.                                                         |
| <b>CO3 :</b> | Able to demonstrate an understanding of the detailed architecture, define objects, load the data, and execute the data     |
| <b>CO4 :</b> | Able to implement various column store internals and design Schema, implement CRUD operations, distributed data operations |
| <b>CO5 :</b> | Able to create and use an Application with Graph Data model                                                                |

## CA325: Foundation of Data Science (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** CA130- Database Fundamentals

**Methodology & Pedagogy:** During theory sessions topics related to Data Science will be covered with suitable examples. During Practical Sessions, students will be required to develop small applications related to reading, cleaning, analysis and visualization. Student will also get exposure of model building using machine learning algorithms. Student will get in-depth knowledge of Data Science based real applications using case study approach.

**Outline of the course:**

| Unit No. | Title of the Unit                           | Minimum Number of Hours |           |
|----------|---------------------------------------------|-------------------------|-----------|
|          |                                             | Theory                  | Practical |
| 1        | Overview of Data Science                    | 07                      | 36        |
| 2        | Mathematics and Statistics in Data Science  | 09                      |           |
| 3        | Data Collection and Preparation             | 08                      |           |
| 4        | Data Plotting and Visualization             | 08                      |           |
| 5        | Machine Learning for Data Science           | 10                      |           |
| 6        | Data Science Applications and future trends | 06                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detailed Syllabus:**

**Unit -I: Overview of Data Science**

**Hours: 07**

Introduction to Data Science, Definition and description of Data Science, history and development of Data Science, Need of Data Science, Data Science Process, Prerequisites for Data Scientist, Components of Data Science, Tools and Skills needed.

**Unit -II: Mathematics and Statistics in Data Science**

**Hours: 09**

Linear Algebra, Calculus, Descriptive and Inferential Statistics, Central Tendency, Measure of Variability, Probability, Implementation using Python.

**Unit -III: Data Collection and Preparation****Hours: 08**

Introduction to Data Preprocessing, Data types and forms, Possible data error types, Consistent Data,

Data Cleaning - Filling Missing Values, smoothing noisy data, Detecting and removing outliers, Data Integration, Data transformation- Rescaling, Normalizing data, Standardizing data, Implementation Using Python.

**Unit -IV: Data Plotting and Visualization****Hours: 08**

Introduction to Data Visualization, Visual encoding, Basic plots using Python, Data Visualization libraries in Python.

**Unit -V: Machine Learning for Data Science****Hours: 10**

Overview of Machine Learning- Supervised, Unsupervised, Semi-Supervised and Reinforcement Learning

Regression Methods – Simple Linear Regression, Multiple Linear Regression, Classification Methods- Logistic Regression, Naïve Bayes, Clustering Method- k-means clustering

**Unit -VI: Data Science Applications and future trends****Hours: 06**

Applications- Manufacturing, Personalization, Medical Image Analysis, Internet Search, Genomics, Speech Recognition, Advertising, Financial Fraud Detection, Airline Route Planning, Cyber-threats, transportation, gaming, recommendation system

**Core Books:**

## **CA326: Advanced Embedded Programming (200 Marks)**

**Contact Hours: 07**

**Pre-requisite: CA231: Fundamentals of Embedded Programming**

**Methodology & Pedagogy:** In order to achieve the course objectives, students will be introduced to advanced concepts of embedded system and its structure. Students will be introduced to various microcontrollers like nodeMCU, Raspberry PI and ESP32 which can be used to design IOT system. Introduction to IOT system design with specifications, development and implementation will be explained. Students will also be introduced to basic IOT programming of an embedded system.

**Outline of the course:**

| Unit No. | Title of the Unit                                       | Minimum Number of Hours |           |
|----------|---------------------------------------------------------|-------------------------|-----------|
|          |                                                         | Theory                  | Practical |
| 1        | Emerging trends in Embedded system and its applications | 06                      | 36        |
| 2        | Wireless Communications using Arduino                   | 08                      |           |
| 3        | Advanced GPIO Programming in embedded                   | 08                      |           |
| 4        | Introduction to Raspberry Pi                            | 08                      |           |
| 5        | Introduction to Python Programming Language             | 10                      |           |
| 6        | RTOS: Operating System for Embedded System              | 08                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detail Syllabus:**

**Unit I: Emerging trends in Embedded system and its applications**

**Hours 06**

Patterns insight from the applications of embedded systems in real life, Multicore in embedded, embedded operating systems. Embedded digital security and surveillance. Convergence embedded systems and applications. Healthcare, Automotive, Entertainment, Localization and internationalization, Real Time Applications of Embedded Systems

**Unit II: Wireless Communications using Arduino**

**Hours 08**

Introduction to Wireless Devices, Interfacing GSM & GPS Module with Arduino, Interfacing Bluetooth Module with Arduino.

---

**Unit III: Advanced GPIO Programming in embedded** **Hours 08**

Character LCD 16x2 interfacing logic and concept, Introduction of LCD command and data signals, LCD based programming, Serial Communication programming

**Unit IV: Introduction to Raspberry Pi** **Hours 08**

Introduction to Raspberry Pi, Why Raspberry pi, Features of Raspberry pi, Basic set up and first boot configuration, Different uses of Raspberry pi, Different Versions of Raspberry pi, Vision of Raspberry pi, Different components of the Board.

**Unit V: Introduction to Python Programming Language** **Hours 10**

Variables and Numbers, Looping Structures, Conditional Statements, Lists, Tuples and Dictionaries, Type Conversions, Function declaration, calling functions and passing values, Function Returning values. Exiting from functions, Reading/Writing to File.

**Unit VI: RTOS: Operating System for Embedded System** **Hours 08**

Inter process communication, RTOS, Classification of RTOS, Difference between GPOS and RTOS, Service provided by RTOS, Features of RTOS. Selection of RTOS, Impacts of RTOS on development of the design, RTOS Architecture, Multitasking, Process life cycle, Task States, Context Switch, Scheduling, Algorithm, shared memory problem.

## CA327: Object Oriented Programming using JAVA (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** Basic Knowledge of Introduction to Programming in C and OOPs concepts.

**Methodology & Pedagogy:** During theory lectures illustrations emphasizing the need for Object Oriented Programming concepts will be discussed. Emphasize will be given on Core Java concepts, various Java packages, Multithreading and Collection Frameworks. During Practical sessions, students will be required to develop different Java programs, develop simple to intermediate level applications on Java platform.

**Outline of the course:**

| Unit No. | Title of the Unit                                   | Minimum Number of Hours |           |
|----------|-----------------------------------------------------|-------------------------|-----------|
|          |                                                     | Theory                  | Practical |
| 1        | Introduction to Object Oriented Programming in Java | 07                      | 36        |
| 2        | Fundamental programming structures in java          | 08                      |           |
| 3        | Inheritance, Abstract class, and Interface          | 09                      |           |
| 4        | Packages and Wrapper Classes                        | 08                      |           |
| 5        | Exception handling and Multithreading               | 08                      |           |
| 6        | Basics of Collections Framework                     | 08                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detailed Syllabus:**

**Unit - I: Introduction to Object Oriented Programming in Java**

**Hours 07**

Programming Paradigms (Procedure Oriented and Object Oriented), Object Oriented Programming concepts, comparison of POP and OOP, Introduction to Java programming language, History of Java, Features of Java, Structure of Java program, creating an application in Java, Compiling and executing applications in java, command line arguments.

**Unit - II: Fundamental programming structures in java**

**Hours 08**

Data types, Variables, Literals, Control & Looping Structure, break, continue and return, Arrays, for-each loop, defining a class in Java, creating objects, Instance variables, methods, and its overloading, use of toString (), method of String class, Constructors and its overloading, this keyword, Objects as Parameters, returning objects, static members, Initializer blocks, Garbage collection and finalize method.

**Unit - III: Inheritance, Abstract class, and Interface**

**Hours 09**

Inheritance and its types, method overriding, final keyword, super keyword, Abstract class and abstract methods, Interfaces, Runtime Polymorphism, Introduction to Anonymous Class.

**Unit - IV: Packages and Wrapper Classes**

**Hours 08**

Defining a Package, finding packages and CLASSPATH, Important of Packages, Access protection, importing packages, Wrapper Classes, Boxing and Unboxing conversions.

**Unit - V: Exception handling and Multithreading**

**Hours 08**

Fundamentals of Exception Handling, Types of Exceptions, keywords used in Exception handling, Multiple catch clauses, Nested try Statements, Java Built in Exceptions, User Defined Exceptions, The Java Thread Model, creating a thread, Creating Multiple Threads, Thread class and the Runnable Interface, Priorities, synchronization, Inter thread communication.

**Unit - VI: Basics of Collections Framework**

**Hours 08**

The Collections Framework Overview, Collection Interfaces- Collections, List, Set, Sorted Set, Deque, The Collection classes- Array List, Linked List, Vector, Hash Set, Tree Set, Priority Queue. Accessing a collection using an Iterator, ListIterator and Enumeration, Map Interfaces and Classes: Map, Map Entry, SortedMap, and NavigableMap, HashMap, LinkedHashMap, TreeMap, Comparable & Comparator Interface.

**Core Books:**

1. Pravin M. Jain: The class of JAVA, Pearson Education, 2011.
2. Herbert Schildt: The Complete Reference Java J2SE, 5th Edition, TMH Publishing Company Ltd, New Delhi.

**Reference Books:**

1. Ivor Horton: Beginning Java JDK, 5th Edition, Wiley Press, 2008.
2. Cay Horstmann and Gary Cornell: Core Java Volume 1, 8th Edition or later, Pearson Education, 2008.
3. Ken Arnold, James Gosling and David Holmes: The Java Programming Language, 4th Edition, Addison Wesley.

## CA328: Fundamentals of Visual Programming (200 Marks)

**Contact Hours: 07**

**Pre-requisite:** Basic knowledge of programming language.

**Methodology & Pedagogy:** During theory lectures illustrations emphasizing the need for advanced features of .Net framework and to develop windows and web based application using C# language will be given. During Practical sessions, students will be required to develop Web Applications and Desktop Applications using concepts discussed during class.

**Outline of the course:**

| Unit No. | Title of the Unit                              | Minimum Number of Hours |           |
|----------|------------------------------------------------|-------------------------|-----------|
|          |                                                | Theory                  | Practical |
| 1        | Introduction to .NET framework                 | 07                      | 36        |
| 2        | Basics of Object Oriented programming using C# | 09                      |           |
| 3        | Building desktop application                   | 08                      |           |
| 4        | Web programming fundamentals                   | 08                      |           |
| 5        | Database connectivity through ADO.NET          | 08                      |           |
| 6        | Building WPF application                       | 08                      |           |

**Total Hours (Theory): 48**

**Total Hours (Lab): 36**

**Total Hours: 84**

**Detail Syllabus:**

### **Unit I: Introduction to .NET framework**

**Hours 07**

Introducing .NET Framework, .NET Framework Component, .NET Framework Version Compatibility, Core of .NET Framework: Application Services, Base Class Library and CLR, Types of Applications which can be developed using MS.NET, MS.NET Base Class Library, MS.NET Namespaces, The Common Language Runtime (CLR) , Managed Code , MS.NET Memory Management / Garbage Collection , Common Type System (CTS), Common Language Specification (CLS) , Types of JIT Compilers

### **Unit II: Basics of Object-Oriented programming using C#**

**Hours 09**

Overview of Object-Oriented Programming, Principles of Object Orientation programming: Encapsulation, inheritance, polymorphism, Object, Defining Properties, Using Auto- Implemented Properties, Defining Methods, Understanding Constructors, Extending .NET Classes via Inheritance, Defining and Implementing Interfaces, Understanding the Role of Interfaces in .NET.

C# Datatypes & Variables Declaration, Implicit and Explicit Casting, Checked and Unchecked Blocks – Overflow Checks, Casting between other datatypes, Boxing and Unboxing, Enum and Constant, Operators, Control Statements, Working with Arrays, C# Application Basics: Command line and VS.NET compilation.

### **Unit III: Building desktop application**

**Hours 08**

Building Windows Forms Applications, Setting Form Properties, Understanding the Life-cycle of a Form, Using the Windows Forms Designer, MessageBox Class and .config File, Working with Windows Forms Controls: TextBox, Button, Selection, List, Container, Image, ErrorProvider, TooltipProvider, etc. Handling Events: Understanding the Event-Driven Programming Model, Writing Event Handlers, Sharing Event Handlers.

### **Unit IV: Web programming fundamentals**

**Hours 08**

Basic of Http Request and Http Response. Understand form Tag and Comparison between Get and Post. ASP.NET Page Life Cycle. Structure of an ASP.NET Page: ASPX Page, Code behind File, WebConfig and machine config, Rich Web Control, Validation Controls, Concept of custom control.

### **Unit V: Database connectivity through ADO.NET**

**Hours 08**

Evolution of ADO.NET, Understanding the ADO.NET Object Model, Connected vs. Disconnected Access, Use of Connection, Command, DataReader, DataAdapter and Dataset class.

### **Unit VI: Building WPF application**

**Hours 08**

Overview of WPF, Features of WPF, Windows Forms vs WPF, Introduction to XAML, WPF Layout: Grid Panel, Stack Panel, Dock Panel, Wrap Panel and Canvas Panel, WPF Controls: TextBlock, PasswordBox, ListBox, Slider, Popup, Menus and Expander.

### **Core Books:**

1. Christian Nagel : Professionals C# and .NET 2021 Edition , Wiley – India, WROX
2. Albahani Josheph: C# 4.0 Pocket Reference, Shroff publication, 2010

### **Reference Books:**

1. Jon Skeet, C# in Depth, Managing Publication, 2010
2. Drayton David: C# Language Pocket Reference, Shroff publication, 2005

### **Web References:**

1. <http://csharp.net-informations.com/> [to learn C# and .NET fundamentals]
2. <http://www.wpftutorial.net/> [to learn WPF]

**Course Outcomes:** Upon successful completion of the course, students will be,

|              |                                                                                                    |
|--------------|----------------------------------------------------------------------------------------------------|
| <b>CO1 :</b> | Understanding .NET Framework core features and Components.                                         |
| <b>CO2 :</b> | To develop object oriented programming skills using C#.                                            |
| <b>CO3 :</b> | To develop windows and web based application using core feature of .NET framework and C# language. |
| <b>CO4 :</b> | Access and manipulate data in a Microsoft SQL Server database by using Microsoft ADO.NET.          |
| <b>CO5 :</b> | Use modern approach to build windows based application using WPF.                                  |

### Course Outcomes Mapping:

# CA329: Introduction to Multi-Paradigms Programming language (100 Marks)

**Contact Hours: 03**

**Pre-requisite courses:** CA123: Foundation of Programming, CA129: Fundamentals of Object Oriented Programming.

**Methodology & Pedagogy:** During the practical session student will learn how to write Python Programs and then start implementing various programming constructs. Through the implementations of various datatypes implementation student's will realize significance of high level language. Student will learn how to create user defined function and using them. Under object oriented programming students will learn creation of class, instance and implementation of inheritance.

## Outline of the Course:

| Week No | Practical                                                                                                                                                                                                        | Description                                                                                                                                                                                                                         |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1- 2    | Introduction to Python:<br>Running Python, Python Documentation, Python Basics- The print statement, comment, statements and syntax, variable assignments, identifier.<br>Python standard types: Number, String. | Students can learn executing first program of Python. Students start familiar with printing statement in Python, declaring variable and also valid identifier in Python. Then Students will learn Number and String type in Python. |
| 3 - 4   | Conditional and looping statements in Python: If - else, if-elif-ilse, conditional expressions, while, for, break, continue, pass.                                                                               | Usage of Conditional statements and Looping statements.                                                                                                                                                                             |
| 5 - 6   | Python Sequence types: List, Tuple, Dictionary, Set                                                                                                                                                              | Implementations of sequence types List, tuple, dictionary and set with built-in functions and various operations.                                                                                                                   |
| 7 - 8   | Functional Programming: Creating function, Calling function, different types of arguments, Scope of variables.                                                                                                   | Creating and using functions with different types of arguments and scope of variable.                                                                                                                                               |
| 9 - 10  | Object Oriented Programming: Class, Class attributes, Instance, instance attributes, bind                                                                                                                        | Crating class, instantiating class, defining various members of class. Implementing                                                                                                                                                 |

|         |                                                                           |                                                                                                                                                                                    |
|---------|---------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | and class methods, abstraction, encapsulation, polymorphism, inheritance. | constructor. Developing programs using OOPS concepts.                                                                                                                              |
| 11 - 12 | Various important package coverages:<br>Numpy and Pandas.                 | Introducing concept of data frame and its usage: Reading csv file, manipulating data frame and performing various operations on it using Pandas. Working with arrays using numpy . |

**Total Hours (Practical): 36**

**Total Hours: 36**

3. [http://people.cs.aau.dk/~normark/prog303/html/notes/paradigms\\_themesparadigmoverview-section.html](http://people.cs.aau.dk/~normark/prog303/html/notes/paradigms_themesparadigmoverview-section.html) [Overview of Programming Paradigms]
4. <https://docs.python.org> [Python Documentation]

**Course Outcome (COs):** At the end of the course, the students will be able to

|     |                                                                                                                    |
|-----|--------------------------------------------------------------------------------------------------------------------|
| CO1 | Able to understand execute python program and implementation of basic number and string types supported by Python. |
| CO2 | Able to learn programming constructs, conditional statements and looping statements.                               |
| CO3 | Able to implement list, tuple, dictionary and set types supported by Python.                                       |
| CO4 | Able to create functions and implement object oriented programming in Python.                                      |
| CO5 | Able to use packages numpy and pandas in Python.                                                                   |

**Course Outcomes Mapping:**

| Week No. | Practical Title                              | Course Outcomes |     |     |     |     |

## HS131.02 C: Communication and Soft skills (100 Marks)

### Credits and Hours:

| Teaching Scheme | Theory | Practical | Tutorial | Total | Credit    |
|-----------------|--------|-----------|----------|-------|-----------|
| Hours/week      | --     | 30/15     | --       | 30/15 | <b>02</b> |
| Marks           | --     | 100       | --       | 100   |           |

### Pre-requisite courses:

- Communicative English

### Outline of the Course:

| Sr. No. | Title of the unit                                    | Minimum number of hours |
|---------|------------------------------------------------------|-------------------------|
| 1.      | An Introduction to Communication                     | 06                      |
| 2.      | Cross-cultural Communication and Globalization       | 03                      |
| 3.      | Communication for Career Building                    | 10                      |
| 4.      | Group Dynamics and Soft Skills                       | 05                      |
| 5.      | Effective Presentation Strategies                    | 04                      |
| 6.      | Contemporary Issues in Communication and Soft Skills | 02                      |
|         | Total hours (Theory) :                               | --                      |
|         | Total hours (Practical) :                            | 30                      |
|         | Total hours :                                        | 30                      |

### Detailed Syllabus:

|    |                                                                                                                                                                                                                                                                  |          |     |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-----|
| 1. | An Introduction to Communication                                                                                                                                                                                                                                 | 06 Hours | 20% |
|    | Basics of Communication: Origin, Concept, Process, Levels, Principles and Barriers; Applications of Communication; Rhetoric in Professional Communication; Importance of Ethos, Logos, and Pathos in Communication                                               |          |     |
| 2. | Cross-cultural Communication and Globalization                                                                                                                                                                                                                   | 03 Hours | 10% |
|    | Basic Concepts: Culture, Globalization and Cross-cultural Communication; Social and People Skills; Communicating with People of Different Cultures; Conflicts in Cross-cultural Communication and Tactics / techniques to resolve them; Persuasive Communication |          |     |
| 3. | Communication for Career Building                                                                                                                                                                                                                                | 10 Hours | 33% |
|    | Cover Letters and Resume; E-mail and Report; Types of Resume; Concept and Rationale of Group Discussion Skills and Aspects assessed in Group Discussion; Concept and Rationale of Personal Interview; Types of Personal Interview; Writing Statement of Purpose  |          |     |
| 4. | Group Dynamics and Soft Skills                                                                                                                                                                                                                                   | 05 Hours | 17% |
|    | An Introduction to Group Dynamics and Soft Skills; Groups and their Structures; Roles and Functions of Members in Groups; Conflict Management; Aptitude and Attitude; Various Intelligences; Developing an Open Mindset                                          |          |     |
| 5. | Effective Presentation Strategies                                                                                                                                                                                                                                | 04 Hours | 14% |
|    | Designing Appealing Presentation; Audience Analysis and Supporting Material; Presentation Mechanics and Presentation Process; Managing Yourself during Q and A Session; Fundamentals of Persuasion                                                               |          |     |
| 6. | Contemporary Issues in Communication and Soft Skills                                                                                                                                                                                                             | 02 Hours | 06% |
|    | Trends and Practices in Communication, Case Studies                                                                                                                                                                                                              |          |     |

3. <https://www.futurelearn.com/courses/workplace-englis>

**Course Outcome (COs):** At the end of the course, the students will be able to

|     |                                                                                                                             |
|-----|-----------------------------------------------------------------------------------------------------------------------------|
| CO1 | Gain thorough understanding and proficiency in various Professional Communication Skills.                                   |
| CO2 | Develop awareness and competence in cross-cultural communication in their personal, academic and professional environments. |
| CO3 | Develop business writing and presentation skills to succeed in career.                                                      |
| CO4 | Develop soft skills to stand out and take their career to the next level.                                                   |
| CO5 | Develop various intelligences and open Mindset to function in multi-disciplinary and cross-cultural work environment.       |
| CO6 | Practice new trends in communication in multiple perspectives at personal, professional, and social level.                  |

## CA330: Basics of Mobile Applications (200 Marks)

**Contact Hours: 06**

**Pre-requisite:** Object Oriented Programming using JAVA

**Methodology & Pedagogy:** During theory lectures illustrations emphasizing the need for basic features of Mobile Computing and Android- the Mobile Application Development platform will be given. During Practical sessions, students will be required to develop Mobile Application using JAVA programming language in Android. Student shall also develop applications with elegant user interface that deal with data storage, documents sharing among applications.

### Outline of the course:

| Unit No. | Title of the Unit                                  | Minimum Number of Hours |           |
|----------|----------------------------------------------------|-------------------------|-----------|
|          |                                                    | Theory                  | Practical |
| 1        | Introduction Android and Android Development tools | 07                      | 36        |
| 2        | User Interface – I                                 | 06                      |           |
| 3        | User Interface - II                                | 06                      |           |
| 4        | Material Design                                    | 05                      |           |
| 5        | Application Data Handling                          | 07                      |           |
| 6        | Web Services                                       | 05                      |           |

**Total Hours (Theory): 36**

**Total Hours (Lab): 36**

**Total Hours: 72**

### Detail Syllabus:

#### **Unit I: Introduction Android and Android Development tools** **Hours 07**

Introduction to Mobile Applications and Android, Basics of Kotlin, setting up development environment, Dalvik Virtual Machine, Android Application Structure, DDMS, Android Manifest File, Gradle, Android permissions, APK, Basic Building blocks – Activities, Services, Broadcast Receivers & Content providers

#### **Unit II: User Interface – I** **Hours 06**

Working with Containers: LinearLayout, RelativeLayout, TableLayout, ScrollView, and FrameLayout, Fragment, Views: Toast, TextView, EditText, Button, ImageButton, CheckBox, ToggleButton, RadioButton, RadioGroup, ProgressBar, AutoComplete TextView, Components for communication -Intents & Intent Filters Intents: Explicit Intents, Implicit Intents, switching

---

between activities and passing data between activities using Intents, Logging

**Unit III: User Interface - II****Hours 06**

Calendar: Manage Date and Time, Adapters: ArrayAdapter, BaseAdapter ListView and ListActivity, GridView, Gallery Menus: Option menu, Context menu, Sub menu Tabs and TabActivity Alert Dialogs, Android Toolbar

**Unit IV: Material Design****Hours 05**

Android Design Support Library, Vector Drawables, Basics of material design components and principles, Android styles and themes, Animations and Transitions

**Unit V: Application Data Handling****Hours 07**

Basics of Storage in Android, Shared Preference: Save key-value data, Store Data in Database, store data in a firebase, save files on Device, Sharing of data

**Unit VI: Web Services****Hours 05**

Working with Web Service in Android, Deploying Web Service

**Core Books:**

1. Wei-Meng Lee: Beginning Android 4 Application Development, Wiley India Pvt Ltd.
2. Reto Meier: Professional Android 2 Application Development, Wrox publication
3. Mark L. Murphy: The Busy Coder's Guide to Android Development

**Reference Books:**

## CA331: Software Testing (100 Marks)

**Contact Hours: 3 Hours**

**Pre-requisite courses:** Object oriented programming concepts.

**Methodology & Pedagogy:** The practical sessions will cover the software testing concepts and practices that support the production of quality software. The practical sessions will cover the application of testing techniques at various levels of testing using manual and automated testing tools.

### Outline of the Course:

| Week No | Practical                                                                                                                             | Description                                                                                                                                     |
|---------|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 - 2   | Introduction to testing, Checklist preparation                                                                                        | Student will be able to understand role of testing in real world and he/she can prepare checklist for given problem.                            |
| 3 - 4   | Manual Testing concepts: Understanding of Static testing and Dynamic testing                                                          | Student will be familiarize with methods of testing which can be applied by inspecting, reviewing, or preparing walkthroughs.                   |
| 5 - 6   | Creating test case from use case scenarios and test scenarios.                                                                        | Students will going to learn difference between test case and test scenarios. They can also prepare checklists by using UML use case scenarios. |
| 7 - 8   | Hand-on exercise on concepts of levels of testing : Unit Testing with JUnit                                                           | Student will be familiarize with different concepts of Junit and perform unit testing with using the same.                                      |
| 9 - 10  | Testing WebApp using selenium web driver with JAVA/Python                                                                             | Student will be familiarize with different concepts of Web driver and perform web application testing with using the same.                      |
| 11 - 12 | Understanding of basics Mobile Application testing using Appium and Demonstration of defect tracking tool such as JIRA/ Cucumber etc. | Student will be able to understating basics of mobile application testing using Appium.                                                         |

**Total Hours (Practical): 36**

**Total Hours: 36**

## CA332: Mini Project

### (300 Marks)

**Contact Hours: 15**

**Objective:**

The main objective of this mini project is to let the students apply the programming knowledge to a real-world situation/problem and exposed the students with specific programming skills and help in developing a working model in terms of application.

**Course Outcomes:**

|     |                                                                                                                                                         |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Student will understand the implementation of concepts of SDLC and Software Engineering.                                                                |
| CO2 | The programming concepts they learn during their academics, it will be converted in to the actual implementations.                                      |
| CO3 | Students will be exposed to understand the requirement of proposed software and implement these requirements in terms of programming logic and methods. |
| CO4 | Students must understand the difference between a program and professional application/product/software.                                                |
| CO5 | Students will learn different categories of applications like Desktop application, Web applications, etc.                                               |

**Guidelines:**

Mini Project is in house project development. Every student is required to carry out Mini Project work under the supervision of a guide provided by the placement Coordinator. The guide shall monitor progress of the student continuously. A candidate is required to present the progress of the Mini Project work during the semester as per the schedule provided by the placement Coordinator.

Mini Project proposal should be prepared in consultation with project guide. It should clearly state the objectives and environment of proposed Mini Project to be undertaken. Project documentation must be with the respect to the project only. Project report should strictly follow the points suggested in format of project report. Placement coordinator will provide the format of project report. Student has to submit one copy of Mini Project to the institute. Each Student is required to make a copy of Mini Project in CD and submit along with Mini Project report.

### Evaluation:

The project must be evaluated in two aspects:

- a. Internal (100 Marks):
  - i. Reporting to internal project guide
  - ii. Incorporation of suggestions by project guide
  - iii. Internal Project viva examination
- b. External (200 Marks):
  - i. Project Report Preparation & Evaluation
  - ii. External Project Viva Examination

# Students can select any MOOC course of their choice related to current trends of Information Technology with at least 30 hours. 03 credits will be transferred in the result of students based on this course.

## CA334: Minor Project

### (600 Marks)

**Contact Hours: 24**

**Objective:**

The main objective of this Minor project is to let the students apply the programming knowledge to a real-world situation/problem and exposed the students with specific programming skills and help in developing a working model in terms of application.

**Course Outcomes:**

|     |                                                                                                                                                         |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Student will understand the implementation of concepts of SDLC and Software Engineering.                                                                |
| CO2 | The programming concepts they learn during their academics, it will be converted in to the actual implementations.                                      |
| CO3 | Students will be exposed to understand the requirement of proposed software and implement these requirements in terms of programming logic and methods. |
| CO4 | Students must understand the difference between a program and professional application/product/software.                                                |
| CO5 | Students will learn different categories of applications like Desktop application, Web applications, etc.                                               |

**Guidelines:**

Minor Project is in house project development. Every student is required to carry out Minor Project work under the supervision of a guide provided by the placement Coordinator. The guide shall monitor progress of the student continuously. A candidate is required to present the progress of the Minor Project work during the semester as per the schedule provided by the placement Coordinator.

Minor Project proposal should be prepared in consultation with project guide. It should clearly state the objectives and environment of proposed Minor Project to be undertaken. Project documentation must be with the respect to the project only. Project report should strictly follow the points suggested in format of project report. Placement coordinator will provide the format of project report. Student has to submit one copy of Minor Project to the institute. Each Student is required to make a copy of Minor Project in CD and submit along with Minor Project report.

### Evaluation:

The project must be evaluated in two aspects:

- a. Internal (200 Marks):
  - i. Reporting to internal project guide
  - ii. Incorporation of suggestions by project guide
  - iii. Internal Project viva examination
- b. External (400 Marks)
  - i. Project Report Preparation & Evaluation
  - ii. External Project Viva Examination

| Course Code | Course Title  | Teaching Scheme |        | Internal              | End Semester Examination |                     | Total |

# CA335: Dissertation

## (100 Marks)

**Contact Hours: 24 Hours**

**Objective:** To allow students to undertake a substantial in-depth study of a specific topic in Computer Science

**Guidelines:**

- Decide the topic of dissertation with consultation of your supervisor.
- It is mandatory to report to supervisor two times in month.
- Decide the content and flow of dissertation with the consultation of your supervisor
- Before submission of dissertation report, it is expected from student to publish/present at least one research paper in National/International conference/journal of repute.
- Submit two spiral binding copies of your dissertation duly signed by your supervisor and Head of the department.
- The dissertation evaluation criteria are as follows:
  - Research topic and familiarity with the theory
  - Literature Survey
  - Research Methodologies used
  - Discussion and Conclusions
  - Structure and Presentation

**Course Outcome (COs):** At the end of the course, the students will be able to

|     |                                                                                |
|-----|--------------------------------------------------------------------------------|
| CO1 | Able to identify and investigate a research problem in computer science        |
| CO2 | Able to apply an appropriate research design and associated methods rigorously |
| CO3 | Able to draw appropriate conclusions and indicate the significance of findings |
| CO4 | Able to report the research in scholarly fashion.                              |
