Faculty of Management Studies
Master of Business Administration
Batch: 2023-25

**Accredited with Grade A+ by
NAAC, GoI**

**CHAROTAR UNIVERSITY
OF SCIENCE &
TECHNOLOGY -
CHARUSAT**

Education Campus – Changa, (ECC), hitherto a conglomerate of institutes of professional education in Engineering, Pharmacy, Computer Applications, Management, Applied Sciences, Physiotherapy and Nursing, is one of the choicest destinations by students. Government of Gujarat has transformed it into Charotar University of Science and Technology (CHARUSAT) through an Act. CHARUSAT is permitted to grant degrees under Section-22 of UGC- Govt. of India.

The journey of CHARUSAT started in the year 2000, with only 240 Students, 4 Programmes, one Institute and an investment of about Rs. 3 Crores (INR 30 million). At present there are seven different institutes falling under ambit of six different faculties. The programmes offered by these faculties range from undergraduate (UG) to Ph.D degrees including M.Phil. These faculties, in all offer 70+ different programmes. A quick glimpse in as under:

Faculty	Institute	Programmes Offered
Faculty of Technology & Engineering	• Chandubhai S. Patel Institute of Technology • Devang Patel Institute of Advance Technology and Research	B.Tech M.Tech Ph.D
Faculty of Pharmacy	Ramanbhai Patel College of Pharmacy	B.Pharm M.Pharm Ph.D PGDCT / PGDPT
Faculty of Management Studies	Indukaka Ipcowala Institute of Management	BBA (Gen, BA, ENVM) M.B.A Ph.D
Faculty of Computer Applications	Smt. Chandaben Mohanbhai Patel Institute of Computer Applications.	BCA M.C.A / MCA (Lateral) M.Sc IT Ph.D

Faculty of Applied Sciences	P.D. Patel Institute of Applied Sciences	B.Sc M.Sc Ph.D
Faculty of Medical Sciences	- Ashok and Rita Institute of Physiotherapy - Manikaka Topawala Institute of Nursing - Charotar Institute of Paramedical Sciences	B.PT M.PT B.Sc (Nursing) M.Sc PGDHA PGDML TGNM Ph.D
Faculty of Humanities		Short-term Courses Ph.D

The development and growth of the institutes have already led to an investment of over Rs.125 Crores (INR 1250 Million). The future outlay is planned with an estimate of Rs.250 Crores (INR 2500 Million).

The University is characterized by state-of-the-art infrastructural facilities, innovative teaching methods and highly learned faculty members. The University Campus sprawls over 105 acres of land and is Wi-Fi enabled. It is also recognized as the Greenest Campus of Gujarat.

CHARUSAT is privileged to have 360 core faculty members, educated and trained in IITs, IIMs and leading Indian Universities, and with long exposure to industry. It is also proud of its past students who are employed in prestigious national and multinational corporations.

From one college to the level of a forward-looking University, **CHARUSAT** has the vision of entering the club of premier Universities initially in the country and then globally. **High Moral Values like Honesty, Integrity and Transparency**, which has been the foundation of ECC, continues to anchor the functioning of **CHARUSAT**. Banking on the excellent infrastructure and highly qualified and competent faculty, the University is expected to be catapulted into top 20 Universities in the coming five years. In order to align with the global requirements, the University has collaborated with internationally reputed organizations like Pennsylvania State University – USA, University at Alabama at Birmingham – USA, Northwick Park Institute –UK, ISRO, BARC, etc.

CHARUSAT has designed curricula for all its programmes in line with the current international practices and emerging requirements. Industrial Visits, Study Tours, Expert

Lectures and Interactive IT enabled Teaching Practice form an integral part of the unique **CHARUSAT** pedagogy.

The programmes are credit-based and have continuous evaluation as an important feature. The pedagogy is student-centred, augurs well for self-learning and motivation for enquiry and research, and contains innumerable unique features like:

- Participatory and interactive discussion-based classes.
- Sessions by visiting faculty members drawn from leading academic institutions and industry.
- Regular weekly seminars.
- Distinguished lecture series.
- Practical, field-based projects and assignments.
- Summer training in leading organizations under faculty supervision in relevant programmes.
- Industrial tours and visits.
- Extensive use of technology for learning.
- Final Placement through campus interviews.

Exploration in the field of knowledge through research and development and comprehensive industrial linkages will be a hallmark of the University, which will mould the students for global assignments through technology-based knowledge and critical skills.

The evaluation of the student is based on grading system. A student has to pursue his/her programme with diligence for scoring a good Cumulative Grade Point Average (CGPA) and for succeeding in the chosen profession and life.

CHARUSAT welcomes you for a Bright Future

CHARUSAT

FACULTY OF MANAGEMENT STUDIES ACADEMIC REGULATIONS

Master of Business Administration (MBA)

To ensure uniform system of education, duration of undergraduate and post graduate programmes, eligibility criteria for and mode of admission, credit load requirement and its distribution between course and system of examination and other related aspects, following academic rules and regulations are recommended.

1. *System of Education*

The Semester system of education should be followed across The Charotar University of Science and Technology (CHARUSAT) both at Undergraduate and at Master's levels. Each semester will be at least 90 working day duration. Every enrolled student will be required to take a specified load of course work in the chosen subject of specialization and complete a project/dissertation if any.

2. *Duration of Programme*

2.1 The Master of Business Administration (MBA) programme of Charotar University of Science and Technology (CHARUSAT) is a **two-year full-time** post-graduate programme, leading to the award of the degree of Master of Business Administration (MBA).

2.2 The span period of the programme is three / four years (as decided by the university from time to time) from the date of registration in the programme.

3. *Eligibility and mode of admissions*

Any graduate who is eligible for admission to the MBA programme will be admitted to the programme according to the regulations for admission decided by Government of Gujarat from time to time.

4. *Programme Structure and Credits*

A student admitted to a program should study the course and earn credits specified in the course structure. The details of programme structure, credit requirements, areas of specialisation proposed to be offered, etc. are presented at Appendix – I.

5. Attendance

5.1 All activities prescribed under these regulations and listed by the course faculty members in their respective course outlines are compulsory for all students pursuing the courses. No exemption will be given to any student from attendance except because of serious personal illness or accident or family calamity that may genuinely prevent a student from attending a particular session or a few sessions. However, such unexpected absence from classes and other activities will require to be condoned by the Dean/Principal.

5.2 Student attendance in every course should be 80%.

6 Course Evaluation

6.1 The performance of every student in each course will be evaluated as follows:

6.1.1 Internal evaluation by the course faculty member(s) based on continuous assessment, for 30% of the marks for the course; and

6.1.2 Final examination by the University through written paper or practical test or oral test or presentation by the student or a combination of these, for 70% of the marks for the course.

6.2 University Examination

6.2.1 The final examination by the University for 70% of the evaluation for the course will be through written paper or practical test or oral test or presentation or a combination of these.

6.2.2 In order to earn the credit in a course, a student has to obtain a grade other than FF.

6.3 Performance at Internal Evaluation Components & University Examination

6.3.1 A student who secures at least 40% marks in the University examinations in any course and at least 50% marks in the internal evaluation components and University examination put together will be declared to have passed that course, as shown in the following table:

Minimum percentage marks in University Exam for pass in any course	Minimum total percentage marks (i.e. Internal+ University) for pass in any course
40%	50%

6.3.2 If a student secures minimum passing marks of 40% in the University examinations in any course but fails to obtain the minimum passing total percentage of 50%, he/she has to repeat the university examination in the course.

7 Grading

7.1 The total of the internal evaluation marks and final University examination marks in each course will be converted to a letter grade on a ten-point scale as per the following scheme:

Grading Scheme:

Letter Grade	AA	AB	BB	B C	C C	C D	D D	FF
Grade Point	10	9	8	7	6	5	4	0
Range of Marks	≥80	≥75 <80	≥70 <75	≥65 <70	≥60 <65	≥55 <60	≥50 <55	<50

7.2 The Semester Grade Point Average (SGPA) will assess the student's performance in any semester. Similarly, the Cumulative Grade Point Average (CGPA) will denote his performance at the end of two or more consecutive semesters. The SGPA and CGPA are calculated as follows:

$$(i) \text{ SGPA} = \frac{\sum C_i G_i}{\sum C_i} \quad \text{where } C_i \text{ is the number of credits of course } i$$

G_i is the Grade Point for the course i

and $i = 1$ to n , n = number of courses in the semester

$$(ii) \text{ CGPA} = \frac{\sum C_i G_i}{\sum C_i} \quad \text{where } C_i \text{ is the number of credits of course } i$$

G_i is the Grade Point for the course i

In addition, $i = 1$ to n , n = number of courses of all semesters up to which CGPA is computed.

(iii) No student will be allowed to move to the second academic year if his/her CGPA is less than 3 at the end of the first academic year.

(iv) In addition to above, a student has to comply with the requirements of the regulatory bodies, wherever such requirements exist.

(v) A student will have a maximum of four chances* after first appearing in that examination to clear that course, subject to the restriction on the span period stipulated in clause 2.2 above.

(*Whenever the university conducts the examinations of that course, it will be considered as a chance, irrespective of whether the student appears for the

examination or not.)

8. Awards of Degree

8.1 Every student of the programme who fulfils the following criteria will be eligible for the award of the degree:

8.1.1 He/ She should have earned at least minimum required credits as prescribed in course structure.

9. Award of Class

The class awarded to a student in the programme is decided by the final CGPA as per the following scheme:

Distinction: CGPA $\geq$ 7.5

First class: CGPA $\geq$ 6.0

Second Class: CGPA $\geq$ 5.0

10. Transcript

The transcript issued to the student at the time of leaving the University will contain a consolidated record of all the courses taken, credits earned, grades obtained, SGPA, CGPA and class obtained.

Appendix – I

Details of MBA Programme Structure, Credit Requirements and Specialisation

A1. Programme Structure

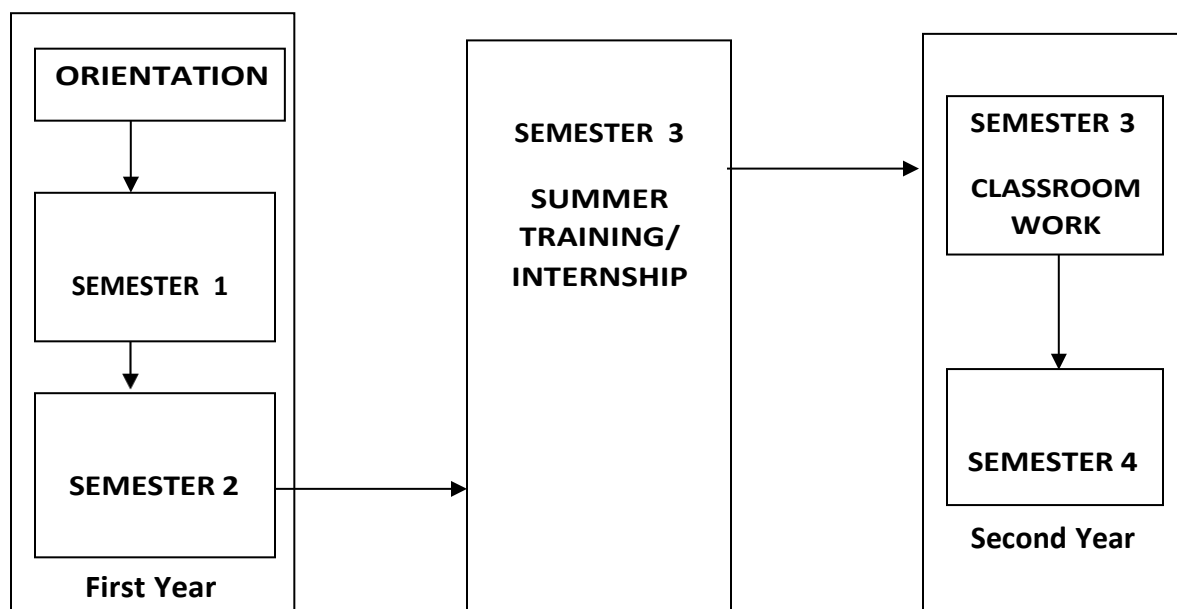

A1.1 The programme is structured into **four semesters**, consisting of classroom contact-based work and **a summer training / internship programme**.

A1.2 Each semester will be for a minimum of **90 working days** for classroom work, covering classroom contact sessions, laboratory/tutorial/library/group work, case discussions and presentation, field-based as well as library/internet search-based assignments and projects, classroom exercises, management and simulation games, short quizzes, and class tests. The duration for any organisational attachment/training during the semester and final University examinations will be in addition to the 90 working days.

A1.3 The summer training / internship programme will be for a minimum duration of 45 days / 6-8 weeks and will commence at the end of the second semester classroom work.

A1.4 The structure of the MBA programme is as shown in the following figure:

Figure A1: MBA Programme Structure

A2. Credits

A2.1 Any student of the MBA programme who earns 100 credits by pursuing the prescribed course work and passing all tests, examinations, assignments, laboratory work, projects and all other evaluation components as per the passing standards of the University will be eligible for the award of the Master of Business Administration (MBA) degree.

A2.2 A credit for the MBA programme will mean fifteen (15) classroom contact sessions of sixty (60) minutes each.

A2.3 The current distribution of credits over the two-year period for classroom contact sessions and laboratory/ tutorial/ library/ group work sessions will be as follows:

Table A2: Semester-wise Distribution of Credits

Sl. No.	Semester	Number of Credits
1	Semester - 1	23
2	Semester - 2	20
3	Semester 3 - Summer Training/ Internship	06
4	Semester - 3 - Classroom Work	24
5	Semester - 4	27
Total		100

A2.4 A course will be of three or more credits as shown in the detailed list of courses for the programme.

A2.5 All courses shown in the list of courses are compulsory for all MBA students. However, students will have the option of pursuing a total of eight elective courses of four credits each, out of ten courses offered during third and fourth semesters and one comprehensive project of six credits during the fourth semester.

A2.6 Some courses will have only classroom contact sessions and some others will have tutorial/ laboratory/ library/ group work sessions, as shown in the list of courses.

A2.7 The University has implemented Choice Based Credit System (CBCS), with effect from 2016-17, which provides a 'cafeteria' approach; wherein the students can take courses of their choice, and adopt an interdisciplinary approach to learning from the pull of courses offered by all the Faculties/ Institutes/ Departments across university.

Below mentioned pull of courses will be offered to the students by different departments/institutes. Each student has to choose one course (of his /her choice) from the offered courses.

Semester 2

Sr. No.	Course Code & Course Name	Department / Faculty offering the Course
1	EE782.01: Energy Auditing	EE/CSPIT
2	CE771.01: Project Management	CE/CSPIT
3	IT771.01: Cyber Security & Laws	IT/CSPIT
4	CA842: Mobile Application Development	CMPICA
5	PT796.01: Fitness and Nutrition	ARIP
6	NR 752.01: Epidemiology & Community	MTIN
7	OC733.01: Introduction to Polymer Science	PDPIAS
8	MB651: Software based Statistical Analysis	I2IM

9	MA772.01: Design of Experiments	PDPIAS
10	PH892: Intellectual Property Rights	RPCP
11	PD262: Astrophysics, Space and Cosmos-2	PDPIAS

A3. Specialisation / Concentration

A3.1 The Institute will offer courses of specialisation in the following functional / sectoral areas /streams of management:

Table A3: Areas/Streams of Specialisation/ Concentration

Functional Areas of Management
• Marketing Management • Financial Management • Human Resource Management • Business Analytics

The Institute will endeavour to offer specialisation in as many areas/streams as possible from the above list. However, the Institute will offer any specific area / stream of specialisation / course during any year only if about twenty-five percentages of the students opt for it and if the faculty resources are available.

A3.2 Any student can claim to have specialised in a particular area/ stream if he has successfully completed

- (i) At least eight courses (amounting to a minimum of twenty four credits) in the area/ stream by taking electives offered in the area/ stream during the third and fourth semesters of the programme, and
- (ii) A comprehensive project of six credits in the area/stream.

A3.3 Each student has to opt for specialisation in only one functional area of management for the award of MBA degree.

A3.4 A student may specialise in only one functional / sectoral areas / streams of management by taking eight courses in each of the areas and carrying out a comprehensive project in each of the areas.

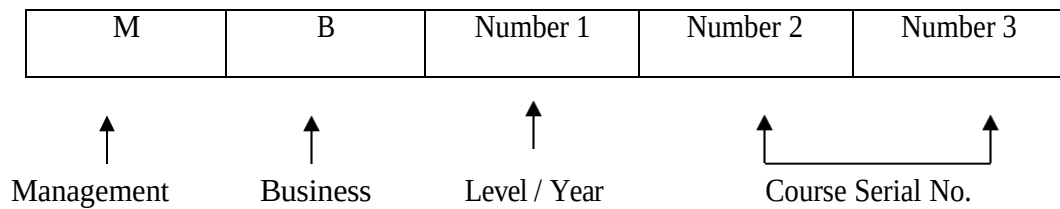

A3.5 However, no student will be allowed to specialise in more than one functional stream of management.

A4. Courses, Curricula and Revision

A4.1 The Faculty Board of the Faculty of Management Studies and the Dean of the Faculty of Management Studies will keep the curricula current and in tune with the changes happening in the world of management and make it relevant to the needs of different organs of society.

A4.2 The review of the programme, its structure, the course curricula, pedagogy and evaluation will be undertaken by the individual Boards of Studies at least once in every two years.

A4.3 Every course of the programme will be designated by a five-digit alphanumerical code as per the following scheme:

TEACHING & EXAMINATION SCHEME FOR MBA

Course Code	Course Title	Total Number of Credits	Course Type	Remarks
<u>Semester – I</u>				
MB101	Managerial Economics	3	Theory	
MB102	Business Analytics	3	Theory

Course 4 Name	Customer Relationship Management	Personal Finance and Wealth Management	Organization Development	Optimization Analytics	Marketing Analytics	Financial Analytics	Occupational Testing	Data Mining And Business Intelligence

Note:

1. Procedure for Selection of Streams / Area / Group and Courses

Step: 1 – Selection of Stream (Only One for the Programme)

A student must choose any one stream of specialization out of the offering. The stream so chosen by the student will remain same for Semester – III and IV. This will be the area of specialization. Under no circumstances, the stream / area of specialization can be changed.

Step: 2 – Choice of Courses in Semester - III

From the stream so chosen (as mentioned in Step: 1), the student has to choose any 03 (three) courses out of 04 (four) options available. The total credit that can be obtained in Semester-III for specialization courses will 4 courses x 3 credits = 12 Credits. In addition students will undergo a Summer Internship Programme with Four (06) credits.

Step: 3 – Choice of Courses in Semester – IV

A Student has to repeat Step: 2 in Semester – IV and will have to choose 03 (three) more courses out of 04 (four) in the same stream / area of specialization that he / she has selected during the start of Semester – III. The total credit that can be obtained in Semester-IV for specialization courses except Comprehensive Project will be 4 courses x 3 credits = 12 Credits.

Step: 4 – Comprehensive Project

During Semester – IV, a student must undertake his / her Comprehensive Project in the same stream / area that he / she had chosen during the start of the Semester – III. However, research / project of interdisciplinary nature can be undertaken with the permission of the concerned guide and head of the institute / principal. The total credit that can be obtained in Semester-IV for specialization through Comprehensive Project is Six (06) credits.

Step: 5 – Total Number of Credits for Specialization

The total credits for specialization will be 24 i.e. (8*3) for courses and 06 credits for Comprehensive Project. Hence, the specialization will be of 30 credits.

2. Rules for offering Elective Stream / Courses

- Minimum 25% of students must have opted for a particular course.
- Based on availability of faculty.

Master of Business Administration (MBA) Programme

SYLLABI (Semester – III)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

MB301: STRATEGIC MANAGEMENT
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
03	Theory	03	45

Rationale

New age organizations do not limit strategic management to the top level management. Middle-level managers also have a crucial role in organizational decision-making. The participants of this course intent to join the work force as middle level managers. The course will help participants develop expertise in Analyzing a firm's external and internal environment. To identify and create competitive advantage as well as to formulate, implement and evaluate cross-functional decisions. At the end of this program, the participants should understand what allows certain organizations to make profits while others fail to do so.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Strategic Management	05
2	Strategy Formulation	10
3	Strategy Implementation & Innovation	10
4	Strategic Leadership	10
5	Strategy Evaluation	05
6	Capstone Project Presentations	05
Total Contact Hours		45

Course Syllabus

Module 1: Strategic Management

05 hours

What is Strategy? Introduction to Strategic Management - Firm Performance, Vision, Mission, and Strategic Intent, External Environment Analysis, Internal Environment Analysis, Sustained Competitive Advantage, Competition Evaluation & Competitive Positioning.

MB311: INTEGRATED MARKETING COMMUNICATIONS
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

In today's scenario, innumerable marketing mediums exist for entrepreneurs and organizations to pick from. Simultaneously, there are several marketing campaigns taking place for a single product/service of a brand. As such, it becomes difficult for a brand to maintain consistent messaging and uniform marketing communication throughout the organization. This is where integrated marketing communication comes in. This curriculum course structure is developed such that the student can develop and design an effective marketing campaign in order to give an organization an edge over competitors, boosts sales and consistent communication leading to a lifelong, loyal client base.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Integrated Marketing Communication	10
2	Integrated Marketing Program and Situational Analysis	05
3	Analysing the Communication Process	05
4	Objectives and Budgeting for IMC Programs	05
5	Developing Integrated Marketing Communication Program	20
6	Monitoring, Evaluation, and Control	10
7	Contemporary Issues and Project presentations	10
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Integrated Marketing Communication

10 hours

Promotional Mix, IMC role in marketing process, IMC Planning Process

Module 2: Integrated Marketing Program and Situational Analysis

05 hours

Define situational analysis, Highlight various ad agencies, Explain the role played by agencies, Understanding the IMC from the lens of buyer, Designing Buyer Persona

Module 3: Analysing the Communication Process

05 hours

Discussion based on Culture, Communication process, Designing Messages

Module 4: Objectives and Budgeting for IMC Programs

05 hours

SMART objectives, Factors influencing budget, Theoretical approach to budgeting, Method to determine marcom budget

Module 5: Developing Integrated Marketing Communication Program

20 hours

Formulating the objectives, Decision making process-Budgeting, Understanding various budget formats, Content writing.

Module 6: Monitoring, Evaluation, and Control

10 hours

Measuring the Effectiveness of the Promotional Program, Regulation of Advertising and Promotion

Module 7: Contemporary Issues and Project presentations

10 hours

Ethics in Advertising, Laws Related to Deceptive Advertising, Impact of Globalization on Advertising, Relevance and usage of Puffery in Advertisements.

**MB312: SALES AND DISTRIBUTION MANAGEMENT
YEAR 2, SEMESTER – III**

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Since sales are the only way for a business to make money, figuring out how to make a profit is a top priority; this course emphasizes how to make or enhance profit through cost analysis, sales forecasting, and other methods. It will also go over marketing strategies tailored to individual salespeople, as well as how to manage a sales team and keep their efforts under control. Learners will gain a lot from these, and they will be able to put what they learn to use in their future careers. This course also takes a somewhat different tack in explaining distribution management, which is widely recognized as one of the most critical areas of study for business students. Without an effective distribution system, an organization risks losing sales and customers and, ultimately, profits. In acknowledgment of the relevance of system expertise, software application for Sales and Distribution has been incorporated.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

MB320: FINANCIAL MODELING YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Financial modeling is a crucial instrument that makes possible to estimate business ideas and risks efficiently. It is a process of presenting a company's financial status in an effective manner. This curriculum course structure is developed such that students will acquire skills to critically assess the performance of the business and accordingly will help students to take the appropriate investment decisions. Decision Making is one of the vital skill which a manager come across while handling the routine tasks. Along with the decision making, a Manager is expected to have certain abilities which involves critical and logical way of thinking. This course Logical Analysis and Decision Making will accustom students to analyze day-to-day tasks and will develop students as managers with independent, self-directed thinking.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Financial Modelling and Excel	10
2	Time Value of Money Capital Budgeting	10
3	Financial Statement Modelling using Excel	10
4	Discounted Cash Flows & Valuation	10
5	Portfolio Theory Using Excel	10
6	Project Finance Modelling	10
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Financial Modelling and Excel

10 hours

Introduction to Financial Modelling, Restricting and validating data, Goal Seeking, Charting and Presenting Data, Types of Charts, Basic Excel Functions, Summarizing Data using Histograms, Lookup functions, Pivot Tables, Standard deviation, Correlations, Beta, Regression

Module 2: Time Value of Money Capital Budgeting

10 hours

Basics Time Value of Money Functions, PV, FV and PMT, Loan Amortization Schedule, Capital Budgeting in excel with solver, NPV and IRR, What if analysis, Sensitivity analysis and Scenario analysis Goal seek command using solver

Module 3: Financial Statement Modelling using Excel

10 hours

Entering Assumptions, Calculating Revenue, Calculating Expenses, Building Income Statement, Building Cash Flow Statement, Building Balance Sheet

Module 4: Discounted Cash Flows & Valuation

10 hours

Basics of Valuation, Valuation Methods, Introduction to Discounted Cash Flow Method, Weightage Average Cost of Capital, Finding Terminal Value

Module 5: Portfolio Theory Using Excel

10 hours

Determining Efficient Portfolio, Creating Dynamic, Insurance and Fixed Income Portfolio, Use of excel in Derivatives Contracts, Option Pricing using Black and schools model, Greeks in excel, Real options valuation.

Module 6: Project Finance Modelling

10 hours

Introduction to Project Financing, Risks- analysis and mitigation, financial model, inputs, sensitivity, and cost of capital, construction, borrowing and output, Preparing projected financial statements including cash flow, evaluating a projects debt capacity and cash flow, measuring expected rates of return

MB321: BEHAVIORAL FINANCE
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

We make thousands of decisions every day. Should I attend the college today or stay home and help my parents? Should I eat home cooked food for lunch or from my favorite food joint? Should I tip always when at a restaurant? Every day we make these kinds of decisions with almost no thought, using what psychologists call “heuristics” – rules of thumb that enable us to navigate our lives. Without these mental shortcuts, we would be paralyzed by the multitude of daily choices. But in few cases, these shortcuts lead to errors which could be rather predictable, that is, if we know what to watch out for. For example, we are naturally biased towards selling investments that are doing well for us, but holding on to those that are doing poorly? Or we generally end up buying insurance that we do not even need?

In this course of Behavioral Finance, a wide range of decision-making biases and information processing errors that influence our financial decision making will be discussed. Some of these are self-deception biases, cognitive biases, and emotional biases. The course will also discuss the causes and potential measures to improve financial standing of individuals along with concepts of loss aversion and the herding bias. Decision Making is one of the vital skill which a manager come across while handling the routine tasks. Along with the decision making, a Manager is expected to have certain abilities which involves critical and logical way of thinking. This course Logical Analysis and Decision Making will accustom students to analyze day-to-day tasks and will develop students as managers with independent, self-directed thinking.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students’ prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

MB322: SECURITY ANALYSIS AND INVESTMENT MANAGEMENT
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

To deal with several investment options available in today's dynamic financial and economic environment and to make the optimum utilization of monetary resources of an organization it becomes imperative to have an understanding of financial markets and risk-return relationship. The course aids a finance professional to value the securities and use different tools of analysis to decide up on the timing of investment and the type of financial instrument to be selected for investing surplus funds. It gives an understanding of how derivatives work as a tool for hedging as well as equipping the professionals to be aware of several portfolio management strategies.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Financial Markets	08
2	Risk and Return	09
3	Major Indices and Securities Valuation	10
4	Security Analysis	11
5	Portfolio Concepts and Evaluation	10
6	Derivatives	12
Total Contact Hours		60

Course Syllabus

Module 1: Financial Market

08 hours

Money Market, Debt Market, Government Securities Market, Foreign Exchange Market, Capital Market, Derivatives Market, Commodities Market.

Module 2: Risk and Return

09 hours

Concept of Risk and Return, Systematic and Unsystematic Risk, Multi-factor model of risk and return, Efficient capital markets, Concept of Beta, Capital Asset Pricing Model.

Module 3: Major Indices and Securities Valuation

10 hours

Various Indices, Construction of Indices, Equity Share Valuation, Preference Share Valuation, Bond Valuation.

YEAR 2, SEMESTER – III**

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course introduces the student to the discipline of Organizational Development (OD) with an overview to create interpersonal, group, intergroup, or organization-wide change.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Organization Development	05
2	Foundation of Organization Development	10
3	OD Consultant	10
4	Leading and Managing Change	10
5	Human Interventions - Type	10
6	Issues in Consultant – Client Relations	10
7	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Organization Development

05 hours

Field of OD, History and Definitions of OD, Values, Assumptions and Beliefs of OD, Characteristics of OD

Module 2: Foundation of Organization Development

08 hours

System theory, Action Research Model, Interventions, Characteristics and Classification of OD Intervention

Module 3: OD Consultant

12 hours

Internal Alignment: Determining the Structure, Defining Internal Alignment, Strategic Choices in Designing Internal Structures, Job Based Structures, Person Based Structures, External Competitiveness: Determining the Pay Level, Defining Competitiveness, Organisation Factors, Industry and Technology, Employer Size, People's Preference, Competitive Pay Policy Alternatives

Module 4: Leading and Managing Change

08 hours

Surveying Market and Compensation Practices, Designing a Base Pay structure

Module 5: Human Interventions - Type

12 hours

Pay for Performance Plans, Designing Pay for Performance, Performance Appraisals, Statutory Benefits Including Health Care, Employee Welfare, Retirement Benefits

Module 6: Issues in Consultant – Client Relations

12 hours

Corporate Directors, Executives, Scientists and Engineers in High Technology Industries, Contingent Workers, Contemporary Issues

Module 7: Contemporary Issues

12 hours

Corporate Directors, Executives, Scientists and Engineers in High Technology Industries, Contingent Workers, Contemporary Issues

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. George T. Milkovich, Jerry M. Newman, C. S. Venkata Ratnam, Compensation (SIE), Tata McGraw-Hill (Latest Edition).

Reference Books:

1. Richard I Henderson, Compensation Management in a Knowledge Based World, Tata McGraw-Hill (Latest Edition).
2. Deepak Kumar Bhattacharya, Compensation Management, Oxford Publication (Latest Edition).
3. Ajay Garg, Labour Laws

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Apply knowledge and skills of Compensation Management (CM)
CO2	Develop effective compensation strategy
CO3	Evaluate Effects of compensation strategy
CO4	Estimate The effects of pay level and pay structure

Course Outcomes Mapping

Module	Module Name	Course Outcomes			
		CO1	CO2	CO3	CO4
1	Introduction to Compensation Management	√			
2	Pay strategy: The Totality of Decisions	√			
3	Internal Alignment and External Competitiveness		√		
4	Designing Pay Levels, Mix and Pay structures			√	

5	Employee Contributions: Determining Individual Pay				√
6	Compensation Strategy for Special Groups and Contemporary Issues				√

Course Articulation Matrix

		PO1	PO2	PO3	PO4	PO5
		Analyze contemporary issues and apply management knowledge for resolution.	Practice effective communication and interpersonal skills.	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.	Demonstrate Attitude for continuous learning and development.	Ability to lead themselves and others in the achievement of organizational goals, contributing effectively to a team environment
CO1	Apply knowledge and skills of Compensation Management (CM)	3	2	3	3	3
CO2	Develop effective compensation strategy	3	3	3	2	3
CO3	Evaluate Effects of compensation strategy	3	3	2	3	3
CO4	Estimate The effects of pay level and pay structure	2	2	2	2	2

MB340: THE FUNDAMENTALS OF DATABASE SYSTEMS
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course will enable the students to gain sufficient knowledge and experience to database programming concepts. The course will help the students understand SQL queries and its Modules in various Datasets and implement them in real life.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	File Structure and Organization	10
2	Introduction to Databases	05
3	Data Models & Data Design	10
4	Introduction to Relational Model	15
5	Introduction to SQL	15
6	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: File Structure and Organization

10 hours

Data and information, Concept of field, key field; Records and its types, Fixed length records and variable length records, Files, operation on files, Primary file organization

Module 2: Introduction to Databases

05 hours

Database system, Purpose of database system, View of data, Relational databases, Database architecture

Module 3: Data Models & Data Design

05 hours

Basic building blocks, Business rules, The evolution, of data models, Degrees of data abstraction, The Entity – Relationship Model, ER Diagrams

Module 4: Introduction to Relational Model

15 hours

Structure of Relational Database, Database Schema, Relational Query Language, Relational Operations, grouping and ungrouping, relational comparison.

Module 5: Introduction to SQL

10 hours

Introduction to SQL & Overview, SQL Data Definition and Basic Structure, Basic Operations, Set Operations, Aggregate Functions, Nested Sub- queries, Modification of Database

Module 6: Contemporary Issues

15 hours

Contemporary issues in analytics that can be analyzed and solved using SQL Queries

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Silberschatz, Korth, Data base System Concepts, McGraw hill, Sixth Edition.

Reference Books:

1. Raghurama Krishnan and Johannes Gehrke, Data base Management Systems, TATA McGrawHill 3rd Edition.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	To Understand the basic concepts and the applications of database systems
CO2	To recognize the datasets, models in database design principles
CO3	To design ER relationship and diagrams into RDBMS and formulate SQL queries on the respect data
CO4	To Master the basics of SQL and construct queries using SQL.

Course Outcomes Mapping

Module	Module Name	Course Outcomes			
		CO1	CO2	CO3	CO4
1	File Structure and Organization	√			
2	Introduction to Databases		√		
3	Data Models & Data Design		√		
4	Introduction to Relational Model			√	
5	Introduction to SQL			√	√
6	Contemporary Issues			√	√

Course Articulation Matrix

		PO1	PO2	PO3	PO4	PO5
		<i>Analyze</i> contemporary issues and apply management knowledge for resolution.	<i>Practice</i> effective communication and interpersonal skills.	<i>Understand</i> Global Perspectives and exhibit Cross- Cultural sensitivity.	<i>Demonstrate</i> Attitude for continuous learning and development.	Ability to lead themselves and others in the achievement of organizational goals, contributing effectively to a team environment
CO1	To <i>Understand</i> the basic concepts and the applications of database systems	1	2	-	-	1
CO2	To <i>recognize</i> the relational database design principles	3	3	1	1	1

CO4	To <i>Master</i> the basics of SQL and construct queries using SQL.	3	3	1	1	1

MB341: BASIC PROGRAMMING USING PYTHON
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course will enable the students gain sufficient knowledge and experience to programming concepts. The course will help the students understand python environment, its modules and libraries.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to python programming	10
2	Control statements	05
3	Functions	05
4	Manipulating strings	15
5	Files and Exceptions	10
6	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to python programming

10 hours

Introduction, Variables and assignment statements, Arithmetic, print Function, Decision making, Intro to data science: Descriptive

Module 2: Control statements

05 hours

Introduction, if statement, if...else and if..elif...else statements, while statement, for statement, Augmented assignment, break and continue statements, Boolean operators and, or and not, Measures of central tendency, Intro to data science: Measures of central tendency

Module 3: Functions

05 hours

Introduction, Defining functions, Functions with multiple parameters, Random-number generation, math module function, Intro to data science: Measures of dispersion

Module 4: Manipulating strings

15 hours

Introduction, Formatting strings, Concatenating and repeating strings, Stripping whitespace from string, searching substring, Replacing strings, Splitting and joining strings, Intro to data science: Pandas and data munging

Module 5: Files and Exceptions

10 hours

Introduction, Files, Text-file processing, Updating text files, Handling exceptions, finally clause, Intro to data science: working with CSV files

Module 6: Contemporary y Issues

15 hours

Contemporary issues in analytics that can be analyzed and solved using Python

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Paul Deitel and Harvey Deitel, Python for Programmers, Pearson (Latest Edition).

Reference Books:

1. Bharti Motwani, Data Analytics using Python, Wiley (Latest Edition).

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Understand the foundation of programming
CO2	Learn the control structure in programming
CO3	Use the modules and libraries to develop program for problem solving
CO4	Understand the file handling operations in python

Course Outcomes Mapping

Module	Module Name	Course Outcomes			
		CO1	CO2	CO3	CO4
1	Introduction to python programming	√			
2	Control statements	√	√		
3	Functions		√	√

MB342: MULTIVARIATE DATA ANALYTICS
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Advanced analytics has evolved into a competitive strategy that drives innovation across several organizations. This course will introduce the students to advanced statistical methods and expose them to applications of the same for decision making. Decision Making is one of the vital skill which a manager come across while handling the routine tasks. Along with the decision making, a Manager is expected to have certain abilities which involves critical and logical way of thinking. This course Logical Analysis and Decision Making will accustom students to analyze day-to-day tasks and will develop students as managers with independent, self-directed thinking.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Correlation and Regression	10
2	Logistic Regression	05
3	Decision Trees	05
4	Forecasting Techniques	15
5	Clustering	10
6	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Correlation and Regression

10 hours

Introduction to correlation, Pearson correlation coefficient, Spurious correlation, Introduction to regression, Simple linear regression, Multiple linear regression

Module 2: Logistic Regression

05 hours

Introduction to logistic regression, Binary logistic regression, Interpretation of logistic regression parameters, Classification table, sensitivity, specificity, precision, and F-Score, Optimal cut- off probability, Introduction to multinomial logistic regression

Module 3: Decision Trees

05 hours

Introduction, Chi-square automatic interaction detection (CHAID), Classification and regression tree, Error matrix and AUC

Module 4: Forecasting Techniques

15 hours

Introduction, Time-series data and components of time- series data, Forecasting techniques and forecasting accuracy

Module 5: Clustering

10 hours

Introduction, Distance and similarity measures, Quality and optimal number of clusters, Clustering algorithms

Module 6: Contemporary Issues

15 hours

Contemporary Issues in advanced statistical analytics

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Boo

1. U. Dineshkumar, Business Analytics, (Latest Edition), Wiley.

Reference Books:

1. Doane, Seward, and Chowdhury, Applied Statistics in Business and Economics, (Latest k:Edition), McGraw Hill.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Learn the rationale behind the advanced statistical methods and its importance in decision making.
CO2	Apply the appropriate advance level statistical techniques for problem solving.
CO3	Analyze the data to make inference about the population characteristics.
CO4	Propose models that can be used for the purpose of prediction / forecasting.

Course Outcomes Mapping

Module	Module Name	Course Outcomes			
		CO1	CO2	CO3	CO4
1	Correlation and Regression	√		√	√

MB343: OPTIMIZATION ANALYTICS
YEAR 2, SEMESTER – III

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course will enable the students gain sufficient knowledge and experience to Optimization techniques concepts using Excel Solver. The course will help the students understand Optimization of various departments and their association with Excel tools and its modules. Decision Making is one of the vital skill which a manager come across while handling the routine tasks. Along with the decision making, a Manager is expected to have certain abilities which involves critical and logical way of thinking. This course Logical Analysis and Decision Making will accustom students to analyze day-to-day tasks and will develop students as managers with independent, self-directed thinking.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Optimization Models	10
2	Linear Programming	05
3	Advanced Programming Applications	05
4	Integer Programming	15
5	Network Models	10
6	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Optimization Models

10 hours

Introduction to mathematical programming and modeling, Identifying variables, constraints, and objective function, Sets, indexes, matrices, and common notation

Module 2: Linear Programming

05 hours

Graphical method for two variable, Optimization problem, Minimization versus maximization problems using Excel, Examples

Module 3: Advanced Programming Applications

05 hours

Use of Excel Solver software for solving linear optimization problems, Using graphical and simplex methods, Examples for transportation and assignment

Module 4: Integer Programming

15 hours

Formulating Integer Programs, Branch-and- Bound, Either – Or Constraint, Spatial Analysis : Location Models

Module 5: Network Models

10 hours

The Classic Transportation Model, Supply Chain Modeling, Shortest Path Model, Travelling Sales Man Problem

Module 6: Contemporary Issues

15 hours

Contemporary issues in Optimization analytics that can be analyzed and solved using Excel Solver

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Russell and Taylor, Operations Management, Pearson Education (Latest Edition).

Reference Books:

1. Manisha Nigam, Advanced Analytics with Excel 2019, BPB Publications.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Understand the foundation of Optimization programming.
CO2	Learn the mathematical modelling and their structure for effective optimization.
CO3	Use the models and tools to develop optimization program for problem solving
CO4	Understand the optimization and effective decision making for organization for operations and optimization.

Master of Business Administration (MBA) Programme

SYLLABI (Semester – IV)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

MB401: LOGISTICS AND SUPPLY CHAIN MANAGEMENT YEAR 2, SEMESTER – 4

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
03	Practical	03	45

Rationale

Logistics and Supply Chain Management course integrate business skills for a modern day operational career. The course will focus on exploring flow of information between suppliers, manufacturers, retailers and consumers, which will enable students to find ways, which can results in improved effectiveness and efficiency. Based on quantitative data and analytical techniques and application of latest logistics technology will enhance the operations and supply chain management.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Building Strategic Framework to Analyze Supply Chains	05
2	Designing the Supply Chain Network	05
3	Planning Demand and Supply in a Supply Chain	05
4	Planning and Managing Inventories in A Supply Chain	10
5	Sourcing, Transporting and Pricing Products	10
6	Recent and Contemporary Issues / Cases	10
Total Contact Hours		45

Course Syllabus

Module 1: Building Strategic Framework to Analyze Supply Chains

05 hours

Understanding Supply Chain Management, Supply Chain Performance, Achieving Strategic Fit and Scope, Supply Chain Drivers and Obstacles, MTS, MTO and CTO, Typology in Supply Chain.

Module 2: Designing the Supply Chain Network

05 hours

Designing the Distribution Network in a Supply Chain, Network Design in the Supply Chain, Factors Considered while selection of network design, Network Design in an Uncertain Environment.

Module 3: Planning Demand and Supply in a Supply Chain

05 hours

Demand Forecasting, Demand forecasting with seasonality, trends and levels, Aggregate Planning – Chase and Level Strategy.

Module 4: Planning and Managing Inventories in A Supply Chain

10 hours

Managing Economies of Scale: Cycle Inventory, Basic Economic Order Quantity(EOQ) Model, Managing Uncertainty: Safety Inventory, Inventory Management in Uncertain Lead Time and Uncertain Demand Scenarios.

Module 5: Sourcing, Transporting and Pricing Products

10 hours

Sourcing Decision in Supply Chain, Make or Buy Decision, Transportation, Use of Savings Algorithm to determine optimum routes of transportation, Modes of transportation with pros and cons., International Commercial Terms, Revenue Management Strategies, Spot and Advance Pricing.

Module 6: Recent and Contemporary Issues / Cases

10 hours

Contemporary issues associated to Logistics and Supply Chain Management

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Supply Chain Management: Strategy, Planning and Operation, Chopra, S. and Meindl, P, (Latest Edition), Pearson Education, ISBN-13: 978-0-13-274395-2

Reference Books:

1. Chain Management: Text and Cases Shah, J. (Latest Edition), Pearson Education, ISBN: 9789332548206 Operations & Supply chain Management Chase, B. TMH. ISBN: 9789339204105

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Understand the basic concepts, drivers, performance parameters and role of Logistics and supply chain management in business.
CO2	Understand the role of Facilities Planning along with Network design by considering the factors affecting the decision.
CO3	Apply various techniques of inventory management and their practical situations.
CO4	Evaluate , appraise and integrate the role of Transportation and Logistics in Supply Chain Management and the latest trends in logistics and supply chain management.

Course Outcomes Mapping

Module	Module Name	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
1	Building Strategic Framework to Analyze Supply Chains	✓				
2	Designing the Supply Chain Network		✓			
3	Planning Demand and Supply in a Supply Chain			✓		
4	Planning and Managing Inventories in A Supply Chain		✓		✓	
5	Sourcing, Transporting and Pricing Products				✓	
6	Recent and Contemporary Issues / Cases					✓

MB402: ENTREPRENEURSHIP AND MSMEs
YEAR 2, SEMESTER – 4

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
03	Practical	03	45

Rationale

The field of entrepreneurship has a lot of scope. The scope of Entrepreneurship is not only tremendous in India but also in Abroad. Looking at our young generation, they are more focused on setting up their business than working under someone. These new young minds have given a great rise to the new start-ups we see now. They learn new skills and techniques about how to run a business. Before starting their own business, they can even work in a company and gain experience about how a company runs, its financial sources, its different departments and much more.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Journals/Magazines / Newspapers:

1. Journal of Marketing Analytics
2. Applied Marketing Analytics
3. Journal of Emerging Technologies and Innovative Research
4. Journal of Marketing

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Use of statistical tools for decision making with respect to activities.
CO2	Interpret analysed results for marketing decision making.
CO3	Use application of marketing analytics for forecasting.
CO4	Understand different marketing strategies and its effectiveness with reference to analytics.

MB420: DERIVATIVES AND RISK MANAGEMENT
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Risk Management is not about the elimination of risk; it is about the management of risk. Financial Derivatives serve a useful purpose in fulfilling risk management objectives. Through derivatives, risks from traditional instruments can be efficiently unbundled and managed independently. Used correctly, derivatives can save costs and increase returns. Financial derivatives can be used in two ways; to hedge against unwanted risk or to speculate by taking apposition in anticipation of a market movement. Organizations today use financial derivatives to actively seek out specific risks and speculate on the direction of interest-rate or exchange-rate movements, or they can use derivatives to hedge against unwanted risk. However, organizations should be careful in using such derivative instruments that fit best with their corporate risk management philosophy.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Derivatives Market	07
2	Forward and Futures Contract	10
3	Option Contracts	12
4	Innovations in Indian Derivatives Market	11
5	Application of Derivatives- I	10
6	Application of Derivatives- II	10
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Derivatives Market

07 hours

Meaning of Derivatives, Types of Derivative instruments, Forwards, Futures, Options, Swaps, Derivative Terminologies, Significance of Derivatives, Forward vs Futures

Module 2: Forward and Futures Contract

10 hours

Market Participants in Forward and Futures, Forward Contracts and its payoff, Specification of Futures Contract, Operation of Margins, Newspaper Quotes, Determination of Forward and Futures Prices

Module 3: Option Contracts

12 hours

Option Basics, Types of Option Contracts, Factors Affecting Option Pricing, Trading Strategies Using Spread and Combination, Exotic Options, Option Greeks

Module 4: Innovations in Indian Derivatives Market

11 hours

Interest Rate Futures, Currency Futures, Index Futures, Commodity Derivatives, Covered Interest Arbitrage, Interest Rate Swaps, Currency Swaps

Module 5: Application of Derivatives- I

10 hours

Concept of Open Interest, Put Call Ratio, Binomial Model for Option Pricing, Black – Scholes Option Pricing Models,

Module 6: Application of Derivatives- II

10 hours

Applying Options and Futures Hedging Strategies on Real Time Data from Exchanges i.e. Equity, Commodity and Currency Exchanges, Calculating Mark to Market Margins on Real Time Data from Exchanges

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90

MB423: FINANCIAL ANALYTICS
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course is designed as a beginners course for students who want to pursue a career as financial analyst. The increasing use of business analytics in financial services like banking, insurance, securities markets, and regulators makes this course an effective first step. The course will be useful for those wanting to join in departments of finance, CFO offices, as investor relations. It will be also helpful for those joining any project offices where budgets, valuations, road maps, planning, and process efficiency requiring future projections of cash flows, growth rates, risk, and return are prepared.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Data Analytics for Decision Making	10
2	Financial Statistics	10
3	Basics of Analyzing Financial Data	10
4	Improving Investment Decisions	10
5	Forecasting Strategies	10
6	Machine Learning	10
Total Contact Hours		60

Course Syllabus

Module 1: Data Analytics for Decision Making

10 hours

Introduction to data analytics, Introduction to finance analytics, Types of financial analytics, Features of financial analytics, Data in finance, Limitations of data analytics, Definition of Machine Learning, Understanding Objectives of Machine Learning, Various Components of Machine Learning - Data Storage – Data Processing – Deriving, Variables – Transformation – Generalization – Sampling, Features of Machine Learning

Module 2: Basics of Analyzing Financial Data

10 hours

Wrangling Financial Data, Exploratory Analysis of Financial Data, Understanding Basic Finance using R and Python

Module 3: Accounting Data Analytics

10 hours

Data Analytics for Accounting and Identifying the Questions, Mastering the Data, Performing the Test Plan and Analyzing the Results, Communicating Results and Visualizations, Financial Statement Analytics

Module 4: Improving Investment Decisions

10 hours

Portfolio Analytics, Predicting Stock Prices/Returns

Module 5: Forecasting Strategies

10 hours

News Analytics, Time Series Analysis and Forecasting, GARCH, ARIMA Models for time series analysis and forecasting

Module 6: Machine Learning

10 hours

Supervised Learning, Applications in Finance, Interpretation of software model output, Unsupervised Learning, Applications in Finance, Evaluate ML techniques for analysis of high-volume accounting data, Classifying fraud risk factors in accounting transactions, Profiling customer buying and payment performance based on known or unknown attributes, Clustering accounting data for internal control procedure

**MB430: INTERNATIONAL HUMAN RESOURCE MANAGEMENT
YEAR 2, SEMESTER – IV**

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Human Resource Management Professionals are required to shoulder the HR department in any organization. International HRM demands HR professionals to get acquainted with HR skills and knowledge required to take international assignments. This course will enable students to apply their HRM knowledge in an international context and at the same time acquire the approaches to deal with various issues related to international assignments, expatriation, and repatriation processes. Students will also get acquainted with HR strategies needed for effective decision-making in international ventures.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction and Overview	10
2	Recruiting and Selecting Staff for International Assignments – Performance Management	10
3	Training and Development	10
4	International Compensation System	08
5	Repatriation	06
6	Industrial Relations	06
7	Contemporary Issues	03
Total Contact Hours		60

Course Syllabus

Module 1: Introduction and Overview

10 hours

Defining International HRM, Difference between Domestic and International HRM Approaches to Staffing, Transferring Staff for International Business Activities, The Role of an Expatriates, The Role of Non-Expatriates, The Role of the Corporate HR Functions, Understanding Culture, its Coverage, Determinants, Cross-Cultural Theory, Approaches to IHRM, The Path to Global Status, Control Mechanisms, Mode of Operation

Module 2: Recruiting and Selecting Staff for International Assignments – Performance Management

10 hours

Staffing Policies, Selection Criteria, Issues in Staff Selection, Factors Associated with Individual Performance, Appraisal Criteria for Appraising International Employees

Module 3: Training and Development

10 hours

Types of Cross-Cultural Training, Expatriate Training, Components of Effective Pre-Departure Training, Developing International Staff Developing Staff through, Dual Career Couples

Module 4: International Compensation System

08 hours

Objectives, Approaches to International Compensation, Practices to International Compensation Repatriation

Module 5: Repatriation

06 hours

The Repatriation Process, Repatriation Process, Individual Reactions to Re-Entry Designing a Repatriation Program

Module 6: Industrial Relations

06 hours

Introduction, Key Issues in International Industrial Relations, The Response of Trade Unions to Multinationals, The Issues of Social Dumping

**MB431: HUMAN RESOURCE INFORMATION SYSTEM
YEAR 2, SEMESTER – IV**

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

A software solution that maintains, manages, and processes detailed employee information and human resources-related policies and procedures. With the help of information system this course enables students to adopt to simpler centralized operations with better productivity and efficiency. This course with the real-time information that an HRIS provides can make students gather and track accurate data to create reports. Students will also get acquainted with.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction and Concepts of HRIS	07
2	Pre-Implementation Stage of HRIS	08
3	HRIS Needs Analysis	12
4	Application of HRIS	12
5	Implementation and HRD through Information System	10
6	HR Data, Security, Services and operations via HRIS	08
7	Contemporary Issues	03
Total Contact Hours		60

Course Syllabus

Module 1: Introduction and Concepts of HRIS

07 hours

With the Help of a software; Evolution of HRMS, Employee Life Cycle, HRIS System Life Cycle, Role of HRIS in Functioning of HR Department

Module 2: Pre-Implementation Stage of HRIS

08 hours

With the Help of a software; Packaged HRIS, Business Process Re-Engineering, Enterprise Resource Planning Systems, HRIS Planning, HRIS Expectation, Productivity through HRIS, HRIS Cost-Benefit Value Analysis, Getting Management Support for HRIS, Limitations of Computerization of HRIS

Module 3: HRIS Needs Analysis

12 hours

With the Help of a software; System Development Life Cycle (SDLC), HRIS – Long Range Planning, HRIS –Short Range Planning, Gap Analysis

Module 4: Application of HRIS

12 hours

With the Help of a software; Application of HRIS, Organization Design and Management, HRP and Recruitment, Employee Administration and Data, Maintaining Payrolls, Generating Leaves Records, Time Management, Travel Expenses, Benefits of HRIS, Global Employee Management, Talent Management, Integration and Interfacing

Module 5: Implementation and HRD through Information System

10 hours

With the Help of a software, Implementation of HRIS, HRIS Implementation Life Cycle, Systems Integration – Analysis, Design, Build and Deploy, Project Management and Governance, Timelines, Contingency Plans, Challenges Faced during the Implementation of HRIS Developing the HRIS, Tools in HRIS Development, HR Responsibility in each Phase of HRIS Development, HRIS in Large and Small Organizations

Module 6: H R Data, Security, Services and operations via HRIS

18 hours

With the Help of a software, HR Data and Security, Managing HR Data, Data Discussion by HRIS Modules, Security and Access to Data, Data Transmissions, HR Data Challenges and HR Shared Services, Historical Data and Data Achieved, HR Transactions-Pay Roll, Tax Processing, HR Shared Services, HR Operations, Run Time and Maintenance, Managing Changes to Business, Managing Changes to Systems, Reporting and Analytics, Measuring Operations and Success.

Module 7: Contemporary Issues

03 hours

Contemporary Issues of HRIS

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Practical examination will be based on project or report presentation and viva-voce examination or software based analysis depending on the nature of the course.

Text Book:

1. Michael J. Kavanagh, Mohan Thite, Richard D. Johnson, Human Resource Information System, Basics and Applications, Sage Publication (Latest Edition).

Reference Books:

1. Alfred Walker, Reshaping Human Resource Information System, McGraw Hill Publication, (Latest Edition).
2. Satish Kagdi, Practical Guideline to Human Resource Information System, PHI Learning (Latest Edition).
3. Orange HRM, Hand Book on Orange HRM, Orange HRM System, (Latest Edition).

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Apply Human Resource Management Systems in the corporate culture.
CO2	Develop human resource information systems and its significance in functional application within the organization.
CO3	Analyze the ways in which HRIS are bought and implemented for various levels in organization.
CO4	Propose Systems Integration – Analysis, Design, Build and Deploy using HRIS need analysis.

MB432: HUMAN RESOURCE ANALYTICS
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

This course will demonstrate that you have exceptional skills in managing and running HR Analytics functions successfully in an organization.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Human Resource Analytics	05
2	Consulting the Business	10
3	HR Data	10
4	Statistics in HR	10
5	Connecting HR Data using Power BI	10
6	Visualizing and Publishing HR Data using Power BI	10
7	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Human Resource Analytics

05 hours

Concept, Objectives and Historical Evolution of HR Analytics, Characteristics of HR Analytics, Strategic Focus of HR Analytics, Challenges with HR Analytics, Future of HR Analytics, HR Analytics in the Workplace and the Human Capital Framework.

Module 2: Consulting the Business

10 hours

Human Resource's Value Proposition, HR Analytics Maturity Model, Employee Life Cycles and Employee Experience, HR Analytics Cycle, Agile HR Analytics, Analytics Process Model (APM) and Its Phases.

Module 3: HR Data

10 hours

Purpose of HR Data, Ascendancy of Data, Data Management, Data Automation, Data Cleaning, Data Analysis.

Module 4: Statistics in HR

10 hours

Selecting Relevant Problem, Selecting Relevant Data, Understanding and Checking Data Errors, Comprehending HR Data Cleaning, Drawing Data Output, Measuring the Outcome, Reporting Insights, Working of Predictive Analytics, Machine Learning in HR Analytics, Predictive Vs. Regression Analysis, Rules of Reporting HR Analytics, Role of Data Scientist within HR Analytics, Use of HR Analytics Software.

Module 5: Connecting HR Data using Power BI

10 hours

Understanding Data structures, Connecting Transactional Data, Working with Transactional Data in Power BI, Structuring and Modelling Data, Creating HR Data Model, Structuring HR Data Model, Preparing HR Data Model for Analysis, Data Editing in Power BI.

Module 6: Visualizing and Publishing HR Data using Power BI

10 hours

Designing a Dashboard, Using Descriptive Statistics in Power BI, Utilizing Prevalent Dashboard Elements, Building HR Dashboard in Power BI, Understanding Design Principles, Publishing HR Reports Using Power BI, Dashboard Sharing, Data Visualization in Power BI.

Module 7: Contemporary Issues

05 hours

Contemporary issues in HR Analytics to Solve HR Components using HR Analytical Skills and Software.

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Talya Bauer, Berrin Erdogan, David E. Caughlin and Donald M. Truxillo, Human Resource Management: People, Data, and Analytics, Latest Edition, Sage Publication.

Reference Books:

1. Tracey Smith, HR Analytics: The What, Why and How, Latest Edition, CreateSpace Independent Pub.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	To Understand the function related HR metrics that are strategically required in organizations.
CO2	To Visualize & Monitor organizational health through HR Analytics.
CO3	To Create and Apply specific data for HR analytic tools to various HR function related issues.
CO4	To Prepare for the impact of HR Analytics tools and automation on HR practices and decision making.

**MB433: OCCUPATIONAL TESTING
YEAR 2, SEMESTER – IV**

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Management Professionals, more specifically HR professionals are required to understand the importance of selecting and retaining the right candidate for the right job. The course on Occupational Testing will enable students to understand the role played by psychological testing in recruitment, selection and manpower management in the organization

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Occupational Testing	08
2	Intelligence and Aptitude Testing	10
3	Personality Testing	10
4	Self-Report Inventories	08
5	Typological Tests	10
6	Projective Techniques	08
7	Contemporary Issues	04
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Occupational Testing

08 hours

Concept and Need of Occupational Testing, Pros and Cons of Occupational Testing, Psychological Testing and their Categories, Theory and Issues in Psychological Testing Assessment Centers, Integration of Profiles, Use of Occupational Testing in Competency Mapping.

Module 2: Intelligence and Aptitude Testing

10 hours

Theoretical Background Significance of Intelligence Testing, Types of Psychological Tests used for Testing the Intelligence, Application of Intelligence Tests, Theoretical Background Significance of Aptitude Testing, Types of Psychological Tests used for Testing the Aptitude (D.A.T.), Application of Aptitude Tests.

Module 3: Personality Testing

10 hours

Theoretical Background, Significance of Personality Testing, Types of Psychological Tests used for Testing the Personality (Multi-factor Personality Tests, 16.P.F., FIROB), Application of Personality Tests

Module 4: Self-Report Inventories

08 hours

Theoretical Background, Significance of Self-Report, Inventories Types of Self-Report Inventories (M.M.P.I) Application of Self-Report Inventories

Module 5: Typological Tests

10 hours

Theoretical Background, Significance of Typological Testing, Types of Typological Tests (M.B.T.I.), Application of Typological Tests

Module 6: Projective Techniques

08 hours

Theoretical Background ,Significance of Projective Techniques, Types of Projective Techniques (T.A.T.),Application of Projective Techniques.

Module 7: Contemporary Issues

04 hours

Contemporary Issues in OT

Course Evaluation

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Theory examination will be for 3 hours based on written paper for 70 marks.

Text Book:

1. Anne Anastasi, Psychological Testing, Pearson Publications, Latest Edition.

Reference Books:

1. Udai Pareekh, Training Instruments in HRD and OD, SAGE Publication, Latest Edition.
2. Robert Kaplan, Ennis Saccuzzo, Training Instruments in HRD and OD, Cengage Learning, Latest Edition.
3. Mike Bryon, The Ultimate Psychometric Test Book, Kogan Page, Latest Edition.
4. Liam Healy, Psychometric Tests for Dummies, John Wiley and Sons, Latest Edition.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Apply knowledge and skills of psychological testing in major HR decisions in an organizational setup.
CO2	Develop competence in selection, administration, and scoring from psychological testing.
CO3	Evaluate inferences from the results of psychological testing effectively.
CO4	Estimate the impact of test interpretation on the related stakeholders.

MB440: MACHINE LEARNING
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Machine Learning, a flavor of Artificial Intelligence has evolved into a competitive strategy that drives success across several organizations. This course will introduce the students to machine learning techniques and methods and expose them to applications of the same for real world decision making.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Machine Learning	10
2	Preparing the Data	10
3	Linear Regression	10
4	Classification Problem	10
5	Advanced Machine Learning and Forecasting	10
6	Contemporary Issues	10
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Machine Learning

10 hours

Introduction to Analytics and Machine Learning (ML), Framework for Developing ML Models, Getting started with Python, Import and export of data, Basic Python syntax.

Module 2: Preparing the Data

10 hours

Working with Data Frames, handling missing values, Exploration of data using visualization.

Module 3: Linear Regression

10 hours

Introduction regression, Building Simple Linear Regression Model, Model Diagnostics, Building Multiple linear regression, Concept of Cross- validation.

Module 4: Classification Problem

10 hours

Introduction to classification problem, Binary logistic regression, Classification tree, Decision tree.

Module 5: Advanced Machine Learning and Forecasting

10 hours

Introduction to Advanced Machine Learning, KNN Algorithm, Ensemble Methods, Random Forest, Boosting, Time-Series Analysis, MA, AR, ARMA Models.

Module 6: Contemporary Issues

10 hours

Contemporary Issues in analytics that can be analyzed and solved using Python.

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40

Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Practical examination will be based on project or report presentation and viva-voce examination or software-based analysis depending on the nature of the course.

Text Book:

1. Manaranjan Pradhan, U Dinesh Kumar, Machine Learning using Python, Latest Edition, Wiley.

Reference Books:

1. Bharti Motwani, Data Analytics using Python, Latest Edition, Wiley.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Understand the foundation of Machine Learning.
CO2	Use relevant python libraries for data preparation.
CO3	Develop and Analyze the model performance using various measures and techniques of machine learning.
CO4	Propose models that can be used for the purpose of prediction / forecasting.

Course Outcomes Mapping

Module	Module Name	Course Outcomes

MB441: DATA VISUALIZATION FOR ANALYSIS
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Theory	04	60

Rationale

Modern data visualization technology is causing a paradigm shift in the way organizations convert raw data into actionable information. Visualization facilitates rapid understanding of trends and outliers within datasets. Therefore, this course will provide students with a formal grounding in data visualization as well as hands-on experience using software such as Tableau, PowerBI, etc.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Creating Visual Analytics	10
2	Connecting to Data	10
3	Building First Visualization	10
4	Creating Calculations to Enhance Data	10
5	Forecasting with Tableau	10
6	Tips, Tricks & Time Savers	10
Total Contact Hours		60

Course Syllabus

Module 1: Creating Visual Analytics

10 hours

Configuring Data Environment, Leveraging Toolbar Icons, Data Window, Data Types & Aggregation, Building Visualization with rows and columns.

Module 2: Connecting to Data

10 hours

Measure Names & Values, Data, Extraction, Metrics vs dimensions, Data types and defaults, Aliases and names, Data, Visualization Concepts.

Module 3: Building First Visualization

10 hours

Chart Types, Text Tables, Maps, Trend Lines & Reference Lines, Sorting Data in Tableau, Enhancing View with Filters, Set, Groups & Hierarchies.

Module 4: Creating Calculations to Enhance Data

10 hours

Aggregation, Calculated Values & Table Calculations, Building Formula, Calculated fields, Table, Calculations.

Module 5: Forecasting with Tableau

10 hours

Generating new data with Forecasts, Ad Hoc, Analysis with Parameters.

Module 6: Tips, Tricks & Time Savers

10 hours

Improving Formatting Improving Appearance, Customizing Shapes & Colors.

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40

- University Examination will be carried out at the end of the semester.
- Practical examination will be based on project or report presentation and viva-voce examination or software based analysis depending on the nature of the course.

Text Book:

1. Daniel G Murray, Tableau, Latest Edition, Wiley.

Reference Books:

1. Stephen Few, Information Dashboard Design, Latest Edition, Analytics.

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Employ best practices in data visualization to develop charts, maps, tables, and other visual representations of data.
CO2	Apply Tableau's visualization features to conduct data analysis, especially exploration of an unfamiliar dataset.
CO3	Create compelling, interactive dashboards to combine several visualizations into a cohesive and functional whole.
CO4	Utilize advanced Tableau features including parameters, data blending, very large datasets, custom date hierarchies, and others.
CO5	Analyze data visualizations, dashboards, and Tableau Stories to support relevant communication for diverse audiences.

MB442: BIG DATA ANALYTICS
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Practical	04	60

Rationale

This course will introduce the concept of big data and challenges in managing and processing of big data. The course will introduce the component of Hadoop framework like, managing big data on HDFS, processing data using Map-reduce and different other components.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Big Data	10
2	Introduction to Hadoop	10
3	Hadoop Distributed File System	10
4	Understanding Map Reduce	10
5	Spark Framework	10
6	Contemporary Issues	10
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Big Data

10 hours

What is Big Data, Handling and Processing Big Data, Challenges in processing Big data, Data Storage and Analysis, The Big Data Technology Landscape, Example Applications

Module 2: Introduction to Hadoop

10 hours

Introducing Hadoop, RDBMS versus Hadoop, Distributed Computing Challenges, History and overview of Hadoop, Use Case of Hadoop, Hadoop Distributors, Processing Data with Hadoop, Interacting with Hadoop Ecosystem.

Module 3: Hadoop Distributed File System

10 hours

Significance of HDFS in Hadoop, Features of HDFS, The Design of HDFS, HDFS, Concepts: Blocks, Data replication, Namenodes and Datanodes, Accessing HDFS, (Command line interface), Java based Approach

Module 4: Understanding Map Reduce

10 hours

Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task Execution, Map Reduce Types, Formats, Map Reduce Features

Module 5: Spark Framework

10 hours

Components of Spark architecture, Apache Spark design principles, Spark features and characteristics, Apache Spark ecosystem components and their insights.

Module 6: Contemporary Issues

10 hours

Contemporary issues in Hadoop Framework analyzed and solved using HDFS Components.

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Practical examination will be based on project or report presentation and viva-voce examination or software based analysis depending on the nature of the course.

Text Book:

1. Russell and Taylor, Black Book Big Data, Dreamtech publications, 1st Edition, ISBN : 2017 – 9351199312

Reference Books:

1. Subhashini Chellappan Seema Acharya, Big Data and Analytics, Wiley Publication, Latest Edition –ISBN : 812657951X

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	Understand the concept of big data analytics and big data application
CO2	Manage and understand the components & framework of Hadoop
CO3	Analyze the Hadoop map reduce and Hadoop file system
CO4	Apply and Build the ecosystem of Big Data and Hadoop with its components.

Course Articulation Matrix

		PO1	PO2	PO3	PO4	PO5
		<i>Analyze</i> contemporary issues and apply management knowledge for resolution.	<i>Practice</i> effective communication and interpersonal skills.	<i>Understand</i> Global Perspectives and exhibit Cross-Cultural sensitivity.	<i>Demonstrate</i> Attitude for continuous learning and development.	<i>Ability</i> to lead themselves and others in the achievement of organizational goals, Contributing effectively to a team environment.
CO1	<i>Understand</i> the concept of big data analytics and big data application	2	1	1	1	1
CO2	<i>Manage</i> and <i>understand</i> the components & framework of Hadoop	3	2	2	1	2
CO3	<i>Analyze</i> the Hadoop map reduce and Hadoop file system	3	3	2	1	1
CO4	<i>Apply</i> and build the ecosystem of Big Data and Hadoop with its components.	2	3	3	2	1

MB443: DATA MINING AND BUSINESS INTELLIGENCE
YEAR 2, SEMESTER – IV

Credit	Component	Instruction/ Contact/ Practical Hours (Per Week)	Instruction/ Contact/ Practical Hours (Per Course)
04	Practical	04	60

Rationale

This course will establish a relation between Data Mining techniques models and their implications on the Business Intelligence Components of an Industry, which effectively used for Decision-making.

Course Pedagogy

The course will emphasize self-learning and active classroom interaction based on students' prior preparation. The course instructor is expected to prepare a detailed session-wise schedule, showing the topics to be covered, the reading material and case material for every session. Wherever the material for any session is drawn from sources beyond the prescribed text-book, reference books, journals and magazines in the library, or from websites and other resources not accessible to the students, the course instructor should make the material available to the students well in advance, so that the students can come prepared for the classes. The pedagogical mix will consist of classroom sessions, assignments, presentations, management exercises or games/simulations or activities and student feedback.

Course Outline

Module Number	Title of the Module	Contact Hours
1	Introduction to Data Mining	10
2	Data Exploration	05
3	Data Preprocessing	05
4	Data Classification	15
5	Clustering and Outliers	10
6	Frequent Pattern Mining and Business Intelligence	05
7	BI and Data Mining Application	05
8	Contemporary Issues	05
Total Contact Hours		60

Course Syllabus

Module 1: Introduction to Data Mining

10 hours

Types of Data Mining Systems, Advantages of Data Mining, Disadvantages of Data Mining

Module 2: Data Exploration

05 hours

Data – Overview, Data Visualization Techniques, Types of Attributes of Data, Statistical Description of Data

Module 3: Data Preprocessing

05 hours

Reasons Preprocessing, Data Cleaning, Data Integration, Data Reduction, Data Transformation, Data Discretization

Module 4: Data Classification

15 hours

Data Preparation, Classification Methods, Predictions, Model Evaluation, Combining Classifiers

Module 5: Clustering and Outliers

10 hours

Types of Data in Clustering, Clustering Methodologies, Types of Outliers, Outliers Challenges, Outlier Detection Methods and Approaches

Module 6: Frequent Pattern Mining and Business Intelligence

15 hours

Market Basket Analysis, Mining Multilevel Rules, Association Mining, Constraint-Based Association Mining, Defining Business Intelligence, BI –Architecture, BI – Framework, Role of Mathematical Models in BI, Ethics and BI

Module 7: BI and Data Mining Application

05 hours

ERP and BI, BI Application in CRM, BI Applications in Marketing, BI Applications in Finance, BI Applications in Logistics and Production, BI Applications in Various Sectors

Module 8: Contemporary Issues

05 hours

Course Evaluation

I. Continuous and Comprehensive Evaluation (30 Marks)

Component	Marks
Quiz	80
Assignment/ Project/ Presentation	90
Online Course	60
Internal Examination	40
Participation	30
Total marks (CCE)	300

II. Semester End Evaluation (70 Marks):

- University Examination will be carried out at the end of the semester.
- Practical examination will be based on project or report presentation and viva-voce examination or software based analysis depending on the nature of the course.

Text Book:

1. S. K. Shinde, Uddagiri Chandrasekhar, Data Mining and Business Intelligence, Dreamtech Press, (Latest Edition).

Reference Books:

1. Carlo Vercellis, Business Intelligence: Data Mining and Optimization for Decision Making, Wiley India. (Latest Edition).

Programme Outcomes: Upon successful completion of the course, students will be,

PO1	Analyze contemporary issues and apply management knowledge for resolution.
PO2	Practice effective communication and interpersonal skills.
PO3	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.
PO4	Demonstrate Attitude for continuous learning and development.

Course Outcomes: Upon successful completion of the course, students will be,

CO1	To Understand the various data Mining principle, concepts and learning algorithm in data mining.
CO2	To Explore and Apply the different processing and preprocessing techniques to process the data.
CO3	To Create skill in selecting the appropriate data mining algorithm for solving practical problems.
CO4	To identify how various business intelligence systems can contribute to organizational success through use of common methods used in business intelligence.

Course Outcomes Mapping

Module	Module Name	Course Outcomes			
		CO1	CO2	CO3	CO4
1	Introduction to Data Mining	√			
2	Data Exploration		√		
3	Data Preprocessing		√		
4	Data Classification			√	
5	Clustering and Outliers		√		
6	Frequent Pattern Mining and Business Intelligence	√		√	
7	BI and Data Mining Application		√		√
8	Contemporary Issues		√		√

Course Articulation Matrix

		PO1	PO2	PO3	PO4	PO5
		Analyze contemporary issues and apply management knowledge for resolution.	Practice effective communication and interpersonal skills.	Understand Global Perspectives and exhibit Cross-Cultural sensitivity.	Demonstrate Attitude for continuous learning and development.	Ability to lead themselves and others in the achievement of organizational goals, Contributing effectively to a team environment.
CO1	To Understand the various data Mining principle, concepts and learning algorithm in data mining	2	3	-	2	1
CO2	To Explore and Apply the different processing and preprocessing techniques to process the data	3	2	-	-	1
CO3	To Create skill in selecting the appropriate data mining algorithm for solving practical problems.	3	3	-	1	1
CO4	Understand the basics of formal logic.	2	3	-	1	1
