

ACADEMIC REGULATIONS & SYLLABUS 2022 -23

Faculty of Computer Science & Applications

Smt. Chandaben Mohanbhai Patel Institute of
Computer Applications

Bachelor of Computer Applications (B.C.A.) Programme

(Choice Based Credit System)

Charotar University of Science and Technology (CHARUSAT)
CHARUSAT Campus, At Post: Changa – 388421, Taluka: Petlad, District: Anand
Phone: 02697-247500, Fax: 02697-247100, Email: info@charusat.ac.in
www.charusat.ac.in

ACADEMIC RULES

To ensure uniform system of education, duration of post graduate programmes, eligibility criteria for and mode of admission, credit load requirement and its distribution between course and system of examination and other related aspects, following academic rules and regulations are recommended.

1. System of Education

The Semester system of education should be followed across the Charotar University of Science and Technology (CHARUSAT) at Master's levels. Each semester will be at least 90 working days duration. Every enrolled student will be required to take a specified load of course work in the chosen course of specialization and also complete a project/dissertation if any.

2. Duration of Programme

Undergraduate Programme	Bachelor of Computer Applications(BCA)
Minimum	6 Semesters (3 Academic years)
Maximum	10 Semesters (5 Academic years)

3. Eligibility & Mode of Admissions

Eligibility of a candidate and mode of admission to the programme will be according to the regulations for admission committee decided by Government of Gujarat from time to time.

4. Programme structure and Credits

A student admitted to a program should study the course and earn credits specified in the course structure.

5. Attendance

- 5.1 All activities prescribed under these regulations and listed by the course faculty members in their respective course outlines are compulsory for all students pursuing the courses. No exemption will be given to any student from attendance except on account of serious personal illness or accident or family calamity that may genuinely prevent a student from attending a particular session or a few sessions. However, such unexpected absence from classes and other activities will be required to be condoned by the Dean/Principal.

5.2 Student attendance in a course should be 80%.

6. Course Evaluation

6.1 The performance of every student in each course will be evaluated as follows:

- 6.1.1 Internal evaluation by the course faculty member(s) based on continuous assessment, for 30% of the marks for the course; and
- 6.1.2 Final examination by the University through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these, for 70% of the marks for the course.

6.2 University Examination

- 6.2.1 The final examination by the University for 70% of the evaluation for the course will be through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these.
- 6.2.2 In order to earn the credit in a course a student has to obtain grade other than FF.
- 6.2.3 Performance at Internal & University Examination will be done on the relative grading system.

7. Grading

The student's performance in any semester will be assessed by the Semester Grade Point Average (SGPA). Similarly, his performance at the end of two or more consecutive semesters will be denoted by the Cumulative Grade Point Average (CGPA). The SGPA and CGPA are defined as follows:

Grading Scheme

Range of Marks (%)	≥80	≥75 <80	≥70 <75	≥65 <70	≥60 <65	≥55 <60	≥50 <55	<50
Letter Grade	AA	AB	BB	BC	CC	CD	DD	FF
Grade Point	10	9	8	7	6	5	4	0

$$SGPA = \frac{\sum C_i G_i}{\sum C_i}$$

where C_i is the number of credits of course i
 G_i is the Grade Point for the course
 i and $i = 1$ to n , n = number of courses in the semester

$$CGPA = \frac{\sum C_i G_i}{\sum C_i}$$

where C_i is the number of credits of course i

G_i is the Grade Point for the course

i and $i = 1$ to n , n = number of courses of all semesters up to which CGPA is computed.

8. Detention Rule

A student will be promoted to next year only if he/she has cleared all the courses of the year he/she is studying in

9. Awards of Degree

9.1 Every student of the programme who fulfils the following criteria will be eligible for the award of the degree:

9.1.1 He should have earned at least minimum required credits as prescribed in course structure; and

9.1.2 He should have cleared all evaluation components in every course; and

9.2 The student who fails to satisfy minimum requirement of CGPA will be allowed to improve the grades so as to secure a minimum CGPA for the award of degree. Only latest grade will be considered.

10. Award of Class

The class awarded to a student in the programme is decided by the final CGPA as per the following scheme:

Distinction:	CGPA ≥ 7.5 & ≤ 10
First class:	CGPA ≥ 6.0 & < 7.5
Second Class:	CGPA ≥ 5.0 & < 6.0
Pass Class:	CGPA < 5.0

11. Transcript

The transcript issued to the student at the time of leaving the University will contain a consolidated record of all the courses taken, credits earned, grades obtained, SGPA, CGPA, class obtained, etc.

CHOICE BASED CREDIT SYSTEM

The choice based credit system provides flexibility in designing curriculum and assigning credits based on the course content and hour of teaching. The choice based credit system provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective and open elective courses. The CBCS provides a cafeteria type approach in which the students can take courses of their choice and adopt an interdisciplinary approach to learning. The courses shall be evaluated on the grading system, which is considered to be better than the conventional marks system.

CBCS – Conceptual Definitions / Key Terms (Terminologies)

Types of Courses: The Programme Structure consist of 3 types of courses:

Foundation Courses, Core Courses and Elective Courses.

Foundation Course

These courses are offered by the institute in order to prepare students for studying courses to be offered at higher levels.

Core Courses

A Course which shall compulsorily be studied by a candidate to complete the requirements of a degree / diploma in a said programme of study is defined as a core course. Following core courses are incorporated in CBCS structure:

A. University Core Courses(UC):

University core courses are compulsory courses which are offered across university and must be completed in order to meet the requirements of programme.

B. Programme Core Courses(PC):

Programme core courses are compulsory courses offered by respective programme owners, which must be completed in order to meet the requirements of programme.

Elective Courses

Generally, a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline of study or which provides an extended scope or which enables an exposure to some other discipline / domain or nurtures the candidates

proficiency / skill is called an elective course. Following elective courses are incorporated in CBCS structure:

A. University Elective Courses(UE):

The pool of elective courses offered across all faculties / programmes.

B. Institute Elective Course (IE)

Institute elective courses are those courses which any students of the University/Institute of a Particular Level (PG/UG) will choose as offered or decided by the University/Institute from time-to-time irrespective of their Programme /Specialization.

C. Programme Elective Courses(PE):

The programme specific pool of elective courses offered by respective programme.

Vision, Mission, PEOs, POs and PSOs

Vision

To become a leading institution in the field of computer applications and contribute in national efforts of computerizing public systems

Mission

To produce competent computer professionals with the ability to face future challenges.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The graduates will:

PEO1: Be able to understand the requirement of computing problem and implement an effective solution.

PEO2: Be able to successfully take up various available career options.

PEO3: Be able to continuously learn in their preferred domains.

PEO4: Be able to acquit themselves in ethical and professional manner while demonstrating effective skills.

PROGRAM OUTCOMES (POs)

The Graduate of Computer Science and Applications will be able to:

PO1: Computational Knowledge: Apply knowledge of computing fundamentals, computing specialization, mathematics, and domain knowledge to provide effective solution in the area of computing.

PO2: Problem Analysis: Identify, formulate, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.

PO3: Design /Development of Solutions: Design and evaluate solutions for computing problems, and design and evaluate systems, components, or processes that meet specified needs by considering several societal aspects.

PO4: Modern Tool Usage: Create, select, adapt and apply appropriate techniques, resources, and modern computing tools for any computing activities, with an understanding of the limitations.

PO5: Professional Ethics: Understand and commit to professional ethics, responsibilities, and norms of professional computing practice.

PO6: Life-long Learning: Recognise the need, and have the ability, to engage in independent learning for continual development as a computing professional.

PO7: Project management: Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO8: Communication Efficacy: Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions.

PO9: Societal and Environmental Concern: Understand and assess societal and environmental issues within local and global contexts, and the consequential responsibilities relevant to professional computing practice.

P10: Individual and Team Work: Function effectively as an individual and as a member or a leader in diverse teams and in multidisciplinary environments.

P11: Innovation and Entrepreneurship: Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

PROGRAM SPECIFIC OUTCOMES

At the end of the programme, the student should be able to

PSO1: Analyze, evaluate and formulate workable computing solutions to real world problems using computing methods.

PSO2: Apply proficiencies of communication, teamwork and management skills with spirit of entrepreneurship.

SALIENT FEATURES

- Four Years unique programme as per National Education Policy-2020.
- Exit option is available after every year (i.e 1st, 2nd and 3rd)
- Award of Degree:
 - **Certificate of Computing** (Candidate wish to Exit after the First Year)
 - **Diploma in Computer Applications** (Candidate wish to Exit after the Second Year)
 - **Bachelor of Computer Applications** (Candidate wish to Exit after the Third Year)
 - **Bachelor of Computer Applications(Honor's)** (Candidate finishes all Four Years)
- Programme is designed based on Choice Based Credit System(CBCS).
- Right blend of fundamentals and latest technologies related courses.
- Exposure of humanities courses in every semester for holistic development of students.
- Interdisciplinary exposure in form of university elective courses.
- Unique methodologies in form of case study and project based learning for teaching-learning.
- Inclusion of environmental awareness through environment science courses.
- Coverage of emerging technologies through expert sessions, seminar and workshop.
- Total Credits of Programme (8 Semesters): 200

Total Credits of Programme(8 Semesters)

200

TEACHING AND EXAMINATIONSCHEME FOR

BCA PROGRAMME

**EFFECTIVE FROM
ACADEMIC YEAR 2022-23**

Teaching & Examination Scheme
Bachelor of Computer Applications (B.C.A.) Programme
 (Choice Based Credit System)
Effective from Year 2022 - 23
Semester - I

Course Code	Course Title	Teaching Scheme				Examination Scheme						
		Contact Hours			Credit	Theory			Practical			Total
		Theory	Practical	Total		Internal		Exter nal	Internal		Exter nal

Course Code	Course Title
CA121	Information Technology Trends
CA122	Business Organization and Principles of Management

CAI21: Information Technology Trends (100 Marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: During theory lectures emerging trends of information technology will be introduced to students. Emphasis will be given on acquisition, storage and processing of data to generate meaningful information. Students will be made familiar with applications related to information technology. Emerging trends and societal impacts of information technology will be discussed to students.

Outline of the Course:

Unit No.	Title of the Unit	Minimum Number of Theory Hours
1	Information Technology Essentials	06
2	Internet Applications	05
3	Internet Service Trends	07
4	Data Analytics Trends	06
5	GPS and GIS Trends	05
6	Emerging Trends and Societal Impact of IT	07

Total Hours (Theory): 36

Total Hours:36

Detail Syllabus:

Unit I: Information Technology Essentials **Hours 06**

Introduction to Information Technology, Acquisition of various types of data- Introduction to Number and Textual Data, Image Data, Audio and Video Data Numbers and Textual Data, Data Storage and organization.

Unit II: Internet Applications **Hours 05**

Internet: Introduction, Internet basics, Internet protocols, Internet addressing, Browser WWW, E-mail, telnet, FTP, application, benefits and limitation of internet, electronic conferencing, and teleconferencing.

Unit III: Internet Service Trends **Hours 07**

Fundamentals of Cloud Computing, Types of Cloud based Services, Varieties of Cloud Computing, Types of Cloud Computing, Advantages and Disadvantage Cloud Computing, Cloud Computing Providers E-commerce, M-Commerce.

Unit IV: Data Analytics Trends

Hours 06

Types of Data – Qualitative and Quantitative, Data Analytics basics, Types of Analytics, Common technologies used in data analytics, Tools for Data Analytics

Unit V: GPS and GIS Trends

Hours 05

What is GPS, Key uses of GPS, how it is applied, what is GIS, Key Uses of GIS, which industries use GIS, Future of GPS and GIS.

Unit VI: Emerging Trends and Societal Impact of IT

Hours 07

Internet of Things, Virtual and Augmented Reality, Industry 4.0, Image Processing Introduction to Societal Impact, Social Use of World Wide Web, Privacy, Security and Integration of Information, Disaster Recovery, Intellectual Property Right, Career in IT

Core Books:

1. V Rajaraman : Introduction to Information Technology, 3rd Edition, PHI Learning Private Limited, 2018.
2. P.T. Joseph, S.J.: E-Commerce An Indian Perspective, th Edition, PHI Learning Private Limited, 2019.
3. Thomas Erl, Z. Mahmood and R. Puttini: Cloud Computing Concepts, Technology & Architecture, Pearson Publication, 2014

Reference Books:

1. Syed Muhammad Fahad Akhtar, Big Data Architect's Handbook, Packt Publishing ltd, 2018.
2. R. Kalakota & M. Robinson, e-Business 2.0, 2nd Edition, Pearson Publisher, 2012

Web References:

1. <https://blog.k2datascience.com/the-basics-of-data-analytics-77e5cc7ea741> [For Data Analytics]
2. <https://www.investopedia.com/terms/c/cloud-computing.asp> [For Cloud Computing]
3. <https://files.eric.ed.gov/fulltext/ED536788.pdf> [For Data Analytics]
4. <https://nobelsystemsblog.com/facts-between-gis-gps/> [For GPS,GIS]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Understand the essentials of Information Technology.
CO2 :	Aware about Internet based applications and their uses in real life.
CO3 :	Understand the trends of Internet Services.
CO4 :	Understand basics of data analytics, GPS and GIS related technologies.
CO5 :	Understand the Emerging trends and Societal Impact of Information Technology.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Information Technology Essentials	✓				
2	Internet Applications		✓	✓		
3	Internet Service Trends			✓		
4	Data Analytics Trends				✓	
5	GPS and GIS Trends				✓	✓
6	Others Emerging Trends and Societal Impact of IT					✓

Course Articulation Matrix:

CO5	3	1	2	1	2	2	-	-	2	-	-	2	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA122: Business Organization and Principles of Management

(100 Marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: This syllabus is designed to impart the basic knowledge of major components of Management, namely Planning, Organizing Business in modern era, Staffing, Leading, Controlling using different techniques.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours
1	Forms of Business Ownership	6
2	Business Services	7
3	Emerging Modes of Business	4
4	Principles of Management	8
5	Business Ethics and Its Social Responsibilities	4
6	Entrepreneurship Development	7

Total Hours (Theory): 36

Total Hours: 36

Detailed Syllabus:

Unit -I: Forms of Business Ownership

Hours: 06

Sole proprietorship, Joint Hindu Family Business – meaning, features, merits and demerits, Partnership – meaning, types, registration, types of Partners, Co – Operative societies – types, merits and limitations, Company – Private Ltd, Public Ltd –merits, limitations, Starting a business – Basic factors, Choice of forms of business organizations.

Unit -II: Business Services

Hours: 07

Nature and types of Business services – Banking, Insurance, Transportation, Warehousing, communication. Meaning, role, Functions of Banking, Insurance, Postal and Telecom services, Warehousing, Transport, Hospitality and Tourism Services.

Unit -III: Emerging Modes of Business

Hours: 04

E – business – Meaning, Scope and benefits, Resource required for successful E –Business implementation, On – line transactions, payment mechanism, Security and safety of business transactions, Outsourcing – Concept, need and scope.

Unit -IV: Principles of Management

Hours: 08

Definition and nature of management, purpose of management, managerial functions at different levels, management- art or science, planning, planning process & purpose, steps of planning, goal setting, decision making, organizing function, organizing process, formal and informal organizations, centralization and decentralization organization, staffing function, staffing process, recruitment, selection, training, performance appraisal, directing function, concepts of leading, motivating, communicating, qualities of leaders, controlling, control process, control techniques.

Unit -V: Business Ethics and Its Social Responsibilities

Hours: 04

Concept of social responsibility, cases for social responsibility, responsibility towards different interest groups, owners, investors, employees, consumers, government, community, public in general, business ethics – concept and elements, business and environmental protection.

Unit -VI: Entrepreneurship Development

Hours: 07

The concept and introduction, personality and mindset of an entrepreneur, difference between an entrepreneur, intrapreneur and manager/executive, entrepreneurial eco-system, types and functions of an entrepreneur- entrepreneurial motivation, entrepreneurship development programs, business idea generation, business plan and detailed project report, funding and support aspects.

Core Books:

1. Harold Koontz & Heinz Weihrich: Essentials of Management, Ninth Edition, Tata McGraw Hill Publishing, 2012.
2. Dr. F. C. Sharma, Dr. D. Chandra, Anju Agarwal: Business Organization, SBPD Publications, 2020.

Reference Books:

1. Tripathy & Reddy: Principles of Management, fifth edition, Tata McGraw Hill Publishing, 2015.
2. Robbins , Decenzo & Coulter: Fundamentals of Management, eighth edition, Pearson Education, 2013.
3. Y.K. Bhushan: Fundamentals of Business Organisation, Sultan Chand Publicatio, 2018.

Web References:

1. <https://www.dynamicutorialsandservices.org/2018/10/entrepreneurship-development-notes.html> [Entrepreneurship Development]
2. <https://leverageedu.com/blog/emerging-modes-of-business/> [Emerging Modes of Business]
3. https://www.managementstudyguide.com/management_functions.htm [Functions of Management]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Students will be able to understand different types of business proprietorship.
CO2 :	Students will get the knowledge of functionality of various online business services.
CO3 :	Students will learn the important concepts of management.
CO4 :	To be able to understand the ethics and social responsibilities of business towards various entities.
CO5 :	Students will learn the concepts required to be a good entrepreneur.

Course Outcomes Mapping:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CAI23: Foundation of Programming (200 Marks)

Contact Hours: 07

Pre-requisite: None

Methodology & Pedagogy: During theory lectures the emphasis will be given on theoretical concepts of flow charts and algorithms. Structure of C programming language and different elements of C programming will be explained in lectures. During practical sessions the concepts learned in theory lectures will be implemented.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1	Programming Basics	8	36
2	Introduction to C	12	
3	Expressions and Control Statements	9	
4	Arrays and Strings	7	
5	Introduction to Functions	5	
6	Pointers	7	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total Hours: 84

Detail Syllabus:

Unit I: Programming Basics

Hours 08

Introduction to algorithm, Key features of algorithm, Introduction to flow charts, Significance of flow chart, Advantages and limitation of flow chart, Introduction to programming languages, Introduction to editor, compiler, and translator

Unit II: Introduction to C

Hours 12

Introduction, characteristics of C, Structure of C Program, writing first C program, Files used in C program, Compiling and Executing C program; Basic data types in C, User define data types, Variables in C, Declaring and initializing variables in C, Constants, Input / Output statements in C; Operators - arithmetic, relational, logical, assignment, increment - decrement, conditional, Bitwise and special, comma operator, size-of operator, operator precedence chart.

Unit III: Expressions and Control Statements

Hours 09

Arithmetic expressions, evaluation of expressions, type conversions in expressions, operator precedence and associativity, mathematical functions. Type conversion and casting; Introduction to decision control statements, Conditional and branching statements, loop, nested loop, Break, continue and go to statement.

Unit IV: Array and Strings

Hours 07

Arrays: One-dimensional, two-dimensional, Handling of Character Strings: Declaring and initializing string variables, reading string from terminal, writing string to screen, string handling functions, table of strings.

Unit V: Introduction to Functions

Hours 05

Need for user-defined functions, the form of c function, return values and their types, calling a function, category of functions, handling of non-integer functions, nesting of Functions, recursion, functions with arrays, storage class.

Unit VI: Pointers

Hours 07

Understanding the Computer's Memory, Introduction to Pointers, Declaring Pointer Variables, Pointer Expressions and Pointer Arithmetic, Null Pointers, Generic Pointers, passing arguments to Function using Pointers, Pointers and Arrays, Passing an Array to a Function, Difference between Array name and Pointer, Pointers and Strings, Array of Pointers.

Core Books:

1. Reema Thareja: Computer Fundamentals and Programming in C, 2nd Edition, Oxford University press, 2012
2. E. Balagurusamy: Programming In C, 6th Edition, 2012
3. Pradip Dey and Manas Ghosh. "Programming in C", Second Edition, Oxford University Press.

Reference Books:

1. Herbert Schildt: The complete reference C, Fourth edition, Tata McGraw Hill, 2000
2. Yashwant Kanetkar: Let us C, 13th Edition, BPB publication, 2013.
3. Pradip Dey, Manas Ghosh: Programming in C, 4th Edition, Oxford University press, 2012.
4. Brian W. Kerighan and Dennis M. Ritchie : The C Programming Language, Prentice Hall.

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Be able to solve problems using algorithms and flowcharts.
CO2 :	Learn about the structure of C program and able to develop simple programs using the C Programming language with data types, variables and constants.
CO3 :	Gain the knowledge of different conditional and iterative statements and expressions.
CO4 :	Arrays of numbers and characters as well as manipulating with them.
CO5 :	Be able to understand user define function. Also Understand the concept of Dynamic memory management. Learn Programing-using Array with Pointer and Structure.

CAI24: Digital Computer Fundamentals (100 Marks)

Contact Hours: 04

Pre-requisite: None

Methodology & Pedagogy: In order to achieve the course objectives, students will be introduced to digital technologies. Various digital modules used to create digital computer devices like gates, flip flops, decoder, encoder etc. are to be studied. Mathematical base is created to understand the organization of digital computer.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours
1	Digital Systems and Binary Numbers	10
2	Boolean Algebra and Logic Gates	10
3	Combinational Circuit Designing	8
4	Sequential Circuit Designing	8
5	Memory Interfaces and Data Representation	6
6	The Arithmetic Logic Unit and Control Unit	6

Total Hours (Theory): 48

Total Hours (Lab)

Total Hours: 48

Detailed Syllabus:

Unit - I: Digital Systems and Binary Numbers:

Hours 10

Introduction and Evolution of Digital computers, Major components of digital computer, Interfaces and Buses, compiler, interpreter, Assembler, Introduction to various number systems (Decimal, Binary, Octal, Hexadecimal, BCD), Conversion of number system, Binary operations, signed binary numbers, 1's complement and 2's complement.

Unit - II: Boolean Algebra and Logic Gates:

Hours 10

Fundamental concepts and rules of Boolean algebra, Boolean Algebra Laws, Boolean expressions and its simplification with and without Truth Tables, Canonical form and standard form, De-Morgan's Theorem, Basic duality laws, Derivation of Boolean expressions, Introduction to logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR), Implementation of Boolean expressions using logic gates, Sum of product and Product of Sum forms, Universal gates, Implementation of other gates using universal gates, Karnaugh Map method for two, three, four and five variables, K-map with don't care conditions, Tabulation method, determination and selection of prime applicants.

Unit - III: Combinational Circuit Designing:

Hours 08

Introduction to combinational circuits, Design procedures, Adders, Subtractors, code conversion circuits, Analysis procedures, Multilevel NAND circuits, Multilevel NOR circuits, EX-OR functions, Binary adder and Subtractors, Decimal adder and Subtractors, Magnitude comparator, Decoder and encoders, Multiplexer and de-multiplexer.

Unit - IV: Sequential Circuit Designing:

Hours 08

Introduction to Sequential circuits, Concepts of Flip-flops, triggering flip-flops, Clock signals, Analysis of clock sequential circuits, State Reduction and assignments, Flip flop excitation table, Design procedure of asynchronous and synchronous counters (Ripple counter, Binary counter, BCD counter), Design of registers, Shift registers, Timing sequences.

Unit - V: Memory Interfaces and Data Representation:

Hours 06

Memory, Types of ROM, Design of ROM, Types of RAM, Magnetic disc memory, Magnetic tape, Digital recording techniques, Linear-select memory organization, Types of digital codes (Gray code, 8421 code, Alphanumeric codes), Parity checking codes, Floating point representation, Fixed point representation.

Unit - VI: The Arithmetic Logic Unit and Control Unit:

Hours 06

Basic operations of Arithmetic Logic Unit, Construction of the Arithmetic Logic Unit, Representation of Instruction word, Control registers, Instruction and execution cycles of Control registers, Sequence operation of Control Registers.

Core Books:

1. M. Morris Mano: Digital Logic and Computer Design, Third Edition, Pearson Education, 2016.
2. Thomas C. Bartee: Digital Computer Fundamentals, Sixth Edition, Tata McGraw Hill Publishing, 2012.
3. M. Morris Mano: Computer System Architecture, Third Edition, Pearson Education, 2011.

Reference Books:

1. Andrew S. Tanenbaum: Structured Computer Organization, Fourth Edition, Pearson Education, 2005.
2. Abert Paul Malvino and Jerald A. Brown: Digital Computer Electronics, Third Edition, Tata McGraw Hill Publishing, 2008.

Web References:

4. <https://cupola.gettysburg.edu/oer/1/> [Digital Circuit Projects]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	To get the idea about digital system and numbering system.
CO2 :	To study logic gates for digital circuit designing.
CO3 :	Learn to design various combinational circuits
CO4 :	Learn to design various sequential circuits
CO5 :	To learn memory design concepts and to study computer Arithmetic Logic Unit and Control Unit

Course Outcomes Mapping:

CAI25: Fundamentals of Web Designing (100 Marks)

Contact Hours: 03

Pre-requisite: Basic concepts of web

Methodology & Pedagogy: This course focuses on providing hands-on experience to students for design and develop entire web sites using several web designing tools and HTML scripting language.

Outline of the course:

Week No	Practical	Description
1- 2	Basic Construction of an HTML & HTML5 Page, HTML Text Editors, HTML Building blocks. Adding Content : Basic HTML tags – Text formatting tags, heading tags, paragraph tags, division tag, Span tags, Break line tag, Binding space in HTML	Student can learn basic concepts of web page design. Students get familiar with different tags and attributes which is used to add the text in a web page
3 - 4	Controlling Font size and color, Adding Table – Table tag, grouping and merging table rows and columns. Adding List – ordered, unordered and definition list	Student can able to change the font styles and color in more attractive way. Also, they can able to display the information in tabular & List format
5 - 6	Adding Image, Adding links - Changing link colors, Email link, Embedding audio and video, Adding Field sets.	Student can add multimedia like image, audio, video in a web page. Student can explore various internal and external linking methods.
7 - 8	Adding Form: Form tag, Action, Method. Basic form controls – Textbox, Password field, Radio Button, Checkbox, Multiple line text area, file upload, Various types of buttons – submit, reset, image, simple button,	Student can design the various form elements for interaction with the web page users.
9 - 10	HTML5 input elements - Color, Number, Date, Month, week, Time, datetime-local, Email, url, range, search, <datalist>, <output>, <progress>, <meter>	Student can apply HTML5 input element to make form more attractive
11 - 12	Regular expression, HTML5 new attributes – Placeholder, Required, Pattern, Autocomplete, Autofocus, novalidate, formnovalidate, formaction, formmethod, spellcheck, contenteditable.	Student can explore the basic HTML5 new attributes and also apply validation on form submission

Total Hours (Practical): 36

Total Hours: 36

Core Books:

1. Powel Thomas: HTML - The Complete Reference, 3rd Edition, McGraw-Hill Education – Europe, 2018.
2. DT Editorial Services: HTML 5 Black Book, 2nd Edition, Dreamtech Press, 2016
3. Matt West: HTML 5 Foundations, Wiley publication, 2013
4. Farrar: HTML Example book, BPB, 2007.

Reference Books:

2. html.net/tutorials/html/ [For HTML tutorials]
3. www.htmlgoodies.com/ [For HTML resources]
4. <https://developer.mozilla.org/en-US/learn/html> [For HTML best practices]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Able to understand basic construction of HTML & HTML5 document and started using basic tags.
CO2 :	Able to Add content using various tags and format the content in table & list.
CO3 :	Able to design links and multimedia elements such as image, audio, video.
CO4 :	Able to design a web page form using HTML & HTML5.
CO5 :	Able to apply validation using HTML5 attributes.

Course Outcomes Mapping:

HS 101.02 C: Communicative English

(100 Marks)

Contact Hours: 30 Hours

Pre-requisite courses: Grammar and Punctuation (Free Online Course for Beginners)

<https://www.coursera.org/learn/grammar-punctuation>

Outline of the Course:

Unit No.	Title of the unit	Minimum number of hours
1.	Introduction to Communicative English	03
2.	Communication Functions	06
3.	Basic Communication Skills I – Listening	03
4.	Basic Communication Skills II – Reading	03
5.	Basic Communication Skills III – Speaking	06
6.	Basic Communication Skills IV – Writing	06
7.	Developing Vocabulary	03

Total Hours (Practical): 30

Total Hours: 30

Detailed Syllabus:

Unit I :	Introduction to Communicative English	03 Hours
	English as a Window Language; Varieties of English: British English, American English, Indian English; Language Variations; Importance of English for Academic and Professional Development; Strategies for Language Acquisition; Formal VS Informal English	
Unit II :	Communication Functions	06 Hours
	Greeting and Introducing; Making Requests and Asking for Information; Expressing Likes and Dislikes; Seeking Permission; Giving and Taking Advice; Describing People, Place, Things; Retelling Past Events; Comparing and Contrasting; Persuading; Describing Cause and Effect	
Unit III :	Basic Communication Skills I – Listening	03 Hours
	Importance of Listening as a Language Skill; Basic Listening Skills; Types of Listening; Barriers to Listening; Strategies for Effective Listening; Listening Practice	
Unit IV :	Basic Communication Skills II – Reading	03 Hours

Importance of Reading as a Language Skill, Reading Strategies: Skimming, Scanning, Intensive Reading, Extensive Reading, Strategies for Effective Reading Comprehension, Reading Practice

Unit V : Basic Communication Skills III – Speaking 06 Hours

Importance of Speaking as a Language Skill, Basic Speaking Skills; Paralanguage for Effective Speaking; Strategies for Oral Communication; Extempore and Public Speaking

Unit VI : Basic Communication Skills IV – Writing 06 Hours

Importance of Writing as a Language Skill; Process of writing: Prewriting, Drafting, Revision, Editing, Publication; Seven C's of Writing; Sentence Construction – Complex, Compound, Paragraph Development; Letter Writing (Academic Context)

Unit VII : Developing Vocabulary 03 Hours

High Frequency Vocabulary (Every day and Academic use); Words Often Confused and Misused; Useful Phrasal Verbs, Idioms and Proverbs, Homonyms and Homographs; Lexical Range, Word Games

Text book:

1. Sanjay Kumar and PushpLata (Second Edition, 2015), Communication Skills, Oxford University Press, New Delhi
2. M V Rodriques (2013), Effective Business Communication, Concept Publishing Company (P) Ltd., New Delhi
3. Krishna Mohan and Meera Banerji (2010), Developing Communication Skills, Macmillan Publications India Ltd., New Delhi

Reference book:

1. Mohan and Meenakshi Raman (2006), Effective English Communication, Mcgraw-Hill Publishing Company Limited, New Delhi

2. <https://www.coursera.org/learn/importance-of-listening?#syllabus>
3. <https://www.futurelearn.com/courses/english-academic-study>

Course Outcome (COs): At the end of the course, the students will be able to

CO1	Communicate with people using English language functions including greetings, introductions, making and responding to requests, suggestions, invitations and apologies, conducting simple transactions in shops and offices, asking for and giving directions, etc
CO2	Go through a text and identify specific and global information.
CO3	Become more knowledgeable about speaking strategies and speak effectively using appropriate words, expression, tone and pronunciation.
CO4	Be aware about various reading strategies and read and comprehend academic and non-academic prose (text).
CO5	Write systematically using nuances of writing
CO6	Express their opinion and likes and dislikes, advice and convince others in a more polite and accepted way.

CA127	Business Economics

CA126: Fundamentals of Electronic Commerce (100 marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: During theory lectures, the fundamental concepts regarding Ecommerce, E-Payment, E-Security, E-branding and E-Data Interchange, CRM, ERP will be discussed. Students will be required to carry out case studies using the concepts and techniques they have learnt during theory sessions.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Theory Hours
1	Introduction to E-commerce	07
2	E- Marketing	06
3	E-Security and E-Payment	07
4	Mobile Commerce	05
5	CRM and ERP	07
6	E-Commerce Applications	04

Total Hours (Theory):36

Total Hours:36

Detail Syllabus:

Unit I: Introduction to E-commerce

Hours: 07

Emergence and use of Internet, origin of web and world wide web, advantages and disadvantages of E-commerce, Features of E-Commerce, Electronic Commerce over the Internet, Types of E-commerce.

Unit II: E- Marketing:

Hours:06

Traditional Marketing, Online Marketing, E- advertising, Internet Marketing Trends and strategies, E-branding.

Unit III: E-Security and E-Payment:

Hours:07

Security on the Internet, E-Business risk management issues, Digital token based E-Payment System, Properties of Electronic Cash, Digital Signature.

Unit IV: Mobile Commerce:

Hours:05

Definition of M-Commerce, Features of M-Commerce, Advantages and Disadvantages of M-Commerce, Areas of M-Commerce Applications, Payment Systems and Models in M-Commerce.

Unit V: CRM and ERP

Hours: 07

Customer Relationship Management, CRM capabilities and Customer life cycle, Introduction to ERP, Reasons for the growth of the ERP Market, Advantages and Disadvantages of ERP.

Unit VI: E-Commerce Applications

Hours: 04

Retail and Wholesale, Finance, Manufacturing, Online Booking, Online Publishing, Digital Advertising, Digital Shopping, Digital Media, Auctions, A case study need to be discussed for these application.

Core Books:

1. P.T. Joseph, S.J.: E-Commerce- An Indian Perspective, 3rd Edition, PHI learning Private Limited.
2. Kamlesh K. Bajaj, Debjani Nag: E-Commerce, The Cutting Edge of Business, 2nd Edition, McGraw-Hill Education.

Reference Books:

1. Anita Rosen: The e-commerce Question and Answer Book: A Survival Guide for Business Managers, 2nd Edition, Amacom.
2. Janice Reynolds: The Complete E-Commerce Book: Design, Build & Maintain a Successful Web-based Business, 2nd Edition, CRC Press.
3. By Philippe Humeau & Matthieu Jung : The White Book of Ecommerce Solutions, NBS System.
4. Ishita Lahiri and Sujit Kumar Ghose : Principals of Marketing and E-Commerce

Web References:

1. <http://www.ecommercetutorial.net/> [For Tutorial]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	To understand basic of Electronic Commerce and its Application
CO2 :	Getting knowledge of E-marketing and its Strategies.
CO3 :	Learn E-security and E-Payment in Detail and its term. Also, learn Encryption and decryption in basic.
CO4 :	To gain understanding of Mobile Commerce and its Application through real life examples.
CO5 :	To learn concepts of Customer Relationship Management and various solutions of E-Commerce (Software and Framework).

CA127-Business Economics

(100 Marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: During theoretical lessons, real-world examples will be used to discuss economic topics such as demand, supply, production, cost function, market structure, factor pricing, and microeconomics. Students will be offered appropriate case studies in order to provide actual exposure to theoretical economic ideas.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours
1	Fundamentals of Economics	05
2	Basic Elements of Demand and Supply	06
3	Theory of Production and Cost	07
4	Analysis of Revenue	07
5	Market Failures and Price Regulation	05
6	Macro-Economic Environment and National Income Accounting	06

Total Hours (Theory): 36

Total Hours: 36

Detail Syllabus:

Unit - I: Fundamentals of Economics

Hours: 05

Fundamentals of Economics, Needs, wants, nature of economics, scope of economics, business economics, laws of economics, business cycle, difference between Micro and Macro Economics.

Unit - II: Basic Elements of Demand and Supply

Hours: 06

Demand and supply, types of demand, determinants of demand and supply, law of demand and supply, balance between demand and supply, demand and supply schedule, demand function.

Unit - III: Theory of Production and Cost

Hours: 07

Theory of Production- Factors of Production, Basic Concepts, Production Function, Producer's Equilibrium- Least-Cost Factor Combination and Output Maximization for a given Level of Outlay.

Theory of Costs- Basic Concepts, Short-run Total Cost, Short-run Average and Marginal Cost, Relationship between Average and Marginal Cost, Average and Marginal Cost in the Long-run.

Unit- IV: Analysis of Revenue

Hours: 07

Basic Concepts of Revenue, Revenue, Relationship between Average and Marginal Revenue, Concept of Market and Main Forms of Market; Equilibrium of the Firm- Meaning, Objectives of the Firm, Monopoly and its features, Monopolistic Competition and Oligopoly.

Unit - V: Market Failures and Price Regulation

Hours: 05

Market failures and need for regulation, Regulations and market structure, Firm behavior, Price regulation.

Unit - VI: Macro-Economic Environment and National Income Accounting

Hours: 06

Basic macro- economic concepts –aggregate, demand aggregate supply, money, income employment consumption savings and investment. National Income Accounting-concepts and methods of national income, different methods of national income accounting.

Core Books:

1. P.L Mehta: Managerial Economics, Sultan Chand and Sons Publication, 2014
2. Keat Paul , K Young Philip , Erfle Steve, Banerjee Sreejata: Managerial Economics, seventh edition, Pearson Education, 2017.
3. N. Gregory Mankiw: Principles of Economics, sixth edition, South-Western, Cengage Learning, 2012.

Reference Books:

1. Geetika, Ghosh & Choudhury: Managerial Economics, third edition, Mc Graw Hill Education, 2005.
2. Mote V.L., Samuel Paul and G.S. Gupta: Managerial Economics Concepts and Cases, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2001.
3. G. S. Gupta: Macro Economics Theory and Applications, Second Edition, Tata McGraw Hill, 2006.

3. <https://corporatefinanceinstitute.com/resources/knowledge/economics/national-income-accounting/> [National Income Accounting]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Able to Interpret the various basic economic principles.
CO2 :	Able to understand theory of demand and supply.
CO3 :	Able to deal with balancing between cost and revenue
CO4:	Able to learn the causes and solution of market failures.
CO5:	Able to understand the basics of macroeconomics and accounting.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5

CA128: Advance Web Designing

(100 Marks)

Contact Hours: 03

Pre-requisite: CA123 – Fundamentals of Web Designing

Methodology & Pedagogy: This subject focuses on hands-on experiments to create dynamic and interactive web sites using HTML5, CSS3 and JavaScript.

Outline of the course:

Week No	Practical	Description
1- 2	CSS Styling the web - Applying CSS Building blocks – CSS Selectors, Cascade & inheritance, CSS Properties, CSS Box model.	Student can apply various types of CSS with its basic properties.
3 - 4	Creating Layout - Header, footer, navigation menu, and sub-navigation. Floats, Flexbox, Grids, Positioning, Multiple column layout.	Student can create different layout using semantic elements of HTML5 & CSS classification properties.
5 - 6	Creating Image Gallery and Animation - 2D/3D Transformation, Transitions and Animation, CSS Media query	Student can create layout image gallery & animation.
7 - 8	JavaScript – Adding Internal & External JavaScript, Working with variables, datatype – Number, String, Boolean, Array, Object, Operators, Conditional statements, Looping statements.	Student can write script for basic programs using condition, Loop, array and object.
9 - 10	Adding Dialog boxes in HTML page – Alert, Confirm and Prompt. Creating user defined function, Adding Mouse and Keyboard Event in HTML page, Manipulating String and Date.	Student can able to use in-build and user defined functions of JavaScript and make user interaction using various Events
11 - 12	JavaScript Document Object Model hierarchy – Create find and manipulate HTML Element using Objects and methods. Form validation, Applying Style using JavaScript. Creating New window, Accessing & manipulating History of HTML Pages.	Student can explore the DOM Hierarchy and apply various objects to make web page dynamic with user interactions.

Total Hours (Practical): 36

Total Hours:36

Core Books:

1. Julie C. Meloni, Jennifer Kyrnin: HTML, CSS, and JavaScript All in One, 3rd Edition, Pearson, 2018.
2. Joseph R. Lewis, Meitar Moscovitz : AdvancED CSS, W3C CSS Working Group, Apress, 2020.
3. Peter Gasston: The Book of CSS3: A Developer's Guide to the Future of Web Design, No Starch Press, April 2011.
4. MARIJN Haverbeke : Eloquent Javascript – A modern Introduction to JavaScript, 3rd Edition, 2018
5. Michael Morrison: Head First JavaScript, O'Reilly, 2014

CA129: Fundamentals of Object Oriented Programming (200 Marks)

Contact Hours: 07

Pre-requisite: CA123: Foundation of Programming.

Methodology & Pedagogy: During the Theory sessions concept will be covered with real world examples to understand the application and usage of object oriented programming over procedural programming. During Practical sessions, students will implement the concepts using various assignments and case study.

Outline of the Course:

Unit No.	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1.	Introduction to Object Oriented Programming	06	36
2.	Classes and Objects	08	
3.	Polymorphism	09	
4.	Inheritance	09	
5.	Exception Handling and Type cast operators	09	
6.	Managing I/O formats and operations	07	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total: 84

Detailed Syllabus:

Unit - I: Introduction to Object Oriented Programming

Hours:06

Structured programming vs. object oriented programming, Introduction to C++: structure of a C++ program Tokens, inline function, pass by reference, default arguments, OOP characteristics.

Unit - II: Classes and Objects

Hours:08

Define class, objects, visibility modes, static members, friend function, Constructors and Destructors, Default Constructor, Copy constructors, Parameterized Constructor, this keyword.

Unit - III: Polymorphism

Hours:09

Introduction of Static Binding, Function Overloading and ambiguity raised in function overloading,;Operator overloading through member function and friend functions, type conversions from primitive to class, class to primitive and class to class.

Unit - IV: Inheritance

Hours:09

Objective of Inheritance, types of inheritance, impact of access modes during inheritance, Virtual base classes, Dynamic Binding, Virtual functions, Pure virtual functions, Abstract class, Early vs. Late binding.

Unit - V: Exception Handling and Type Cast Operators

Hours: 09

Introduction to Exception handling, catching class types, using multiple catch statements, exception handling options, creating custom exceptions, introduction to cast operators, const cast, static cast, reinterpret cast, dynamic cast.

Unit - VI: Managing I/O Formats and Operations

Hours:07

Understand and apply concepts from various header files like iostream. Iomanip ,fstream, etc. opening and closing file, reading and writing text files and binary files, performing random access on files, handle command line arguments.

Core Books:

1. Herbert Schildt: C++: A Beginner's Guide, 2nd Edition Paperback, McGraw-Hill,2003.
2. E Balagurusamy: Object Oriented Programming with C++ Paperback, McGraw Hill India,2017.

Reference Books:

1. Yashavant Kanetkar: Let Us C++, Paperback, BPB Publications,2020.
2. Robert Lafore: Object Oriented Programming in C++, 4th Edition, Sams Publications,2002.
3. Bruce Eckel:Thinking in C++, Volume 1, 2nd Edition, Pearson Education,2006.

Web References:

1. <https://www.geeksforgeeks.org/c-plus-plus/> [For Entire Syllabus]
2. <https://google.github.io/styleguide/cppguide.html> [For coding standards and concepts]
3. http://www.tutorialspoint.com/cplusplus/cpp_basic_input_output.htm [For Practicals]

Course Outcomes: Upon successful completion of the course, the students will:

C01 :	Understand the basic structure of C++ program and understand the concept of object oriented programming characteristics.
C02 :	Understand the concept of Constructor and Destructor and able to create class and objects.
C03 :	Understand the need of Polymorphism and implement static polymorphism
C04 :	Understand the purpose of Inheritance, identify relations between classes, implement inheritance and perform dynamic binding.
C05 :	Able to handle the runtime errors or exceptions in C++ and use type cast operators. Able to read input from device, file, command line arguments and apply formats to input and output.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		C01	C02	C03	C04	C05
1	Introduction to Object Oriented Programming	✓				
2	Classes and Objects		✓			
3	Polymorphism			✓		
4	Inheritance				✓	
5	Exception Handling and Type cast operators					✓
6	Managing I/O formats and operations					✓

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CAI30: Database Fundamentals

(200 Marks)

Contact Hours: 07

Pre-requisite: Basic knowledge of working with computer

Methodology & Pedagogy: During the theory lectures, concepts for data storage will be discussed. Also DBMS and RDBMS concepts will be discussed in depth. The database applications used in the real world will be discussed with necessary examples. During the laboratory hours' students will implement the concepts that are discussed during lecture.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1	Introduction to Database System	04	36
2	Data Modeling using Entity Relationship Model	08	
3	Relational Data Modeling	08	
4	Database Design Methodology	08	
5	Schema Definition, Constraints, Queries	10	
6	Advanced Query Processing	10	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total Hours: 84

Detail Syllabus:

Unit I: Introduction to Database System

Hours: 04

Basic Concepts: data, **information**, **file**, database, database systems, database management system Purpose and advantages of Database management system (over file systems), **Applications of DBMS** Various data models – ER Model and Relational Model, Three level architecture, Structure of DBMS, Database actors and workers

Unit II: Data Modeling using Entity Relationship Model

Hours: 08

Entity Types, Entity Sets, Attributes, Keys, Relationship Types, Relationship Sets, Roles and Structural Constraints, Weak Entity Types, ER Diagram – Notations and fundamentals, Concept of Generalization and Specialization, Associative Entity, Conversion from ER Model to Relational Model

Unit III: Relational Data Modeling

Hours: 08

Relational Model Concepts, Relational Model Constraints, Relational Model Schemas, Update Operation, Transactions, Dealing with Constraint Violations, Relational Algebra and Calculus, **Difference between ER Model and Relational Model.**

Unit IV: Database Design Methodology

Hours: 08

Functional Dependency and Normalization for Database – Informal Design Guidelines for Relational Schemas, Functional Dependencies, Normal Forms (1NF, 2NF, 3NF, BCNF, 4NF, 5NF), Codd Rules

Unit V: Schema Definition, Constraints, Queries

Hours: 10

Table Fundamentals: Basic Data types, Create Table Command, Viewing Data in the tables, sorting, Insert, Delete and Update Statements in SQL, Modifying the structure of tables, renaming table, truncating table, destroying table.; Data Constraints and Functions: - Pseudo columns, Null values, TAB table, DUAL table Operators, Data constraints, Type of data constraints, modifying constraints, working with data dictionary and use of USER_CONSTRAINTS Functions – introduction, merits and demerits, types of functions Numeric functions, Character functions, Date functions, Conversion functions, Aggregate functions

Unit VI: Advanced Query Processing

Hours: 10

Union, Intersect and Except Nested Queries – Introduction, Co-related Nested Queries, Set Comparison Operators Aggregate Operators, Group By clause, having clause, Order by clause Null Values – Comparison using Null Values, Logical Connectivity – AND, OR and NOT, Impact on SQL constructs, Joins (Inner Join, Outer Join, Self-Join, Equi Join, Cross Join) Complex Integrity Constraints in SQL – constraints over single table, domain constraints and distinct types Creation and manipulation of database objects – indexes, views, sequences and synonym.

Core Books:

1. RamezElmasri, Shamkant B. Navathe : Fundamentals of Database Systems , 5th Edition, , Pearson Publication.
2. Ivan Bayross : SQL, PL/SQL – The programming Language Oracle.
3. Ramkrishnan, Gehrke : Database Management Systems, 3 rd Edition, McGrawHill Publication.

Reference Books:

1. Silberschatz, Korth, Sudarshan : Database System Concepts, 5th Edition, McGraw Hill.
2. C.J.Date, a Kannan, S Swaminathan : An Introduction to Database Systems, 8th Edition, Pearson Education,(Equivalent Reading).
3. Scoot Urban : Oracle 9i, PL/SQL Programming, Oracle Press.
4. S. K. Singh : Database Systems: Concepts, Design and Applications, Pearson Education
5. Peter Rob, Carlos Coronel: Database Systems: Design, Implementation and Management, 7th Edition, Cengage Learning, 2007.
6. Anjali, Amisha, Roopal and Nirav : Practice book on SQL and PL/SQL.
7. Leon and Leon : Database management Systems, Vikas Publication.

5. <http://plsql-tutorial.com/> [For PL/SQL]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Understand basic concepts regarding data, database systems and various data models.
CO2 :	Understand various data modeling techniques and entity relationship models.
CO3 :	Learn about relational data model and related concepts.
CO4 :	Gain insights into database design, SQL and normalization concepts.
CO5 :	Advanced query processing

Course Outcomes Mapping:

HS201.02 C: PAINTING

(100 Marks)

Contact Hours: 30 Hrs.

Pre-requisite: None

Instructional Methods and Pedagogy: Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

Evaluation: The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation: Students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Participation	-	05	05
2	Performance/ Activities	-	05	05
3	Project	-	15	15
4	Attendance	-	05	05
Total				30

External Evaluation: University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical	-	70	70
Total				70

Outline of the course:

Unit No.	Title of the unit	Minimum number of hours
1	An Introduction to Painting	02
2	Drawing from Nature and Object	04
3	Colour Design and Colour Value	06
4	Composition and Perspective	06
5	Figure Drawing and Proportion	04
6	Sketching	04
7	Contemporary Issues in Painting	04

Practical Hours: 30 Hrs.

Total hours: 30 Hrs.

Detailed Syllabus:

Unit – I	An Introduction to Painting • An Introduction to Painting • Principles of Composition • Medium and Techniques of Painting • History of Painting: Folk Indian Painting / Western Painting • 2D and 3D Painting	02 Hours
Unit – II	Drawing from Nature and Object • Objects of Drawing: Nature and Manmade / Artificial Objects • Drawing Still / Live Objects • Drawing from Memory • Drawing from Life	04 Hours
Unit - III	Light and Shade • Color Theory: Color wheel (primary/secondary, complementary), transparency/opacity, hue, value (intensity, brightness), chroma (saturation, purity) & temperature (warm/cold) • Color Contrast & Attributes: Interaction, harmony, psychology/mood, culture & expression • Media Characteristics & Surfaces: Acrylic, oil, paper, wood & canvas (primed/unprimed)	06 Hours
Unit – IV	Composition and Perspective • Composition: Space, movement, balance, asymmetry, rhythm, shapes, proportion & lighting • Perspective: An approximate reproduction • Types of Perspectives: Linear Perspective, One-point Perspective, Two-point Perspective, Three-point Perspective, Four-Point Perspective	06 Hours
Unit – V	Figure Drawing and Proportion • Proportions of the Human Body • Three views – Anterior (front), Lateral (side) and Posterior (back) • Fundamental Proportion – The Big Three	04 Hours
Unit – VI	Sketching • Sketching and Freehand • Sketching Techniques • Sketch and Drawing Medium	04 Hours
Unit VII	Contemporary Issues in Painting • Contemporary Indian Art • Pioneers of Contemporary Indian Art • Contemporary Issues in Painting	04 Hours

Course Outcome (COs): At the end of the course, the students will be able to:

CO1	have cultivated a sense of creativity.
CO2	be appreciative of art history, art criticism and aesthetics.
CO3	be able to recognize the elements of arts in painting.
CO4	have better cognizance and association of meaning of colors, shapes, and composition.
CO5	be able to acknowledge the principles of painting as in design and colors, concept, medium and formats.
CO6	have instantaneous painting experience about designing, lights, shades and colors and such other important aspects.

Outline of the course:

Sr. No.	Title of the unit	Minimum number of hours
1	An Introduction to Photography	03
2	Camera and Operating System	05
3	Light and Shade	10
4	Composition	09
5	Contemporary Issues in Photography	03

Practical Hours: 30 Hrs.

Total hours: 30 Hrs.

Detailed Syllabus:

Unit – I	An Introduction to Photography	03 Hours
	• Art, Design and Visualization • Basics of Photography and Various Types of Photography • Basics of Post Production • A Brief History of Photography: • Early Experiments and Later Developments	
Unit – II	Camera and Operating System	05 Hours
	• Role of Camera in the Photography • Types of Camera Pin-hole, box, folding, large and medium format cameras, single lens reflex (SLR) and twin lens reflex (TLR), miniature, subminiature and instant camera • Principal Parts of Photographic Camera Lens, Aperture, Shutters, various types and their functions, focal plane shutter and in-between the lens shutter, shutter synchronization, self-timer • Types of Lenses Single (meniscus), achromatic, symmetrical and unsymmetrical lenses, telephoto, zoom, macro, supplementary and fish-eye lenses • Different Models of Camera, their Features and Operating Systems • Camera and Size of the Image, Speed and Power of Lens	
Unit – III	Light and Shade	10 Hours
	• Reflection and refraction of light • Dispersion of light through a glass prism, lenses • Colour Filters: Different kinds, Red, yellow, green, neutral density, half filters, filter factor, colour correction filter • Photographic Light Sources: Natural source, the Sun, nature and intensity of the sunlight at different times of the day, different weather conditions • Artificial light sources: Nature, intensity of different types of light sources used in photography namely; (i) Photo flood lamp, (ii) Spot light, (iii) Halogen lamp, Barn doors and snoot, lighting stands Flash unit: Bulb flash and Electronic flash, main components, electronic flash units, studio flash, slave unit, multiple flash, computer flash, x-contact, exposure table.	
Unit – IV	Composition	09 Hours
	• Different kinds of image formations • Principal focus and focal length of the lens • Depth of field, angle of view and perspective • Perspective and composition • Rules of composition	
Unit – V	Contemporary Issues in Photography	03 Hours
	• Present Day Photography • Contemporary Photographers and their Contributions • Major Issues in Contemporary Photography

Course Outcome (COs): At the end of the course, the students will be able to:

CO1	Understand, appreciate and demonstrate innovative approach, beauty and acute acumen in the area of photography
CO2	Develop photography skills and become familiar with the functions and importance of the visual elements of nature and artificial objects
CO3	Become independent thinkers who will contribute inventively and critically to culture through the making of art photography
CO4	Have thorough understanding and acute sense of light and shade, composition, and presentation of a piece of an art
CO5	Experiment and Represent the cultivated sense and skills in Photography to the mass
CO6	Prepare an impressive portfolio encompassing holistic approach to art and other the areas of study

Course Articulation Matrix:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

HS205.02 C: MEDIA AND GRAPHIC DESIGN

(100 Marks)

Contact Hours: 30 Hrs.

Pre-requisite: None

Instructional Methods and Pedagogy: Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

Evaluation: The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation: Students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Participation	-	05	05
2	Performance/ Activities	-	05	05
3	Project	-	15	15
4	Attendance	-	05	05
Total				30

External Evaluation: University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical	-	70	70
Total				70

Outline of the course:

Sr. No.	Title of the unit	Minimum number of hours
1	An Introduction to Media and Graphic Design	03
2	Layout and Design	07
3	Form and Space	06
4	Computer Graphics	04
5	Fonts	04
6	Basic Print Media	03
7	Contemporary Issues in Graphic Design	03

Practical Hours: 30 Hrs.
Total hours: 30 Hrs.

Detailed Syllabus:

Unit – I	An Introduction to Media and Graphic Design	03 Hours
	• Creating Art, Art in Context and Art as Inquiry • History of Graphic Design • Constructional, Representational, and Simplification Drawing	
Unit – II	Layout and Design	07 Hours
	• Layout, Design and Aesthetics • Elements of Design • Principles of Design: Harmony, Balance, Rhythm, Perspective, Emphasis, Orientation, Repetition and Proportion • Impact/function of Design • Indigenous design practices • Role of design in the changing social scenario	
Unit – III	Form and Space	06 Hours
	• Types of Forms: Man-made, Nature • Types of Space: Negative and Positive • Composition of Form and Space to create Layout • Exploring Creativity	
Unit – IV	Computer Graphics	04 Hours
	• An Introduction to Graphic Software • Flash, Coreldraw, Illustrator and Photoshop • Pre-press Process	
Unit – V	Fonts	04 Hours
	• Construction of Type • Anatomy of Type • Visual Language • Creating Logo and Symbol	
Unit – VI	Basic Print Media	03 Hours
	• An Introduction to Press and its Development Phases • Types of Press • Types of Printing Technologies • Post-press Processes	
Unit – VII	Contemporary Issues in Graphic Design	03 Hours
	• Present Day Graphic Designs • Contemporary Designers and their Contribution • Major Contemporary Issues in Graphic Design	

Reference Books

Course Outcome (COs): At the end of the course, the students will be able to:

CO1	have cultivated a sense of creativity.
CO2	be appreciative of art and designs, art criticism and aesthetics.
CO3	be able to recognize the elements of arts in graphic design.
CO4	have better cognizance and association with the meaning of designs, shapes, colors, print and medium.
CO5	be able to design graphics using computer softwares like Photoshop, CorelDraw, and Illustrator.

Course Articulation Matrix:

HS209.02 C DRAMATICS

(100 Marks)

Contact Hours: 30 Hrs.

Pre-requisite: None

Instructional Methods and Pedagogy: Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

Evaluation: The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation: Students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Participation	-	05	05
2	Performance/ Activities	-	05	05
3	Project	-	15	15
4	Attendance	-	05	05
Total				30

External Evaluation: University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical	-	70	70
Total				70

Outline of the course:

Sr. No.	Title of the unit	Minimum number of hours
1	Introduction to Drama	06
2	History of Drama and Contemporary Theatre	06
3	Theatre Design and Techniques	06
4	Technicalities of Stage Performance	08
5	Contemporary Trends in Drama	04

Practical Hours: 30 Hrs.

Total hours: 30 Hrs.

Detailed Syllabus:

Unit – I	Introduction to Drama	06 Hours
	• Introduction to performing arts • Drama - An art, a socializing activity, & a way of learning • Form of Drama • Elements of Drama • Types of Drama	
Unit – II	History of Drama and Contemporary Theatre	06 Hours
	• Important world dramatists & drama—from Greek to modern • Evolution of contemporary theatre in the context of developments in Indian theatre • Major Movements in Drama	
Unit – III	Theatre Design and Techniques	06 Hours
	• Theatre Architecture • Stage craft: Set, light, costume, make up, sound, props • Theatre techniques: from selection of script to final performance	
Unit – IV	Technicalities of Stage Performance	08 Hours
	• Selection of plot and character • Improvisation • Movement • Voice, Speech, Imagination • Character Development • Scene Enactment	
Unit – V	Contemporary Trends in Drama	04 Hours
	• New Tendencies in theatre • Drama and Society • Using drama for Social Change and Education

4. <https://www.backstage.com/magazine/article/theater-trends-broadway-2019-66726/>

Course Outcome (COs): At the end of the course, the students will be able to:

CO1	be aware about the concept of performing art and its nuances.
CO2	display a working knowledge of historic of drama, its development and current trends in dramatics.
CO3	demonstrate skills in the technical/design preparation and execution of a theatre performance.
CO4	demonstrate the ability to work collaboratively.
CO5	develop essential transferable skills in various relevant areas of the theatre.

Course Articulation Matrix:

HS210.02C - CONTEMPORARY DANCE

(100 Marks)

Contact Hours: 30 Hrs.

Pre-requisite: None

Instructional Methods and Pedagogy: Teaching will be practical based on the hands on experiences, live and interactive sessions. It will run in the workshop mode. Four Workshops (each of a day) will be organized during the semester.

Evaluation: The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation: Students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Participation	-	05	05
2	Performance/ Activities	-	05	05
3	Project	-	15	15
4	Attendance	-	05	05
Total				30

External Evaluation: University Practical examination will be for 70 marks and will test the performance, activities and creative presentations of the students with reference to the course selected:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical	-	70	70
Total				70

Outline of the course:

Sr. No.	Title of the unit	Minimum number of hours
1	Introduction to dance	04
2	Types of Dance	06
3	Basic Elements of Dance	04
4	Technical Skills in Professional Contemporary Dance	06
5	Contemporary Trends in Dance	10

Practical Hours: 30 Hrs.

Total hours: 30 Hrs.

Detailed Syllabus:

Unit – I	Introduction to dance	04 Hours
	• Dance as a Performing Art • Dance as a Medium of Expression • History and Development of Dance	
Unit – II	Types of Dance	06 Hours
	• Western dance and classical dance • Salsa, rumba, hip hop, tap dance, belly dance, etc. • Indian Classical Dance forms: Odissi, Bharatanatyama, Kathak, Kathakali, Kuchipudi etc. • Other Regional dance forms in India	
Unit – III	Basic Elements of Dance	04 Hours
	• Movements of different parts of a body for Expression • Concepts of: Nritya, Laya and Taal	
Unit – IV	Technical Skills in Professional Contemporary Dance	06 Hours
	• Dance technique: alignment, balance, co-ordination, flexibility and control • Expressive / presentation skills: Dynamic energy, physical engagement with the given material and stage, etc. • Skills and processes of rehearsal and production: • physical energy, stamina and athleticism	
Unit – V	Contemporary Trends in Dance	10 Hours
	• Prevalent trends and techniques in contemporary dance • Future trends in contemporary dance form • On Stage Performance

Course Outcome (COs): At the end of the course, the students will be able to:

CO1	be able to develop ability to express through the form of dance.
CO2	have enhanced aesthetic sensitivity.
CO3	have improved concentration, mental alertness, quick reflex action, and physical agility.
CO4	be able to express a natural way human feelings and expressions by creating harmony.
CO5	be able to deliver contemporary dance performance.

CA226-Computer Oriented Numerical Methods

(100 Marks)

Contact Hours: 04

Pre-requisite: None

Methodology & Pedagogy: During theory lectures illustrations of certain real world problems requiring numerical computations inference will be explained. Numerical methods will be introduced as tools for solving such problems also be emphasized.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours
1	Introduction to Numerical Methods	6
2	Interpolation	7
3	Numerical Integration and Differentiation	8
4	Solution of Linear Equation	10
5	Solution of Differential Equations	9
6	Solution of Partial Differential Equations	8

Total Hours (Theory): 48

Total Hours: 48

Detailed Syllabus:

Unit - I: Numerical Methods

Hours: 06

Introduction to Numerical Methods, Various methods such as Bisection, False-Position and Newton-Raphson methods

Unit - II: Interpolation

Hours:07

What is an interpolation, Difference tables, Newton forward and backward Interpolation formula, Lagrange's formula, Newton's Divided Difference Formula?

Unit - III: Numerical Integration and Differentiation

Hours:08

Numerical Integration, Trapezoidal rule, Differentiating Continuous function (Two point and Three-point formula), Tabulated function and its maxima and minima.

Unit - IV: Solution of Linear Equation

Hours:10

Solution of Linear Equation, Gauss-Jordan Elimination methods, Gauss - Seidal and Gauss Jacobi Interactive methods

Unit - V: D Solution of Ordinary Differential Equations:

Hours:09

Solution of Ordinary Differential Equations, Taylor Series and Euler Methods, Runge-Kutta Methods,

Unit - VI: Solution of Partial Differential Equations:

Hours:08

Review and examples of partial differential equations, classification of partial differential equations, Difference equation, Laplace's equation and Poisson's equation

Core Books:

1. D. N. Datta: Computer Oriented Numerical Methods, Vikas Pub. House, 2012.
2. S.S. Sastry : Introductory methods of Numerical Analysis, Prentice Hall of India, 4th edition 2006

Reference Books:

1. V. Rajaraman Computer Oriented Numerical Methods, 3rd Edition, Prentice-Hall of India Pvt.Ltd, 3rd edition, 2016

5. <https://sites.google.com/site/nmmat202/file-cabinet> [Lecture notes of Numerical methods]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Able to use Numerical methods in computer technology.
CO2 :	To learn Interpolation.
CO3 :	To Learn the concepts of Numerical Integration and Numerical Differentiation
CO4 :	To understand linear equations.
CO5 :	To learn techniques to solve ordinary differential and partial differential equations

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction to Numerical Methods	✓				
2	Interpolation		✓

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA227: Computer Oriented Management System (100 Marks)

Contact Hours: 4

Pre-requisite: None.

Methodology & Pedagogy: During the Theory sessions, illustrations of working real time information system will be demonstrated. Industrial visits will be arranged in order to demonstrate actual functioning of such systems. Students will be required to carry out a case study of such system.

Outline of the Course:

Unit No.	Title of the Unit	Minimum Number of Hours
1.	Introduction to Information System	07
2.	Transaction Processing Systems	08
3.	Management Information System	09
4.	Decision Support System	09
5.	Knowledge Management & Executive Support Systems	08
6.	Introduction To ERP and Technology	07

Total Hours (Theory): 48

Total: 48

Detailed Syllabus:

Unit - I: Introduction to Information System

Hours:07

Data & Information, what is a system, Types of Systems, Types of information, Quality of Information, what is an Information System, Functions of Information System, classification of an Information System, Major Types of Information Systems, Interrelationship of Information Systems.

Unit - II: Transaction Processing Systems

Hours:08

Introduction of Transaction Processing System (TPS), Transaction Processing System (TPS) Architecture, Transaction Processing System (TPS) Life cycle, Methods of Transaction Processing System (TPS), Information System Availability Control, Illustrations and live demonstration of TPS such as Banking System, Railway reservation system etc.

Unit - III: Management Information System

Hours:09

Introduction to Management: Approaches of Management, Function of Management, System from Functional Perspective, Reports of Management Information System, A business perspective of MIS, Dimensions of MIS, contemporary Approaches to Information System.

Unit - IV: Decision Support System

Hours:09

Business value of Improved Decision making, Types of Decision, Decision making Process, The difference between MIS and DSS, Components of DSS, System for Decision Support Group Decision Support System, Business value of GDSS.

Unit - V: Knowledge Management & Executive Support Systems

Hours:08

Important Dimensions of knowledge, Organizational learning and Knowledge Management, The Knowledge Management value chain, Overview of different types of Knowledge Management Systems, Characteristics of ESS, The Role of ESS in the Firm, Business value of ESS, Monitoring Corporate Performance, Working Examples of ESS.

Unit - VI: Introduction to ERP and Technology Hours:07

An overview of ERP, Basic ERP Concepts, Risk and Benefits of ERP, ERP and Related Technologies, Business Intelligence, Some case studies on ERP or Information system

Core Books:

1. K. C. Laudon and J. P. Laudon: Management Information Systems, 12th Edition, Pearson Education.
2. Alexis Leon: ERP Demystified, Second Edition, Tata McGraw-Hill.

Reference Books:

1. W.S. Jawadekar: Management Information Systems, 2nd Edition, Tata McGraw-Hill.

CA228: System Analysis and Design (100 Marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: During theory lectures emphasis will be given on understanding how Information Systems are designed and constructed and how major modifications are made to existing systems, analyse business needs for information and develop an appropriate strategy to solve a particular business problem, understand the issues associated with physical design, utilize some of the tools used by systems analysts in the design of Information Systems, a significant portion of the course will deal with computer aided system engineering (CASE) tools and techniques in the context of a case study.

Outline of the Course:

Unit No.	Title of the Unit	Minimum Number of Hours
1.	Introduction to System Development	05
2.	Classical Systems Development Methodology	07
3.	Introduction to Data flow diagrams and Prototype design	07
4.	Systems Design	06
5.	Quality assurance, maintenance and Audit	06
6.	Designing reliable system, training and conversion	05

Total Hours (Theory): 36

Total Hours: 36

Detail Syllabus:

Unit I: Introduction to System Development

Hours 05

Concept of system, Basic components, Information systems categories, Business Information Systems, Examples of real-life systems, System analyst – meaning, role and need, Users, need of information system development, Application development portfolio, Integration of portfolio, Controlling and monitoring committees.

Unit II: Classical Systems Development Methodology

Hours 07

Classical Systems Development Life Cycle (SDLC) method, Requirement determination, Fact finding techniques, Modern methods for determining systems requirements, Joint Application Development Program, Tools for documenting procedures and decisions, Tools for systems development, understanding the format of system requirement specification.

Unit III: Introduction to Data flow diagrams and Prototype design

Hours 07

Structured Analysis Development Strategy, Data Flow Diagrams (DFDs) for analysis and design, Physical and logical DFDs, Purpose of Application Prototyping, Steps in prototype method, Use of prototypes, Tools for prototyping, Strategies for prototype development, misconceptions about prototyping

Unit IV: Systems Design

Hours 06

Analysis to design transition, Design of output system, Design of input system, Design of security and control, Design of user interface and Design of Database Interaction, design of software, software design and documentation tools.

Unit V: Quality assurance, maintenance and Audit

Hours 06

Introduction to quality assurance, levels of quality assurance, the testing process with test data: Program testing, Link testing, Full system testing with live data.; Control: audit and security of information systems, why controls are needed, objectives of control, techniques used in control, auditing information systems security of information systems, maintenance, types of maintenance

Unit VI: Designing reliable system, training and conversion

Hours 05

Introduction to software reliability, approaches of software reliability, user training, training methods and conversion, conversion methods.

Core Books:

1. James A Senn : Analysis and Design of Information System, McGraw Hill International, 2003.
2. Kendall and Kendall : Systems analysis and Design, 5th Edition, Prentice-Hall of India Private Limited, 2003.

Reference Books:

1. V. Rajaraman: Analysis and Design of Information Systems, Prentice-Hall of India Private Limited, 2003.
2. Jeffrey L. Whitten, Lonnie D. Bentley and Kevin C. Dittman : Systems Analysis and Design Methods, Tata McGraw Hill Publishing Co. Ltd., 2001.
3. Tuthill and Leavy : Knowledge Based Systems : Managers Perspectives : Tab professional and Reference Books, 1991.

Web References:

1. <http://lecture-notes-forstudents.blogspot.in/2010/04/system-analysis-and-design-sad.html>
[For referring SDLC]
2. <http://www.slideshare.net/aroravinay/1-introduction-to-ado-infosys>[For Introduction of System analysis and design]
3. <http://bcastuff.blogspot.in/p/sad-notes.html#.U6uW-ZzW1eo>[For brief notes on System analysis]
4. <http://www.eis.mdx.ac.uk/staffpages/geetha/bis2030/DFD.html>[For DFD notes and examples]
5. <http://faculty.washington.edu/ytan/is460/notes/LN11.pdf>[For DFD notes and examples]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Understand the basics of system, type of information systems, system analyst- meaning, role and need, portfolio development of the system, the methods or ways to review and select the project.
CO2 :	Understand the concept of SDLC, the fact finding techniques, detailed study of modern methods for collecting the requirements of system to be developed, Decision and procedure documentation and a brief introduction to the SRS document.
CO3 :	Learn the concept of structured analysis, detail study of DFD and its types and the study of data dictionary.
CO4 :	Gain understanding of prototypes, its uses and tools for development, clarification of the misconception about the prototype and categories of tools including the use of automated tools like case tools.
CO5 :	Be able to learn objective of collecting data, methods to collect data for designing the input and output interface, the concept and objective of database design,
CO6 :	Study the designing of reliable and maintainable systems, documentation tool, quality assurance management and need for user training.

CA229: Fundamentals of Data Structures and Algorithms (200 Marks)

Contact Hours: 07

Pre-requisite: CA123: Foundation of Programming, CA129: Fundamentals of OOP's

Methodology & Pedagogy: During the theoretical lectures, the focus will be on understanding the fundamental ideas of data structures and algorithms, as well as how to use and select the most efficient data structures from a variety of options for various applications. Designing, analyzing, and implementing all types of data structures for addressing computational issues using a high-level programming language is emphasized in practical sessions.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1	Introduction to Data Structures and Algorithms	06	36
2	Linear Data Structures Stack and Queue	10	
3	Dynamic Linear Data Structures	09	
4	Trees Data Structure	08	
5	Graph Data Structure	08	
6	Sorting and Searching	07	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total Hours: 84

Detail Syllabus:

Unit - I: Introduction to Data Structures and Algorithms

Hours: 06

Data type, Data object, Data Structure, Abstract Data type, Types of Data Structures, Introduction to Algorithms, Relationship among Data, Data Structures and Algorithms, Analysis of Algorithms, space and time complexity algorithm.

Unit - II: Linear Data Structures Stack and Queue

Hours: 10

Linear Data Structures using sequential organization, Concepts of Ordered list, Representation of Stacks using sequential organization, Applications of Stack, Recursion, Application of Recursion, Concepts of Queues, Realization of Queues using sequential organization, Multiqueue, Deque, Priority Queue, Applications of Queue.

Unit - III: Dynamic Data Structures

Hours: 09

Linked list, Comparison of sequential and linked organizations, Dynamic Memory Management, Single linked list, Double linked list, Applications of linked list.

Unit - IV: Trees Data Structure

Hours: 08

Basic Terminologies, Definition and concepts, Representation of Binary Tree, Operations on Binary Tree, Types of Binary Trees, B Tree, B+ Tree Indexing, Trie Tree Indexing.

Unit - V: Graph Data Structure

Hours: 08

Graph Terminology, Representation of Graph, Operations on Graph, Applications of Graph Structure.

Unit - VI: Sorting and

Hours: 07

Sorting Notations and Concepts, Sorting Techniques, Sequential Searching, Binary Searching, Search Trees, Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques,

Core Books:

1. Jean-Paul Tremblay, Paul G. Sorenson: An introduction to data structures with applications, 2nd Edition, Tata McGraw Hill Publications, Paperback.
2. Data structures A Programming Approach with C, D.S.Kushwaha and A.K.Misra, PHI
3. Varsha h. Patil, Data Structures Using C++, 1st Edition, Oxford University Press.
4. D. Samanta, Classic Data Structures, 2nd Edition, PHI Publications.

Reference Books:

1. Yashvant Kanethkar : Data structures through C++, 2nd Edition, BPB Publications.
2. Yedidyah Langsam, Moshe J. Augenstein, Aaron M. Tenenbaum : Data structures using C and C++ , 2nd Edition, Eastern economy edition, Pearson Education, 2015.
3. Mark Allen Weiss: Data Structures and Algorithm Analysis in C++, 3rd Edition, Pearson Education, 2017.
4. Reema Thareja: Data Structures using C, 1st Edition, Oxford University Press, 2012.

7. <http://nptel.ac.in/video.php?subjectId=106102064> [For Data Structures videos]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Design and apply appropriate data structures for solving computing problems
CO2 :	Understands and restates the fundamentals of basic data structures.
CO3 :	Explore and implement linear data structures like link list
CO4 :	Students will familiar with non-linear data structure like tree and graph
CO5 :	Apply Algorithm for solving problems like sorting, searching

CA230: Fundamentals of Operating Systems (200 Marks)

Contact Hours: 07

Pre-requisite: None

Methodology & Pedagogy: In order to achieve the course objectives, students will be introduced to the basic operating system concepts and basic functions. During practical sessions, the students will be required to use DOS and UNIX commands to understand the system properties and to write script files.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1	Operating System Fundamentals	6	36
2	Memory Management	10	
3	Processor Management	10	
4	Device Management	8	
5	File Management	6	
6	Introduction to Shell Script	8	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total Hours: 84

Detailed Syllabus:

Unit - I: Operating System Fundamentals:

Hours: 06

What is an operating system, Brief history of an operating system, Pyramid structure of an operating system, Operating system hardware and software, Evolution of an operating system, types of operating system, Batch system, Interactive system, Real time system, Hybrid system, Shell, compiler, assembler, interpreter?

Unit - II: Memory Management:

Hours: 10

Memory management of early system, Fixed partition, Dynamic partition, Re-locatable dynamic partition, Best fit and first fit allocation method, De-allocation, Paged memory allocation, Demand paging allocation, segmented memory allocation, Virtual memory, cache memory, Associative memory, Page replacement policies.

Unit - III: Processor Management:

Hours: 10

What is job and Process, Multiprogramming concept, Process scheduler, Job scheduler, various process states, Thread control, Process Control Block (PCB), Processor scheduling policies, FCFS, SJN, SRT, RR, EDF, Multiple level queues

Unit - IV: Device Management:

Hours: 08

Types of devices, dedicated device, Virtual device, shared device, I/O devices in cloud, Sequential Access Storage Media, Direct access storage media, Device handler seek strategies, FCFS, SSTF, SCAN and LOOK strategies, Optical disk storage, RAID

Unit - V: File Management:

Hours: 06

Fundamentals of File management, File naming conventions, Fixed length and variable length records, Physical file organization, Physical storage allocation, File access methods, File control matrix, File compression

Unit - VI: Introduction to Shell Script:

Hours: 08

Shell Script, Shell environment, Making Script interactive, Command Line Argument, Evaluating Expression, Operator, Control Statement, Looping statement.

Core Books:

1. Ann McIver McHoes, Ida M Flynn: Understanding Operating System, 7th Edition, Cengage Learning, 2014
2. William Stallings: Operating Systems Internals and Design Principles, 5th Edition, PHI, 2005.
3. Sumitabha Das: Unix concepts & application, 4th Edition, Tata McGraw Hill, 2010.
4. Kenneth Rosen, Douglas Host, James Farber and Richard Rosinski: The Complete Reference, Tata McGraw Hill, 1999.

Reference Books:

1. Silberschatz: Operating System Concepts, 5th Edition, John Wiley & Sons (ASIA) Ltd., 2008.
2. Mark G. Sobell: A Practical Guide to Linux, Pearson Education, 1997.
3. K.J.George, Operating System Concepts and Principles, Sroff Publishers, 2003

5. <http://www.ics.uci.edu/~ics143/lectures.html> [Lecture notes of OS]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	To understand the fundamental concepts of an operating System.
CO2 :	To understand memory allocation and de-allocation methods.
CO3 :	To study fundamentals of processor and its scheduling policies.
CO4 :	To study various supported device and file access technologies.
CO5 :	Learning basic shell programming

Course Outcomes Mapping:

HSI21.02 C: CREATIVITY, PROBLEM SOLVING AND INNOVATION (100 Marks)

Contact Hours: 03

Pre-requisite: Creative Problem Solving (<https://www.coursera.org/learn/creative-problem-solving>)

Outline of the Course:

Unit No.	Title of the Unit	Minimum number of hours
1.	Introduction to Creativity, Problem Solving and Innovation	06
2.	Questioning, Learning and Visualization	06
3.	Creative Thinking and Problem Solving	06
4.	Logic, Language and Reasoning	06
5.	Contemporary Issues and Practices in Creativity and Problem Solving	06

Total Hours (Practical): 30

Total Hours: 30

Detailed Syllabus:

Unit - I	Introduction to Creativity, Problem Solving and Innovation Definitions of Creativity and Innovation, Need for Problem Solving and Innovation, Scope of Creativity in various Domains, Types and Styles of Thinking, Strategies to develop Creativity, Problem Solving and Innovation skills	Hours: 06
Unit - II	Questioning, Learning and Visualization Strategy and Methods of Questioning, Asking the Right Questions, Strategy of Learning and its Importance, Sources and Methods of Learning, Purpose and Value of Creativity Education in real life, Visualization strategies - Making thoughts Visible, Mind Mapping and Visualizing Thinking	Hours: 06
Unit - III	Creative Thinking and Problem Solving Creative Thinking and its need, Strategy of Thinking Fluency, Generating all Possibilities, SCAMPER Technique, Divergent Vs Convergent Thinking, Lateral Vs Vertical Thinking, Fusion of Ideas for Problem Solving, Applying strategies for Problem Solving	Hours: 06
Unit - IV	Logic, Language and Reasoning Basic Concepts of Logic, Statement Vs Sentence, Premises Vs Conclusion, Concept of an Argument, Functions of Language: Informative, Expressive and Directive, Inductive Vs Deductive Reasoning, Critical Thinking & Creativity, Moral Reasoning	Hours: 06

Unit - V Contemporary Issues and Practices in Creativity and Problem Solving Hours: 06

Cognitive Research Trust Thinking for Creatively Solving Problems, Case Study on Contemporary Issues and Practices in Creativity and Problem Solving

Text book:

1. R Keith Sawyer, ZigZag, The Surprising Path to Greater Creativity, Jossey-Bass Publication 2013
2. Michael Michalko, Crackling Creativity, The Secrets of Creative Genius, Ten Speed Press 2001

Reference book:

1. Michael Michalko, Thinker Toys, Second Edition, Random House Publication 2006
2. Edward De Beno, De Beno's Thinking Course, Revised Edition, Pearson Publication 1994
3. Edward De Beno, Six Thinking Hats, Revised and Update Edition, Penguin Publication 1999
4. Tony Buzan, How to Mind Map, Thorsons Publication 2002
5. Scott Berkum, The Myths of Innovation, Expanded and revised edition, Berkun Publication 2010
6. Tom Kelly and David Kelly, Creative confidence: Unleashing the creative Potential within Us all, William Collins Publication 2013
7. Ira Flatow, The all Laughed, Harper Publication 1992
8. Paul Sloane, Des MacHale & M.A. DiSpezio, The Ultimate Lateral & Critical Thinking Puzzle book, Sterling Publication 2002

Additional Readings

1. Keith Sawyer, Group Genius, The Creative Power of Collaboration, Basic Books Publication 2007
2. Edward De Beno, Lateral Thinking, Creativity Step by Step, Penguin Publication 1973
3. Nancy Margulies with Nusa Mall, Mapping Inner Space, Crown House Publication 2002
4. Tom Kelly with Jonathan Littman, The Art of Innovation, Profile Publication 2001
5. Roger Von Oech, A Whack on the Side of the Head. Revised edition, Hachette Publication 1998
6. Roger Von Oech, A Kick in the Seat of the Head, William Morrow 1986
7. Jonah Lehrer, Imagine How Creativity Works, Canongate Books Publication 2012
8. James M Higgins, 101 Creative Problem Solving Techniques, New Management Publication 1994
9. Scott G Isaksen, K Brain Doval, Donald J Treffinger, Creative Approach to Problem Solving, Sage Publication 2000
10. Donald J Treffinger, Scott G Isaksen, K Brainstead Dorval Creative Problem Solving An Introduction, Prufrock Press 2006
11. H Scott Fogler & Steven E. LeBlance, Strategies for Creative Problem Solving, Prentice Hall Publication 2008
12. Dave Gray, Sunni Brown and James Macanufo, Game Storming, O'reilly Publication 2010.
13. Howard Gardner, Creating minds, Basic Books Publication 1993
14. Mihaly Csikszentmihalyi, Creativity-Flow and Psychology of Discovery and Invention, Harper Publication 1996
15. Martin Gerdner, W. H., Aha! Insight, Freeman Publication 1978
16. Paul Sloane, Test Your Lateral Thinking IQ, Sterling Publication 1994

Web material:

1. Internet Search based May TED talks and other sources for videos, slide shares, problems, etc.

Course Outcome (COs): At the end of the course, the students will be able to

CO1	Demonstrate creativity in their day to day activities and academic output.
CO2	Solve personal, social and professional problems with a positive and an objective mindset.
CO3	Think creatively and work towards problem solving in a strategic way.
CO4	Initiate new and innovative practices in their chosen field of profession.
CO5	Give logical ideas, opinions, and solutions to problems.
CO6	Think critically over the situation and drawing conclusion.

Course Articulation Matrix:

CA23I: Fundamentals of Embedded System

(100 Marks)

Contact Hours: 03

Pre-requisite: None

Methodology & Pedagogy: In order to achieve the course objectives, students will be introduced to the basics of embedded system and its structure. Students will be introduced to various microcontrollers, analog and digital electronics components and sensors. Introduction to microcontroller based embedded system design with specifications, development and implementation will be explained. Students will also be introduced to basic programming of an embedded system.

Outline of the course:

Week No	Practical	Description
1 - 2	Introduction and demonstration to Embedded System	Embedded System, Embedded System Basics, Embedded system hardware and Software, Basics of Processor and controllers, Types of controllers, Microcontroller and Microprocessor, Architecture of 8051 and Arduino controller.
3 - 4	Introduction and demonstration to components used in embedded system using its applications	Introduction to bread board. LED, Switch, 7 segment LED display, Resistor, Capacitor, Inductor, Battery, Relay, Integrated Circuit, Potentiometer, DC and AC motor, Multi meter, Soldering iron, Sensor devices, Embedded applications.
5 - 6	Introduction of various software / online tools	Keil software, Tinker cad simulator for arduino controller, Proteus simulator, PCB designing software.
7 - 8	Basics of Embedded C Programming with controller	Embedded C data types, variables, constants, operators, control statements, loops, string, array.
9 - 10	GPIO Programming in embedded C	Interfacing various input / output components like LED, keypad matrix, push button switch, ON/OFF switch, toggle switch, 7 segment display and LCD display.
11 - 12	Basics of Sensor Programming	Interfacing with various sensors like temperature sensor, PIR sensor and ultrasonic sensor.

Total Hours (Practical): 36

Total Hours: 36

Core Books:

1. K. Shibu: Introduction to Embedded Systems, Tata McGraw-Hill Education, 2009
2. Michael Margolis, Brian Jepson, Nicholas Robert Weldin: Arduino Cookbook: Recipes to Begin, Expand, and Enhance Your Projects , O'Reilly Media Publisher, 3rd Edition, Kindle Edition, 2020

Reference Books:

1. Muhammad Ali Mazidi, Janice GillispieMazidi, Rolin D. McKinlay: The 8051 Microcontroller and Embedded Systems: Using Assembly and C, Pearson Education India, 2007
2. Massimo Banzì, Michael Shiloh: Getting Started with Arduino: The Open Source Electronics Prototyping Platform ,Make Communication, 3rd Edition, Kindle Edition, 2014

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	To understand fundamentals of embedded system and its components with its applications.
CO2 :	To study modern tools used to simulate embedded systems.
CO3 :	To learn Embedded C Programming.
CO4 :	To Interface GPIO devices.
CO5 :	To interface various sensors.

Course Outcomes Mapping:

Week No.	Practical Title	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction and demonstration to Embedded system	✓				
2	Introduction and demonstration to components used in embedded system using its applications	✓

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA232: Foundation of Multimedia (100 Marks)

Contact Hours: 03

Pre-requisite: Basic Office Automation Skills.

Methodology & Pedagogy: This course is focuses on providing hands-on experience in designing and development of Multimedia components using text, images and videos with the emphasis on job profile of Digital Marketer. Students will understand color, positioning, and other aspects of usage of Multimedia on various social media.

Outline of the course:

Week No	Practical	Description
1 - 2	Concept of colors, sizes, social media platforms	Students will learn about color combinations and some important tools/extensions, popular sizes used in various social media platforms.
3 - 4	Designing social media posts	Students will learn about designing social media post based on “Hook, Story and Offer”
5 - 6	Designing social media posts – carousal	Students will learn about designing social media post for carousal for more attention.
7 - 8	Understanding Video creation and edit	Students will learn about timeline, animation, transition, and editing of video
9 - 10	Creation of Portfolios	Students will learn to create portfolio for showcasing their creations when they start doing their own agencies.
11 - 12	Project based on learning	Students will do a small project based on whatever they have learned up to this.

Total Hours (Practical): 36

Total Hours: 36

Core Books:

1. Tay Vaughan: Multimedia, making it work: Edition 9th: Tata McGraw Hill Publication: 2014.
2. Ze-Nian Li, Mark S. Drew: Fundamentals of Multimedia : PHI: 2005

Reference Books:

1. Russell Brunson: Traffic Secrets: The Underground Playbook for Filling Your Websites and Funnels with Your Dream Customers: Hay House Business: 2020

Web References:

1. <https://designschool.canva.com/tutorials/> [Tutorials – Canva]
2. <https://help.invideo.io/> [Help – InVideo]
3. <https://www.youtube.com/c/canva> [Official YouTube channel - Canva]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Be able to identify the basic concepts of multimedia and the web.
CO2 :	Be able to use various multimedia tools.
CO3 :	Be able to design and create social media posts using popular tools for various requirements.
CO4 :	Be able to design and create videos using popular tools for various requirements.
CO5 :	Apply end-user design skills of different requirements in creative industry of digital marketing and able to start own digital marketing agency.

Course Outcomes Mapping:

Week No.	Practical Title	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1-2	Concept of colors, sizes, social media platforms	✓				✓
3-4	Designing social media posts			✓		✓
5-6	Designing social media posts – carousal			✓		✓
7-8	Understanding Video creation and edit				✓	✓
9-10	Creation of Portfolios		✓	✓	✓	✓
11-12	Project based on learning	✓	✓	✓	✓	✓

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA 233: Software Engineering (100 Marks)

Contact Hours: 4 Hours

Pre-requisite: Fundamentals of System Analysis and Design

Methodology & Pedagogy: While learning this course, students can not only understand concepts of software and software engineering but also get familiar with concepts of project management and generation of SRS. Students can also realize significance of entire software development processes with the help of modern tools and techniques used in modeling a software project.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Theory Hours
1	Introduction to software and Software Engineering	07
2	Software Process Models	09
3	Managing Software Projects	08
4	Software Requirement analysis and specification	08
5	Software Maintenance and Risk Management	08
6	Modern methods in Software Engineering	08

Total Hours (Theory): 48

Total Hours:48

Detail Syllabus:

Unit I: Introduction to software and Software Engineering

Hours 07

Definition of Software, Types of Software, Nature of Software, Software Applications, Definition of Software Engineering, Software Engineering-A Layered Technology, A process framework.

Unit II: Software Process Models

Hours 09

Definition of Software Process, Software Process Model - The Waterfall model, Incremental Process Models: The Incremental model, The RAD model Evolutionary Process models: Prototyping, The Spiral model, The Concurrent Development model, A final comment on evolutionary Processes, Component based development, Concept of Product and Process.

Unit III: Managing Software Projects

Hours 08

The Management Spectrum, W5HH principles, Concepts of measures, metrics and indicators. Process Metrics and Project Metrics: An overview, Software Measurements: Size oriented and function oriented metrics.

Unit IV: Software Requirement analysis and specification

Hours 08

Introduction to system and software requirements, types of software requirements: Functional and non-functional requirements. Requirement Specification (SRS), Requirement Analysis and Requirement Elicitation, Requirement Engineering.

Unit V: Software Maintenance and Risk Management

Hours 08

Software risks, risk identification, risk projection, risk mitigation, monitoring and management. Introduction to software maintenance, types of maintenance. Concept of software reengineering, Business Process Reengineering(BPR), BPR life cycle, reverse engineering, Applications of Software Engineering.

Unit VI: Modern methods in Software Engineering

Hours 08

Introduction to Agile development: What is Agility? principles and values of Agile development, concept of Extreme Programming, values of XP.

Core Books:

1. Roger S.Pressman, Software Engineering- A practitioner's Approach, McGraw-Hill International Editions
2. Grady Booch, James Rumbaugh, Ivar Jacobson: The Unified Modeling Language User
3. Rajib Mall, Fundamentals of software Engineering, Prentice Hall of India.

Reference Books:

1. Ian Sommerville, Software engineering, Pearson education Asia
2. Pankaj Jalote, Software Engineering – A Precise Approach Wiley
3. Merlin Dorfman (Editor), Richard H. Thayer (Editor), Software Engineering
4. Robert C. "Uncle Bob" Martin, Clean Architecture: A Craftsman's Guide to Software Structure and Design
5. Deepak Gaikwad, Viral Thakkar, DevOps Tools from Practitioner's ViewPoint, Wiley

Web References:

1. https://en.wikibooks.org/wiki/Introduction_to_Software_Engineering/Process/Methodology [Introduction to Software Engineering/Process/Methodology]

3. <https://nptel.ac.in/courses/106/101/106101061/> [Agile Software Development and Extreme Programming and Overview of DevOps]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Able to understand concept of Software and its types.
CO2 :	Get familiarize with software processes and related models.
CO3 :	Able to analyze requirements and manage project
CO4 :	Able to understand concepts of creating Software Requirement Specification
CO5 :	Able to understand risk management, software maintenance and modern Software engineering methods.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction to software and Software Engineering	✓				
2	Software Process Models		✓			
3	Managing Software Projects			✓		
4	Software Requirement analysis and specification				✓	
5	Software Maintenance and Risk Management					✓
6	Modern methods in Software Engineering					✓

Course Articulation Matrix:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA234: Advanced Database System (100 Marks)

Contact Hours: 03

Pre-requisite: Database Fundamentals.

Methodology & Pedagogy: During the practical session student will learn how to create table and perform operation on data and table using different oracle objects. Through procedure and function students can understand the concept of reusability. Student will learn how to handle error using exception and using trigger they can understand how to restrict the operation at particular time or given condition.

Outline of the course:

Week No	Practical	Description
1 - 2	Introduction to PL/SQL:	Basic syntax of PL/SQL Block, Declaration of variable and constants, SELECT INTO
3 - 4	Procedural statements:	Usage of Conditional statements and Looping structure inside the block
5 - 6	Implicit Cursor, Explicit Cursor, Parameterized Cursor:	Usage of cursor and working
7 - 8	Objects of the database: User defined Function and Stored Procedure:	Creations and usage of sub programs
9 - 10	Error Handling using pre-defined exception and user-defined exception:	Runtime errors and handling those errors
11 - 12	Row level and Statement level Trigger, GRANT & REVOKE:	Syntax of trigger and its working, Assign privileges at different level

Total Hours (Practical): 36

Total Hours: 36

Core Books:

1. SQL, PL/SQL – The programming Language Oracle - by Ivan Bayross.
2. Teach Yourself Database Technologies - by Ivan Bayross

Reference Books:

1. Oracle 9i, PL/SQL Programming by Scoot Urban, Oracle Press
2. Practice book on SQL and PL/SQL by Anjali, Amisha, Roopal and Nirav publications

Web References:

1. <http://plsqli-tutorial.com/index.htm> [For PL/SQL]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Be familiar with PL/SQL programming
CO2 :	Be familiar with database objects
CO3 :	Be familiar with retrieval and manipulation of data
CO4 :	Learn the concept of exception handling
CO5 :	Controlling user security

Course Outcomes Mapping:

Week No.	Practical Title	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction to PL/SQL:	✓				
2	Procedural statements:		✓			
3	Implicit Cursor, Explicit Cursor, Parameterized Cursor:			✓		
4	Objects of the database: User defined Function and Stored Procedure:		✓			
5	Error Handling using pre-defined exception and user-defined exception:				✓	
6	Row level and Statement level Trigger, GRANT & REVOKE:					✓

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	3	3	3	3	3	3	3	-	-	-	-	-	3	2
CO5	3	3	3	3	3	3	3	-	-	-	-	-	3	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA235: Open Source Technology (200 Marks)

Contact Hours: 07

Pre-requisite: Working knowledge of HTML and basic knowledge of MYSQL

Methodology & Pedagogy: During theory and practical sessions, students able to install & configure PHP and prerequisite software(s). Also, student will be emphasized to develop dynamic web applications.

Outline of the course:

Unit Number	Title of the Unit	Minimum Number of Hours	
		Theory	Practical
1	Introduction to Open Source and Web	08	36
2	PHP Configuration and Basics	07	
3	Array and Functions in PHP	08	
4	Handling Form Data	08	
5	PHP utilities	09	
6	Database Connectivity with MYSQL	08	

Total Hours (Theory): 48

Total Hours (Lab): 36

Total Hours:84

Detail Syllabus:

Unit I: Introduction to Open Source and Web

Hours 08

Introduction of open source software, Development philosophy of open source software, pros and cons of open source software, open source vs. close source software, Community support in open source, Version Control, Introduction to Webpage and Website, Static and Dynamic Website, Client & Server Side Scripting, Web Hosting: Shared / Cloud / VPS / Dedicated

Unit II: PHP Configuration and Basics

Hours 07

Introduction to PHP, Installation of Apache, MySQL and PHP (OOP approach), How PHP code is parsed, Embedding PHP and HTML, Executing PHP and viewing in Browser, Data types, Operators, PHP variables: static and global variables, Comments in PHP, Conditional Structure, Looping Structure.

Unit III: Array and Functions in PHP

Hours 08

Types of Array, Array Functions, Miscellaneous Functions: define, constant, include, require, header, die, exit, Overview of built in functions of PHP: Date and Time, Math functions, File handling functions, String functions, User Defined Functions.

Unit IV: Handling Form Data

Hours 08

HTML Form element & its attributes, Send Form data using GET Method & POST Method, Receive Form data using \$_GET, \$_POST & \$_REQUEST variables, PHP form validations

Unit V: PHP utilities

Hours 09

File Uploading: Upload Single and Multiple file using PHP script, Understanding HTTP requests, Exploring and modifying HTTP responses, getting information from web server, Sending mails

Unit VI: Database Connectivity with MYSQL

Hours 08

OOPs Concepts, PHP Data Objects (PDO), CRUD operations, Handling Errors, State Management Techniques: Concept of Session, starting session, modifying session variables, Un registering and deleting session variable, Concept of Cookies

Core Books:

1. Vikram Vaswani, PHP: A Beginner's Guide: Indian Edition, First Edition, McGraw Hill, 2009
2. Matt Doyle , Beginning PHP 5.3 , Wrox , 2010

Reference Books:

1. Timothy Boronczyk , Elizabeth Naramore, Jason Gerner, Yann Le Scouarnec, Jeremy Stolz, Michael K. Glass): Beginning PHP6, Apache, MySQL Web Development : Wrox , 2009.
2. Lynn Beighley and Michael Morrison, Head First PHP & MySQL, First Edition, O'Reilly Publication, 2009

Web References:

1. <https://github.com/PHPMailer/PHPMailer> [PHPMailer Code]
2. <https://www.php.net/> [Official website of PHP]
3. <https://www.geeksforgeeks.org/php-tutorials/> [Lecture notes of PHP]
4. <https://www.w3schools.com/php/default.asp> [Lecture notes of PHP]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Gain the skills and knowledge for Open Source and Web Hosting.
CO2 :	To utilize knowledge and skills for basics of PHP and configuration of MYSQL Server.
CO3 :	Learn the array and built-In functions in PHP.
CO4 :	Gain understanding of Form handing and utilities in PHP.
CO5 :	Be able to develop dynamic web based application using PHP and MySQL with state management techniques.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction to Open Source and Web	✓				
2	PHP Configuration and Basics		✓			
3	Array and Functions in PHP			✓		
4	Handling Form Data				✓	
5	PHP utilities				✓	
6	Database Connectivity with MYSQL					✓

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

CA236: Computer Network (100 Marks)

Contact Hours: 04

Pre-requisite: Basic knowledge of computer and its working.

Methodology & Pedagogy: During the lecture sessions, the students will learn about role of computer network in modern communication systems, underlying principles of network communication, need for standardization through network reference model. The teacher will also discuss communication issues at different layers and concepts related to network security.

Outline of the course:

Unit No.	Title of the Unit	Minimum Number of Theory Hours
1	Introduction to computer network	07
2	Basics of network communication	08
3	Network reference model	10
4	Design issues in data link layer	08
5	Design issues in network layer	08
6	Network security	07

Total Hours (Theory): 48

Total Hours: 48

Detail Syllabus:

Unit I: Introduction to computer network

Hours 07

Definition of computer network, aim and objective of computer network: applications of computer network, merits & demerits of computer network, examples of computer network, components of computer network, types of networks, network topologies, network devices: hub, switch, repeater, router, gateway, bridge.

Unit II: Basics of network communication

Hours 08

Parallel & serial communication, synchronous & asynchronous communication, modes of communication: simple, half-duplex, full-duplex, multiplexing, de-multiplexing: frequency division multiplexing (FDM), time division multiplexing (TDM), communication media: guided media, unguided media, switching techniques: circuit switching, message switching, packet switching.

Unit III: Network reference model

Hours 10

Need for network reference model, history of TCP/IP and OSI model, layers of OSI and TCP/IP model, comparison between TCP/IP and OSI model, Protocol Hierarchy, Network Protocols: Simple Mail Transfer Protocol (SMTP), File Transfer Protocol (FTP), Multiple Internet Mail Extension (MIME), Post Office Protocol (POP), Telnet, Domain Name Service (DNS), Dynamic Host Configuration Protocol (DHCP), Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (RARP).

Unit IV: Design issues in data link layer

Hours 08

Services provided to the network layer, framing, error control (error detection and correction code), flow control, data link layer in the internet (Serial Line Internet Protocol, Point-to-Point Protocol).

Unit V: Design issues in network layer

Hours 08

Routing Algorithms, Congestion Control Policies, Concept of Internetworking.

Unit VI: Network security

Hours 07

Introduction to cryptography, symmetric key and public key encryption systems, digital signature and key management concepts, communication security.

Core Books:

1. Andrew S. Tanenbaum: Computer networks, 4th Edition, Pearson Publication: 2019.
2. Behrouz Forouzan: Data communications and networking, 4th Edition, McGraw Hill, 2018.
3. William Stallings: Data and computer communication: 5th Edition, Pearson Publication, 2019.

Reference Books:

1. James F. Kurose, Keith W. Ross: Computer networking – A top down approach: 3rd Edition: Pearson Publication: 2017
2. Narsimha Karumanchi: Elements of computer networking: An Integrated Approach: 1st Edition: Careermonk Publication: 2014
3. Ed Tittel: Computer networking: 1st Edition, Schum's Publication: 2020

3. <https://www.plixer.com/blog/network-layers-explained/> [Network reference layers]

Course Outcomes: Upon successful completion of the course, students will be,

CO1 :	Student will be able to understand role of computer network in digital communication
CO2 :	Student will grasp underlying concepts related with network communication.
CO3 :	Student will understand role of reference models in standardizing communication
CO4 :	Students will learn about intra and inter network communication and technology behind it.
CO5 :	Students will learn about different aspects of network security.

Course Outcomes Mapping:

Unit No.	Unit Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Introduction to computer network	✓				
2	Basics of network communication		✓			
3	Network reference model			✓

HSIII.02 C: HUMAN VALUES & PROFESSIONAL ETHICS (100 Marks)

Contact Hours: 03

Pre-requisite courses: Ethical Leadership through Giving Voice to Values

(<https://www.coursera.org/learn/uva-darden-giving-voice-to-values?skipBrowseRedirect=true>)

Outline of the Course:

Unit. No.	Title of the unit	Minimum number of hours
1.	Introduction to Values and Ethics	05
2.	Elements and Principles of Values	08
3.	Applied Ethics	08
4.	Value, Ethics & Global Issues	05
5.	Contemporary Issues in Values and Ethics	04

Total Hours (Practical): 30

Total Hours: 30

Detailed Syllabus:

Unit – I	Introduction to Values and Ethics Need, Relevance and Significance of Values General, Concept and Meaning of Values and Ethics	Hours: 05
Unit – II	Elements and Principles of Values Universal & Personal Values, Social, Civic & Democratic Value	Hours: 08
Unit – III	Applied Ethics Universal Code of Ethics, Professional Ethics, Organizational Ethics, Ethical Leadership, Domain Specific Ethics	Hours: 08
Unit – IV	Value, Ethics & Global Issues Cross-Cultural Issues, Role of Ethics & Values in Sustainability	Hours: 05
Unit – V	Contemporary Issues in Values and Ethics Case Studies, Presentations, Projects	Hours: 04

Course Outcome (COs): At the end of the course, the students will be able to

CO1	Understand the concepts and mechanics of values and ethics.
CO2	Understand the significance of value and ethical inputs in and get motivated to apply them in their life and profession.
CO3	Understand the significance of value and ethical inputs in and get motivated to apply them in social, global and civic issues.
CO4	Develop their responsibility towards society.
CO5	Comprehend their own core values and adhere to those values at their workplace.
CO6	Practice Ethical Leadership.
