

Faculty of Technology & Engineering
Devang Patel Institute of Advance Technology and Research
Bachelor of Technology Programme
Computer Engineering
(B.Tech. CE)

ACADEMIC
REGULATIONS
&
SYLLABUS
(Choice Based Credit System)

Academic Year: 2019-2020

Devang Patel Institute of Advance Technology and Research (DEPSTAR)

Vision

To be known as the leading institute for teaching & learning supported by research and futuristic(advanced) technologies.

Mission

To engender globally competent citizens to serve as a deployable techno commercial engineers for the betterment of society by:-

- Encouraging academic development through state-of-the-art infrastructure
- Inculcating professional behavior, fostering sports, cultural, societal activities, enriching with emotional quotient for their holistic development.
- Encouraging peer to peer learning that creates greater confidence and independence in learning as well as greater understanding of the subject.
- Inculcating cross-cultural, leadership, ethical, interpersonal skills which will assist them in working collaboratively in the corporate world.

Department of Computer Engineering

Vision

To teach (impart) the basic fundamentals of engineering concepts (knowledge), technical/technological skills, research skills and above all the practical ability to apply the knowledge to real situations. Additionally, to install the critical values that will help in preparing the students develop into more effective, productive and focused IT professionals, good citizen and industry ready product to touch their lives tomorrow.

Mission

The department of Computer Engineering is committed

1. To provide world-class educational activities
2. To deploy latest technologies
3. To foster research activities in consultation with academia and industry

THE PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1	To prepare the student(s) for successful career as an engineer, a corporate or a government professional, a scientist, an academician, a technocrat, an administrator and an entrepreneur.
PEO2	To make students demonstrate their abilities to adapt to a rapidly changing environment by having learning approach and apply new skills and new technologies to solve the problems.
PEO3	To create an ambience where the students are cared for in every aspect and motivated to become excellent working professionals who will continue to cherish their association with the organization as a whole, staff and colleagues.
PEO4	To provide continued professional development and lifelong learning throughout their career to inculcate strong teamwork and by installing lacking skills for the benefit of the society.
PEO5	To prepare the students to apply their technical skill(s) to analyse and design appropriate solution(s) with social consciousness and ethical values.

PROGRAM ARTICULATION MATRIX

(-Not Mathing,1-Low,2,3-High)

Mission Statement	PEO1	PEO2	PEO3	PEO4	PEO5
To provide world-class educational activities	3	3	3	3	3
To deploy latest technologies	-	2	3	3	-
To foster research activities in consultation with academia and industry	3	2	2	3	3

PROGRAM OUTCOMES (POs)

At the end of the program, the student will be able to:

PO1	Engineering knowledge: Apply knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

At the end of the program, the student will be able to:

PSO1	Apply good analytical, design and implementation skills required to formulate and solving computational problems.
PSO2	Excellent adaptability to function in multi-disciplinary work environment, good interpersonal skills in appreciation of professional ethics and societal responsibilities.

FACULTY OF TECHNOLOGY AND ENGINEERING

ACADEMIC REGULATIONS Bachelor of Technology Programmes Choice Based Credit System

To ensure uniform system of education, duration of undergraduate and post graduate programmes, eligibility criteria for and mode of admission, credit load requirement and its distribution between course and system of examination and other related aspects, following academic rules and regulations are recommended.

1. *System of Education*

Choice based Credit System with Semester pattern of education shall be followed across The Charotar University of Science and Technology (CHARUSAT) both at Undergraduate and Master's levels. Each semester will be at least 90 working day duration. Every enrolled student will be required to take a course works in the chosen subject of specialization and also complete a project/dissertation if any. Apart from the Programme Core courses, provision for choosing University level electives and Programme/Institutional level electives are available under the Choice based credit system.

2. *Duration of Programme*

(i)	Undergraduate programme	(B. Tech.)
	Minimum	8 semesters (4 academic years)
	Maximum	16 semesters (8 academic years)

3. *Eligibility for admissions*

As enacted by Govt. of Gujarat from time to time.

4. *Mode of admissions*

As enacted by Govt. of Gujarat from time to time.

5. *Programme structure and Credits*

As per annexure – 1 attached

6. *Attendance*

- 6.1 All activities prescribed under these regulations and listed by the course faculty members in their respective course outlines are compulsory for all students pursuing the courses. No exemption will be given to any student from attendance except on account of serious personal illness or accident or family calamity that may genuinely

prevent a student from attending a particular session or a few sessions. However, such unexpected absence from classes and other activities will be required to be condoned by the Dean/Principal.

6.2 Student attendance in a course should be Minimum 80%.

7 Course Evaluation

7.1 The performance of every student in each course will be evaluated as follows:

- 7.1.1 Internal evaluation by the course faculty member(s) based on continuous assessment, for 30% of the marks for the course; and
- 7.1.2 Final examination by the University through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these, for 70% of the marks for the course.

7.2 University Examination

- 7.2.1 The final examination by the University for 70% of the evaluation for the course will be through written paper and 100% for practical test or oral test or presentation by the student or a combination of any two or more of these.
- 7.2.2 **In order to earn the credit in a course a student has to obtain grade other than FF.**

7.3 Performance at Internal & University Examination

- 7.3.1 Minimum performance with respect to internal marks as well as university examination will be an important consideration for passing a course. Details of minimum percentage of marks to be obtained in the examinations (internal/external) are as follows

Minimum marks in University Exam per subject	Minimum marks Overall per subject
40%	45%

- 7.3.2 A student failing to score 45% of the final examination will get a FF grade.
- 7.3.3 If a candidate obtains minimum required marks per subject but fails to obtain minimum required overall marks, he/she has to repeat the university examination till the minimum required overall marks are obtained.

8 Grading

8.1 The total of the internal evaluation marks and final University examination marks in each course will be converted to a letter grade on a ten-point scale as per the following scheme:

Table: Grading Scheme (UG)

Range of Marks (%)	≥80	≥73 <80	≥66 <73	≥60 <66	≥55 <60	≥50 <55	≥45 <50	<45
--------------------	-----	------------	------------	------------	------------	------------	------------	-----

Letter Grade	AA	AB	BB	BC	CC	CD	DD	FF
Grade Point	10	9	8	7	6	5	4	0

8.2 The student's performance in any semester will be assessed by the Semester Grade Point Average (SGPA). Similarly, his performance at the end of two or more consecutive semesters will be denoted by the Cumulative Grade Point Average (CGPA). The SGPA and CGPA are calculated as follows:

- (i) $SGPA = \frac{\sum C_i G_i}{\sum C_i}$ where C_i is the number of credits of course i
 G_i is the Grade Point for the course i
and $i = 1$ to n , n = number of courses in the semester
- (ii) $CGPA = \frac{\sum C_i G_i}{\sum C_i}$ where C_i is the number of credits of course i
 G_i is the Grade Point for the course i
and $i = 1$ to n , n = number of courses of all semesters up to which CGPA is computed.
- (iii) No student will be allowed to move further if CGPA is less than 3 at the end of every academic year.
- (iv) A student will not be allowed to move to third year if he/she has not cleared all the courses of first year.
- (v) A student will not be allowed to move to fourth year if he/she has not cleared all the courses of second year.

9. Awards of Degree

9.1 Every student of the programme who fulfils the following criteria will be eligible for the award of the degree:

- 9.1.1 He should have earned at least minimum required credits as prescribed in course structure; and
- 9.1.2 He should have cleared all internal and external evaluation components in every course; and
- 9.1.3 He should have secured a minimum CGPA of 4.5 at the end of the programme;
- 9.1.4 **In addition to above, the student has to complete the required formalities as per the regulatory bodies, if any.**

9.2 The student who fails to satisfy minimum requirement of CGPA at the end of program will be allowed to improve the grades so as to secure a minimum CGPA for award of degree. Only latest grade will be considered.

10. Award of Class

The class awarded to a student in the programme is decided by the final CGPA as per the following scheme:

Distinction: $CGPA \geq 7.5$ & ≤ 10.0

First class: $\text{CGPA} \geq 6.0 \text{ \& } < 7.5$

Second Class: $\text{CGPA} \geq 5.0 \text{ \& } < 6.0$

Pass Class: $\text{CGPA} < 5.0$

11. Transcript

The transcript issued to the student at the time of leaving the University will contain a consolidated record of all the courses taken, credits earned, grades obtained, SGPA, CGPA, class obtained, etc.

Choice Based Credit System

With the aim of incorporating the various guidelines initiated by the University Grants Commission (UGC) to bring equality, efficiency and excellence in the Higher Education System, Choice Based Credit System (CBCS) has been adopted. CBCS offers wide range of choices to students in all semesters to choose the courses based on their aptitude and career objectives. It accelerates the teaching-learning process and provides flexibility to students to opt for the courses of their choice and / or undergo additional courses to strengthen their Knowledge, Skills and Attitude.

1. CBCS – Conceptual Definitions / Key Terms (Terminologies)

1.1. Core Courses

1.1.1 University Core (UC)

University Core Courses are those courses which all students of the University of a Particular Level (PG/UG) will study irrespective of their Programme/specialisation.

1.1.2 Programme Core (PC)

A ‘Core Course’ is a course which acts as a fundamental or conceptual base for Chosen Specialisation of Engineering. It is mandatory for all students of a particular Programme and will not have any other choice for the same.

1.2 Elective Course (EC)

An ‘Elective Course’ is a course in which options / choices for course will be offered. It can either be for a Functional Course / Area or Streams of Specialization / Concentration which is / are offered or decided or declared by the University/Institute/Department (as the case may be) from time to time.

1.2.1 Institute Elective Course (IE)

Institute Courses are those courses which any students of the University/Institute of a Particular Level (PG/UG) will choose as offered or decided by the University/Institute from time-to-time irrespective of their Programme /Specialisation

1.2.2 Programme Elective Course (PE):

A ‘Programme Elective Course’ is a course for the specific programme in which students will opt for specific course(s) from the given set of functional course/ Area or Streams of Specialization options as offered or decided by the department from time-to-time

1.2.3 Cluster Elective Course (CE):

An ‘Elective Course’ is a course which students can choose from the given set of functional course/ Area or Streams of Specialization options (eg.

Common Courses to EC/CE/IT/EE) as offered or decided by the Institute from time-to-time.

1.3 Non Credit Course (NC) - AUDIT Course

A 'Non Credit Course' is a course where students will receive Participation or Course Completion certificate. This will not be reflected in Student's Grade Sheet. Attendance and Course Assessment is compulsory for Non Credit Courses

Note:

- **University Elective (UE):-** University Electives are offered in common slots and offered by various departments. Students of any programme can select these electives. Subjects like Research Methodology, Occupational Health & Safety, Engineering Economics, Professional Ethics, and Project Management, Disaster Management, Risk Management etc. can be included.

- **Cluster Elective (CT):-** Institutional Electives means common electives among a cluster of programmes (eg. CE/IT/EC/EE etc.). If Institutional Electives are not applicable, it will be Programme electives
- **Programme Elective (PE):-**
- **Institute Elective (IE):-**
- Provision for Auditing a course will be available
- Audit courses may be offered and decided based on need of the institute/program(s)

University Elective - I (UE - I)	University Elective - II (UE - II)
Introduction to MATLAB Programming	Prototyping Electronics with Arduino
Art of Programming	Web Designing
Environmental Sustainability and Climate Change	Basics of Environmental Impact Assessment
Python for Electrical Engineering	Computer Programming for Electrical Engineering
ICT Resources and Multimedia	Internet Technology and Web Design
Engineering Drawing	Material Science
Fundamentals of Packaging	Cosmetics in daily life
Basic Laboratory Techniques	Life Style Diseases & Management
First Aid & Life Support	Occupational Health & Ergonomics
Health Promotion and Fitness	Programming the Internet
Introduction to Web Designing	Health Care Management
Banking and Insurance

SYLLABI (Semester – 3)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

MA245: DISCRETE MATHEMATICS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	0	-	4	4
Marks	100	0	-	100	

Outline of the course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Set Theory and Predicate calculus	08
2.	Relations, Lattices and Boolean algebra	14
3.	Abstract Algebra	10
4.	Graphs and Graph Algorithms	12
5.	Matrix Algebra- II	10
6.	Fundamentals of Finite State Machine and Recurrence	06

Total hours (Theory): 60

Total hours (Lab): 00

Total hours: 60

Detailed Syllabus:

1 Set Theory and Predicate Calculus 08 Hours 14%

- 1.1. Proposition, Types of Proposition, Tautology, Contradictions, Connectives, Types of connectives
- 1.2. Logical equivalence, Verification using truth table
- 1.3. Converse, Inverse and Contrapositive, Normal forms
- 1.4. Introduction to predicates and quantifiers
- 1.5. Predicate calculus using rules of inferences
- 1.6. Logic in proof, Methods of Proof,
- 1.7. Mathematical Inductions (First Principle)

1.8. Properties of set operations with Predicate logic.

1.9. Cardinality of sets, Cartesian product of sets

2 Relations, Lattice and Boolean Algebra

14 Hours 22%

2.1. Relations on sets, Types of Relations in a set

2.2. Properties of Relations

2.3. Representations of Relations

2.4. Equivalence relation, Covering of a set, Partition of a set

2.5. Partially ordered relations, Partially ordered sets, Lattice, Sub lattices

2.6. Properties of lattice

2.7. Some Special Lattices

2.8. Finite Boolean Algebra, atoms, anti - Atoms,

2.9. Sub - Boolean algebra, Boolean Expression

2.10. Boolean Functions,

2.11. Canonical Forms, Karnaugh map representation, Quine Mckausky's Algorithm

3 Abstract Algebra

10 Hours 16%

3.1. Groupoid, Semi group, Monoid, Group

3.2. Order of group, order of an element, Lagrange's theorem

3.3. Subgroup, Cyclic subgroup, Permutation Group

3.4. Introduction to Ring Theory

3.5. Sub ring, Ring Homomorphism,

3.6. Ideals

4 Graphs and Graph Algorithms

12 Hours 20%

4.1. Basic terminologies, Simple graph, Types of graphs

4.2. Degree of a vertex

4.3. Sub graphs, Spanning Sub-graphs, Isomorphic graphs

4.4. Path and connectivity

4.5. Eulerian and Hamiltonian graph

4.6. Matrix Representation of graph

4.7. Planar Graphs

4.8. Introduction to tree, Directed tree, Forest

4.9. Types of trees, Spanning Tree, Minimal Spanning Tree

- 4.10. Algorithm to find minimal spanning tree, Prim's, Krushkal's and Dijkstra's Algorithm

5 Matrix Algebra -II

10 Hours 16%

- 5.1. Revision of Determinant and Matrix
5.2. Eigen values and Eigen vectors of Matrices
5.3. Eigen values and Eigen vectors of Special Matrices
5.4. Applications of Cayley - Hamilton Theorem

6 Basics of Finite State Machine and Recurrence Relation

06 Hours 12%

- 6.1. Introduction to Strings, Languages,
6.2. Regular expression, Grammars
6.3. Introduction to Recurrence relation,
6.4. Generating function

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Develop logical argument using truth table and rules of inferences in predicate calculus.
CO2	Relation and types of relations define on sets and utilize it to construct Hasse diagram and lattices on sets.
CO3	Different algebraic structures like groupoid, semi group, monoid, group , cyclic group and permutation group
CO4	Graph and types of the graphs and identify the real world phenomena in terms of graph theory.
CO5	find and explain significant of Eigenvalues and Eigenvectors of a square matrix, use Cayley-Hamilton's theorem to find inverse and power of a square matrix.
CO6	The concept of recurrence, generating functions and their applications in solving recurrence relations.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	1	-	1	-	-	-	-	-	-	-	2	-
CO2	3	2	-	-	-	-	-	-	-	-	-	-	3	-
CO3	3	1	-	-	-	-	-	-	-	-	-	-	2	-
CO4	3	2	1	-	2	-	-	-	-	-	-	-	3	1
CO5	3	1	-	-	-	-	-	-	-	-	-	-	3	-

CO6	3	-	-	-	1	-	-	-	-	-	-	-	3	-
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

CE251: JAVA PROGRAMMING

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	4	-	7	5
Marks	100	100	-	200	

Pre-requisite courses:

- Basic programming skill.

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Fundamental of Programming in Java	02
2.	Class Fundamentals	04
3.	Array & String Handling	02
4.	Inheritance, Interfaces & Packages	06
5.	Exceptions Handling	05
6.	Multithreaded Programming	07
7.	File I/O and NIO	07
8.	Java Collection Frameworks and Generics	12
	Total hours (Theory) :	45
	Total hours (Lab) :	60
	Total hours :	120

Detailed Syllabus:

1.	Fundamental of Programming in Java	02 Hours	04%
	History of Java, Basic overview of java, Bytecode, JVM Buzz-words, Application and applets, Constants, Variables & Data Types, Comment, Operators, Control Flow		
2.	Class Fundamentals	04 Hours	09%
	General form of class, Creating class Overloading methods, Constructor ,Declaring Object, Returning objects, using objects as parameters, Assigning object reference		

	variables, Introducing Access control , Understanding static Introducing final, The finalize () method,The this keyword ,Garbage collection		
3.	Array & String Handling	02 Hours	04%
	Array basics, String Array, String class, StringBuffer and StringBuilder class, String Tokenizer Class and Object Class		
4.	Inheritance, Interfaces & Packages	06 Hours	14%
	Inheritance: Using super creating multilevel Hierarchy, method overriding, Dynamic method dispatch, abstract classes, Using final with Inheritance, Using Package: Defining package, Finding package and CLASSPATH, Access protection, Importing package, Interface: Defining Interface, Default Methods, Implementing Interface, Variables in Interface		
5.	Exceptions Handling	05 Hours	11%
	Exception types, Try ...Catch...Finally, Throw, Throws, creating your own exception subclasses		
6.	Multithreaded Programming	07 Hours	16%
	Life cycle of thread, thread methods, thread priority, thread exceptions, Implementing Runnable interface, Synchronization and Concurrency		
7.	File NIO	07 Hours	16%
	File and Directories, Byte streams and character streams, Random Access Files,NIO: Meta Data File Attributes Buffers, Channels, Recursive Operation.		
8.	Collection Framework and Generics	12 Hours	26%
	Collections of objects, Collections: Sets, Sequence, Map, Understanding Hashing, Use of Array List & Vector, Generics Class, Lamda Expression, Functional Reference, Method Reference, Optional Classes, Processing data with streams		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand and implement Object Oriented programming concept using basic syntaxes of control Structures, strings and function for developing skills of logic building activity and garbage collection for saving resources.
CO2	Demonstrate basic problem solving skills: analyzing problems, modeling a problem as a system of objects, creating algorithms, and implementing models and algorithms in an object-oriented computer language (classes, objects, methods with parameters, abstract classes, interfaces, inheritance and polymorphism).
CO3	Use and develop Concurrency theory: progress guarantees, deadlock, livelock, starvation, linearizability.
CO4	Build and test program using new IO api and exception handling
CO5	Analyze and apply collection framework and generics to solve different data structure algorithms.
CO6	Understand and apply java new features

Course Articulation Matrix:

CE252: DIGITAL ELECTRONICS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Basic Electronics

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Number Systems	5
2.	Boolean Algebra and Logic Gates	5
3.	Simplification of Boolean Functions	6
4.	Combinational Logic	5
5.	Combinational Logic With MSI AND LSI	5
6.	Sequential Logic	10
7.	Registers, Counters and the Memory Unit	5
8.	Processor Logic Design	4
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Number Systems	05 Hours	10%
	Digital computer and digital systems, Binary Number, Number base conversion Octal and Hexadecimal Number, Complements, Binary Codes, Binary Storage and register, Binary Logic, Integrated Circuit		
2.	Boolean Algebra and Logic Gates	05 Hours	10%
	Basic Definition, Axiomatic Definition of Boolean Algebra, Minterm And Maxterms, Basic Theorem and Properties of Boolean Algebra, Logic Operations, Digital Logic Gates, IC digital Logic Families		
3.	Simplification of Boolean Functions	06 Hours	12%
	Two-Three Variable K-map, Four- Five Variable K-map, Product of sum Simplification, NAND or NOR implementation, Don't Care condition 3.4 Tabulation method		
4.	Combinational Logic	05 Hours	12%

	Introduction, Design Procedure, Hazards, Adder, subtractor, Code Conversion, Universal Gate, exclusive OR & equivalence functions		
5.	Combinational Logic With MSI and LSI	05 Hours	12%
	Introduction, Binary Parallel Adder, Decimal Adder, Magnitude Comparator, Decoder, Multiplexer, ROM, PLA, PAL		
6.	Sequential Logic	10 Hours	22%
	Introduction, RS,JK,D,T Flip-Flops, Triggering of Flip-Flops, Flip-Flop Excitation Tables, Analysis of Clocked Sequential Circuits, State Reduction and Assignment Design Procedure, Design of Counters, Design with State Equations		
7.	Registers, Counters and the Memory unit	05 Hours	12%
	Introduction, Registers, Shift Registers, Ripple Counters, Synchronous Counters, Timing Sequences, Memory Unit, Johnson counter		
8.	Processor Logic Design	04 Hours	10%
	Processor Organization, Arithmetic Logic Unit, Design of ALU, Status Register, Design of Shifter, Processor Unit		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand, convert and examine the structure of various number systems and its application in digital design.
CO2	Simplification of Boolean function and its conversion in different forms.
CO3	Understand, analyse and design various combinational circuits.
CO4	Compare different flip-flop characteristics and design of Flip-Flop with gates. With FF Design, understand and analyse various sequential circuits.
CO5	Explain the basic requirements of ALU design and its variation.

Course Articulation Matrix:

CE253: DATA COMMUNICATION & NETWORKING

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- N/A

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction and Basic Concepts	02
2.	The OSI Model	02
3.	Signals	04
4.	Encoding And Modulation	06
5.	Data Transmission	07
6.	Multiplexing	08
7.	Error Correction and Detection	05
8.	Data Link Control	05
9.	Local Area Networks	03
10.	Switching	03
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction and Basic Concepts	02 Hours	04%
	Why to study data communication?, Data Communication, Networks, Protocols and Standards, Standards Organizations		
2.	The OSI Model	02 Hours	04%
	The Model, Functions of the layers, TCP/IP Protocol Suites		
3.	Signals	04 Hours	11%

	Analog and Digital, Periodic and A periodic Signals, Analog Signals, Time and Frequency Domains, Composite Signals, Digital Signals		
4.	Encoding And Modulation	06 Hours	14%
	Digital to Digital Conversion, Analog to Digital Conversion, Digital to Analog Conversion, Analog to Analog Conversion		
5.	Data Transmission	07 Hours	18%
	Digital data transmission, DTE-DCE Interface, Modems, 56K Modems, Cable Modems, Guided Media, Unguided Media, Transmission Impairments, Performance Wavelength, Shannon Capacity, Media Comparison, PSTN		
6.	Multiplexing	08 Hours	14%
	Many to one/one to Many, Frequency division Multiplexing, Wave division Multiplexing, Time division Multiplexing, Multiplexing applications		
7.	Error Correction and Detection	05 Hours	09%
	Types of Errors, Detection, Parity Check, Vertical Redundancy Check, Longitudinal Redundancy Check, Cyclic Redundancy Check, Checksum, Error Correction		
8.	Data Link Control	05 Hours	09%
	Line Discipline, Flow Control, Error Control		
9.	Local Area Networks	03 Hours	04%
	802, Ethernet, Other Ethernet Networks, Token Bus, Token Ring, FDDI		
10.	Switching	03 Hours	07%
	Circuit Switching, Packet Switching		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Illustrate concept, architecture and organisation of computer networks
CO2	Analyse existing networking standards and implementations
CO3	Evaluate key networking protocols, and their hierarchical relationship in the

	context of a conceptual model, such as the OSI and TCP/IP framework
CO4	Understand how signals are used to transfer data between nodes
CO5	Identify the different types of network devices and their functions within a network
CO6	Create multiple host and network architectures, given business requirements and constraints

Course Articulation Matrix:

CE244: SOFTWARE GROUP PROJECT-I

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	0	4	-	4	2
Marks	0	100	-	100	

Pre-requisite courses:

- Programming Language, Software Engineering.

Outline of the Course:

- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Students will work together in a team (at most three) with any programming language.
- Students are required to get approval of project definition from the department.
- After approval of project definition students are required to report their project work on weekly basis to the respective internal guide.
- Project will be evaluated at least once per week in laboratory Hours during the semester and final submission will be taken at the end of the semester as a part of continuous evaluation.
- Project work should include whole SDLC of development of software / hardware system as a solution of particular problem by applying principles of Software Engineering.
- Students have to submit project with following listed documents at the time of final submission.
 - a. Final Project Report
 - b. Project Setup file with Source code
 - c. Project Presentation (PPT)
- A student has to produce some useful outcome by conducting experiments or project work.

Total hours (Theory) : 00

Total hours (Lab) : 30

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Create enhanced employment by moulding the students with higher technical skill.
CO2	Promote creative thinking, to provide hands on actual technology.
CO3	Handle software project and get use to software development processes.
CO4	Correlate knowledge of different subjects and apply theoretical knowledge to implement project for identified problem.
CO5	Write technical report and deliver presentation by applying different visualization tools and evaluation metrics.
CO6	Improve communication and presentation skill.

Course Articulation Matrix:

HS122A: VALUES AND ETHICS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	--	30/15	--	30/15	2
Marks	--	100	--	100	

Detailed Syllabus:

Sr. No.	Title of the unit	Minimum number of hours
1	Introduction to Values and Ethics • <i>Need, Relevance and Significance of Values and Ethics : General</i> • <i>Concept and Meaning of Values and Ethics</i>	06
2	Elements and Principles of Values • <i>Universal & Personal Values</i> • <i>Social, Civic & Democratic Values</i> <i>Adaptation Models & Methods of Values</i>	08
3	Applied Ethics • <i>Universal Code of Ethics</i> • <i>Professional Ethics</i> • <i>Organizational Ethics</i> • <i>Ethical Leadership</i> <i>Domain Specific Ethics</i>	08
4	Value, Ethics & Global Issues • <i>Cross-Cultural Issues</i> • <i>Role of Ethics & Values in Sustainability</i> • <i>Case Studies</i>	08
	Total hours (Practical):	30
	Total hours (Lab) :	--
	Total hours :	30

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand the concepts and mechanics of values and ethics.
CO2	Understand the significance of value and ethical inputs in and get motivated to apply them in their life and profession.
CO3	Understand the significance of value and ethical inputs in and get motivated to apply them in social, global and civic issues.

CO4	Develop their responsibility towards society.
CO5	Comprehend their own core values and adhere to those values at their workplace.
CO6	Practice Ethical Leadership.

SYLLABI

(Semester – 4)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CE245: DATA STRUCTURE AND ALGORITHMS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Programming Language

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to Data Structure.	04
2.	Linear Data Structure	12
3.	Non Linear Data Structure	16
4.	Sorting	10
5.	Searching	01
6.	Dictionaries	02
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction	04 Hours	08%
	Introduction to data structure (Types of data structure), Introduction to algorithms. Algorithm Analysis and Big O notation, Memory representation of Array: Row Order and Column Order, Abstract Data Types(ADT)		
2.	Linear Data Structure	12 Hours	27%
	Stack: Operations: push, pop, peep, change, Applications of Stack: Recursion: Recursive Function Tracing, Principles of recursion, Tail recursion, Removal of Recursion, Tower of		

	Hanoi, Conversion: Infix to Postfix, Infix to Prefix. Evaluation: Prefix and Postfix expression, Queue Simple Queue: Insert and Delete operation, Circular Queue: Insert and Delete operation, Concepts of: Priority Queue, Double-ended Queue, Applications of Queue, Linked List: Memory Representation of LL, Singly Linked List, Doubly Linked List, Circular Linked List, Applications of Linked List		
3.	Non Linear Data Structure	16 Hours	36%
	Tree: Tree Concepts, Tree Traversal Techniques: Pre-order, Post-order and In-order (Recursive and Iterative), Binary Search Tree: Iterative and Recursive, Balanced Trees (AVL Trees, Applications of Tree, Heaps: priority queues and Binary Heaps, Graph: Graph concepts, Memory Representation of Graph, BFS and DFS, Applications of Graph		
4.	Sorting	10 Hours	23%
	Sorting (concepts, Selection Sort, Bubble Sort, Merge Sort, Radix Sort, Insertion Sort, Heap Sort, Quick Sort)		
5.	Searching	01 Hours	02%
	Sequential Search, Binary Search		
6.	Dictionaries	02 Hours	04%
	Hashing, Hashing Functions, Collision-Resolution Techniques, Applications		

Course Outcome (COs):

At the end of the course, the students will be able to:

CO1	Understand and Implement Algorithms and core Data Structures such as stack, queue, hash table, priority queue, binary search tree and graph in programming language.
CO2	Analyse data structures in storage, retrieval and computation of ordered or unordered data.
CO3	Compare alternative implementations of data structures with respect to demand

	and performance.
CO4	Describe and evaluate the properties, operations, applications, strengths and weaknesses of different data structures.
CO5	Apply and select the most suitable data structures to solve programming challenges.
CO6	Discover advantages and disadvantages of specific algorithms.

Course Articulation Matrix:

CE246: Database Management System

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	4	-	8	6
Marks	100	100	-	200	

Pre-requisite courses:

- Data Structure

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introductory concepts of DBMS	04
2.	Relational Model	06
3.	Entity-Relationship model	07
4.	Formal Relational Query Languages	06
5.	Relational Database Design	09
6.	Transaction & Recovery Management	07
7.	Advanced Transaction Processing	06
8.	Database Security	06
9.	Indexing and Hashing	07
10.	Query Processing & Query Optimization	02
	Total hours (Theory) :	60
	Total hours (Lab) :	60
	Total hours :	120

Detailed Syllabus:

1.	Introductory concepts of DBMS	04 Hours	06%
	Introduction and applications of DBMS, Purpose of database, Data Independence, Database System architecture- levels, Mappings, Database users and DBA		
2.	Relational Model	06 Hours	10%
	Structure of Relational Databases, Database Schema,		

	Schema Diagram, Domains , Relations, Relational Query Languages, Relational Operations		
3.	Entity-Relationship model	07 Hours	12%
	Basic concepts, Design process, Constraints, Keys, Design issues, E-R diagrams, Weak Entity Sets, Extended E-R features- Generalization, Specialization, Aggregation, Reduction to E-R database schema		
4.	Formal Relational Query Languages	06 Hours	10%
	The relational Algebra, The Tuple Relational Calculus, The Domain Relational Calculus		
5.	Relational Database design	09 Hours	15%
	Functional Dependency–definition, Trivial and Non-Trivial FD, Closure of FD set, Closure of attributes, Irreducible set of FD, Normalization – 1NF, 2NF,3NF, Decomposition using FD- Dependency Preservation		
6.	Transaction & Recovery Management	07 Hours	12%
	Transaction concepts, Properties of Transactions, Serializability of transactions, Testing for Serializability, System recovery, Two- Phase Commit protocol, Recovery and Atomicity, Log-based recovery, Concurrent executions of transactions and related problems, Locking mechanism, Solution to Concurrency Related Problems, Deadlock, Two-phase locking protocol, Intent locking		
7.	Advanced Transaction Processing	06 Hours	10%
	Transaction-Processing Monitors, Transactional Workflows, Main-Memory Databases, Real-Time Transaction Systems, Long-Duration Transactions		
8.	Database Security	06 Hours	10%
	Views - What are views for?, View retrievals, View updates, Snapshots (a digression), Materialized view, Security – Security and Authentication, authorization in SQL, Data encryption, Missing Information - An overview of the 3VL approach		

9.	Indexing and Hashing	07 Hours	12%
	Basic Concepts, Ordered Indices, B+-Tree Index Files, B+-Tree Extensions, Multiple-Key Access, Static Hashing, Dynamic Hashing, Comparison of Ordered Indexing and Hashing, Bitmap Indices, Index Definition in SQL		
10.	Query Processing & Query Optimization	02 Hours	03%
	Overview, Measures of Query Cost, Selection Operation, Sorting, Join, Evaluation of Expressions, Transformation of relational Expressions, Estimating Statistics of expression results, Query Evaluation plans		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Apply the concepts of engineering i.e collecting data, organize the data in the systematic form, and arrange the data in a computational way and applying mathematics formation.
CO2	Analyse how data are stored and maintained using data models. Ready to assimilate the concept of data abstraction and design queries using SQL. Identify how data is represented in the relational model and create relations using SQL language
CO3	Identify and evaluate the constructs in the E-R model and issues involved in developing an E-R diagram. Convert an E-R diagram into a relational database schema. Declare and enforce integrity constraints on database using a state-of-art RDBMS.
CO4	Produce aggregate operators to write SQL queries which are not expressible in relational algebra. “More mathematical” notation may apply and also used in research and other venues. Combining these concepts allows production of sophisticated queries.
CO5	Decompose un-normalized tables into normalized compliant tables. Design and implement a normalize database schema for a given problem-domain. Produce strategies to minimise risks of security breaches in a range of network environments and data storage systems. Compute retrieval time and concluding with suitable indexing technique.

CO6	Compare transactions and their properties with (ACID) and without ACID. Apply locking protocol to ensure isolation. Develop logging technique to ensure atomicity and durability. Design a logical view which can be used for analytical tasks. Develop practical experience of the design and implement scalable, secure databases.

CE247: WEB TECHNOLOGIES

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	2	4	-	6	4
Marks	100	100	-	200	

Pre-requisite courses:

- N/A

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to WWW	01
2.	HTML 4.0	02
3.	HTML 5.0	02
4.	Cascading Style Sheet 2.0	02
5.	Cascading Style Sheet 3.0	03
6.	Client side Scripting Language (JavaScript)	05
7.	DOM (Document Object Model)	03
8.	JavaScript Framework (Jquery, AngularJS)	08
9.	Basics of PHP	04
	Total hours (Theory) :	30
	Total hours (Lab) :	60
	Total hours :	90

Detailed Syllabus:

1.	Introduction to WWW	01 Hours	03%
	Introduction of Web1.0/Web2.0/3.0, URL, URI, URN, DNS Client/Server Model, Protocols – TCP/IP, HTTP/HTTPS, SMTP, POP3, MIME, IMAP. Website vs. Portal vs. Blog vs. Forum, HTTP Request/Response Header.		
2.	HTML 4.0	02 Hours	07%
	Introduction of HTML, Headings, Comment, Paragraphs,		

	Formatting, Fonts, Links, Images, Tables, Lists, Forms.		
3.	HTML 5.0	02 Hours	07%
	Introducing HTML5, Structural and Semantics Elements, Input types, Form Elements and Attributes, Rich Media: Audio, Video, Canvas and SVG. HTML5 APIs: Geolocation, Drag/Drop, Web Storage, App Cache, Web Workers.		
4.	Cascading Style Sheet 2.0	02 Hours	07%
	CSS Introduction, Types of CSS, CSS Id & Class, CSS Box Model ,CSS Properties: Background, Text, Fonts, Links, Lists, Tables, Positioning, Display, Dimension, Floating, Pseudo-class, Pseudo-element, Image Opacity.		
5.	Cascading Style Sheet 3.0	03 Hours	20%
	Introducing CSS3, Selectors, Pseudo-classes and Pseudo-elements Borders and Box Effects, Background Images and Other Decorative Properties, Text Effects and Typographic Styles, Web Fonts, 2D Transforms, 3D Transforms, Transitions and Animations, Multiple Columns, User Interface, Flexible Box Layout and Grid Layout.		
6.	Client side Scripting Language (JavaScript)	05 Hours	17%
	Introduction to JavaScript, Data Types and Variables, Type Conversion, Operators, Decisions, Loops and Functions, Array, Common Mistakes, Debugging and Error Handling, Programming the Browser, Events, HTML Forms: Interacting with User, String Manipulation, Date, Time and Timers, Storing Information: Cookies.		
7.	DOM (Document Object Model)	03 Hours	10%
	DOM Tree, Descending with Child Nodes, Ascending with Child Nodes, Finding an Element by ID, Tag Name and Class, Creating Element, Deleting and Copying Content. Working with DMO: Dynamic Scripts, Dynamic Styles, Manipulating Tables.		
8.	JavaScript Framework (Jquery, AngularJS)	08 Hours	27%
	JQuery: jQuery core, Selectors, Attributes, Events, Effects		

	and jQuery UI. AngularJS: Modules, Directives, Controller, Data Bindings, Scopes, Filter, Table, SQL, Event		
9.	Basics of PHP	04 Hours	12%
	Overview of PHP, Environment Setup, PHP: Array, String, MySql with PHP		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand the concepts, technologies and standards underpinning the World Wide Web, Web 1.0, Web 2.0, Protocols etc.
CO2	Apply a structured approach to identify needs, interests, and functionality of a website using well-structured, easily maintained, standards-compliant, accessible HTML and CSS code.
CO3	Develop dynamic web pages using JavaScript.
CO4	Use scripting languages and web services to transfer data and add interactive components to web pages.
CO5	Design web applications using database technologies to store persistent data.
CO6	Create, build and deploy data-driven web applications for multiple platforms.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	1	2	1	1	-	-	-	2	-	2	-	-	1
CO2	3	3	3	1	3	2	-	2	2	-	2	2	3	2
CO3	3	3	3	2	3	2	-	2	2	-	2	2	3	3
CO4	3	2	3	1	3	2	-	2	2	-	2	2	3	3
CO5	3	2	3	1	3	2	-	1	2	-	2	2	3	3
CO6	1	2	2	1	3	-	-	1	1	-	1	1	1	1

Enter correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

If there is no correlation, put “-”

Recommended Study Material:

❖ Text book:

1. HTML 5 and CSS 3.0 to the Real World by Alexis Goldstein, Sitepoint publication.
2. Beginning JavaScript – 4th Edition by Paul Wilton, Jeremy McPeak, Wrox Publication.
3. Learning JQuery Third Edition, Jonathan Chaffer Karl Swedberg, Packt Publishing.
4. AngularJS O'Reilly, by Shyam Seshadri

❖ Reference book:

1. Learning Web Design by Jennifer Niederst Robbins, 3rd Edition, O'Reilly.
2. HTML5 Web Application Development by Example by J.M Gustafson.
3. Programming HTML5 Application by Zacbary Kessin, O'Reilly
4. JavaScript Bible, Gold Edition by Danny Goodman.
5. JavaScript for Absolute Beginners by Terry McNavage. Apress publication.
6. CSS Cook book By Christopher Schmitt, O'Reilly publication.
7. JQuery Cookbook, O'Reilly Media by Cody Lindley.

❖ Web material:

1. www.w3schools.com
2. www.tutorialspoint.com
3. www.tizag.com

❖ Software:

1. Sublime Text 3
2. Atom (text editor)
3. Visual code

CE248: OPERATING SYSTEM

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	0	5	4
Marks	100	50	0	150	

Pre-requisite courses:

- Introduction to computer and computer architecture.

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction	03
2.	Process Management	06
3.	Inter process Communication	08
4.	Deadlock	06
5.	Memory Management	08
6.	Input Output Management	04
7.	File Systems	06
8.	Unix/Linux File System	04
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction	03 Hours	06%
	What is an OS? Evolution Of OS, OS Services, Types Of OS, Concepts of OS, Different Views Of OS		
2.	Process Management	06 Hours	10%
	Process, Process Control Block, Process States, Threads, Types of Threads and Dispatching, Concurrent Threads, CPU Scheduling, Protection : Address space, Address Translation		
3.	Inter process Communication	08 Hours	16%

	Race Conditions, Critical Section, Co-operating Thread/ Mutual Exclusion. Hardware Solution, Strict Alternation, and Peterson's Solution. The Producer Consumer Problem, Semaphores, Event Counters, Monitors. Message Passing and Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem.		
4.	Deadlock	06 Hours	16%
	Deadlock Problem, Deadlock Characterization, Deadlock Detection, Deadlock recovery, Deadlock avoidance: Banker's algorithm for single & multiple Resources. Deadlock Prevention.		
5.	Memory Management	08 Hours	20%
	Paging: Principle Of Operation, Page Allocation, H/W Support For Paging. Multiprogramming With Fixed partitions, Segmentation, Swapping. Virtual Memory: Concept, Performance Of Demand Paging, Page Replacement Algorithms, Thrashing and Working Sets.		
6.	Input Output Management	04 Hours	10%
	I/O Devices, Device Controllers, Direct Memory Access. Principles Of Input/output S/W : Goals Of The I/O S/W, Interrupt Handler, Device Driver, Device Independent. I/O Software Disks: RAID levels, Disk Arm Scheduling Algorithm, Error Handling		
7.	File Systems	06 Hours	16%
	File Naming, File Structure, File Types, File Access, File Attributes, File Operations, Memory Mapped Files. Directories: Hierarchical Directory System, Pathnames, Directory Operations. File System Implementation, Contiguous Allocation, Linked List Allocation, Linked List Using Index, Inodes.		
8.	Unix/Linux File System	04 Hours	06%
	Buffer Cache, Inodes, The system calls - ialloc, ifree, namei, alloc and free. Mounting and Unmounting , file systems, Network File systems. EXT file system in linux		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Visualize and understand Operating system functionality and working of OS. Understanding of functionality, services of operating system and differentiate between different types of OS.
-----	--

CO2	Define thread and process. Visualize how processes and threads are managed by the operating systems. Simulate and analyse various process scheduling algorithms. Explain and analyse different Inter process communication techniques
CO3	Describe deadlock and classify detection, recovery, prevention and avoidance algorithms. Test scenarios to report deadlock
CO4	Compare and Evaluate various memory management schemes. Simulate and analyse Memory management algorithms. Identify and describe the role of I/O devices.
CO5	Understand the file systems. Understand the secondary storage and simulate disk scheduling algorithm.
CO6	Understand the basic commands of linux file systems

Course Articulation Matrix:

Recommended Study Material:

❖ Text book:

1. Modern Operating Systems -By Andrew S. Tanenbaum, Third Edition PHI
2. Operating System Concepts Avi Silberschatz, Peter Baer Galvin, Greg Gagne, Ninth Edition, Wiley

❖ Reference book:

1. Operating Systems, D.M. Dhamdhare, TMH
2. Operating Systems Internals and Design Principles, William Stallings, Seventh Edition, Prentice Hall

3. Unix System Concepts & Applications, Sumitabha Das, TMH
4. Unix Shell Programming, Yashwant Kanitkar, BPB Publications

CE256: COMPUTER ORGANIZATION

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	0	-	3	3
Marks	100	00	-	100	

Pre-requisite courses:

- Digital Electronics

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to digital logic Circuit	03
2.	Register Transfer and Microoperations	08
3.	Basic Computer Organization and Design	08
4.	Central Processing Unit	08
5.	Pipeline and Vector Processing	04
6.	Computer Arithmetic	08
7.	Memory Organization	06
	Total hours (Theory) :	45
	Total hours (Lab) :	00
	Total hours :	45

Detailed Syllabus:

1.	Introduction to digital logic Circuit	03 Hours	07%
	Digital Computers, Logic Gates, Combinational Circuits (Half Adder, Full Adder), Flip-Flops(SR, D, JK, T, Edge-Triggered)		
2.	Register Transfer and Microoperations	08 Hours	18%
	Register Transfer Language, Register Transfer, Bus and Memory Transfers; Arithmetic, Logic & Shift Microoperation; Arithmetic Logic Shift Unit		
3.	Basic Computer Organization and Design	08 Hours	18%

	Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Instruction Cycle, Memory Reference Instructions, Input-Output and Interrupt, Complete Computer Description, Design of Basic Computer, Design of Accumulator Logic		
4.	Central Processing Unit	08 Hours	17%
	Introduction, General Register Organization, Stack Organization, Instruction Formats, Addressing Modes, Data Transfer and Manipulation, Program Control, RISC		
5.	Pipeline and Vector Processing	04 Hours	09%
	Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Vector Processing, Array Processors		
6.	Computer Arithmetic	08 Hours	18%
	Introduction: Binary, Octal, Decimal, Hexadecimal representation, Integer Numbers: Sign-Magnitude, 1's complement, 2's complement, Addition and Subtraction, Multiplication Algorithm, Multiplication Algorithm, Division Algorithm, Floating Point Representation and Arithmetic Operations		
7.	Memory Organization	06 Hours	13%
	Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Recognize elements of digital logic circuit. Moving from design of single bit function to multibit function. (Flip flop, Logic Gates, Combinational Circuit). Design circuit for fixed function arithmetic function. Understand the notation of writing register transfer language
CO2	Design and examine the different Arithmetic, Logic and Shift circuit & Design control unit of Arithmetic, Logic and Shift Circuit
CO3	Differentiate and conceptualize instruction and arithmetic level parallelism &

	Identify and compare different methods for computer I/O mechanisms.
CO4	Demonstrate and evaluate computer arithmetic operations on integer and real numbers using hardwired algorithm
CO5	Categorize memory organization and understand functioning of internal cache memory hardware.
CO6	Understand and differentiate n-way set associative memory

Course Articulation Matrix:

CE255: SOFTWARE GROUP PROJECT-II

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	0	4	-	4	2
Marks	0	100	-	100	

Pre-requisite courses:

- Programming Language, Software Engineering.

Outline of the Course:

- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Students will work together in a team (at most three) with any programming language.
- Students are required to get approval of project definition from the department.
- After approval of project definition students are required to report their project work on weekly basis to the respective internal guide.
- Project will be evaluated at least once per week in laboratory Hours during the semester and final submission will be taken at the end of the semester as a part of continuous evaluation.
- Project work should include whole SDLC of development of software / hardware system as a solution of particular problem by applying principles of Software Engineering.
- Students have to submit project with following listed documents at the time of final submission.
 - d. Final Project Report
 - e. Project Setup file with Source code
 - f. Project Presentation (PPT)
- A student has to produce some useful outcome by conducting experiments or project work.

Total hours (Theory) : 00

Total hours (Lab) : 30

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Identify problems present in society by surveying variety of domains and convert in project definition.
CO2	Explore new ideas and techniques to solve it. Create, select and apply appropriate techniques, resources, modern engineering and IT tools to solve problem.
CO3	Correlate knowledge of different subjects and apply theoretical knowledge to implement project for identified problem.
CO4	Apply ethical principles and commit to responsibilities and norms of the project.
CO5	Write technical report and deliver presentation by applying different visualization tools and evaluation metrics.
CO6	Apply engineering and management principles to achieve project goal.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

HS133 A: CREATIVITY, PROBLEM SOLVING AND INNOVATION

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	--	30/15	--	30/15	2
Marks	--	100	--	100	

Pre-requisite courses:

Creative Problem Solving

<https://www.coursera.org/learn/creative-problem-solving>

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to Creativity, Problem Solving and Innovation	06
2.	Questioning, Learning and Visualization	06
3.	Creative Thinking and Problem Solving	06
4.	Logic, Language and Reasoning	06
5.	Contemporary Issues and Practices in Creativity and Problem Solving	
	Total hours (Theory):	--
	Total hours (Practical):	30
	Total hours (Lab) :	--
	Total hours :	30

Detailed Syllabus:

1.	Introduction to Creativity, Problem Solving and Innovation	06 Hours	20%
	Definitions of Creativity and Innovation, Need for Problem Solving and Innovation, Scope of Creativity in various Domains, Types and Styles of Thinking, Strategies to develop Creativity, Problem Solving and Innovation skills		
2.	Questioning, Learning and Visualization	6 Hours	20%
	Strategy and Methods of Questioning, Asking the Right Questions, Strategy of Learning and its Importance, Sources and Methods of Learning, Purpose and Value of Creativity Education in real life, Visualization strategies - Making thoughts Visible, Mind Mapping and Visualizing Thinking		
3.	Creative Thinking and Problem Solving	6 Hours	20%
	Creative Thinking and its need, Strategy of Thinking Fluency, Generating all Possibilities, SCAMPER Technique, Divergent		

	Vs Convergent Thinking, Lateral Vs Vertical Thinking, Fusion of Ideas for Problem Solving, Applying strategies for Problem Solving		
4.	Logic, Language and Reasoning	6 Hours	20%
	Basic Concepts of Logic, Statement Vs Sentence, Premises Vs Conclusion, Concept of an Argument, Functions of Language: Informative, Expressive and Directive, Inductive Vs Deductive Reasoning, Critical Thinking & Creativity, Moral Reasoning		
5.	Contemporary Issues and Practices in Creativity and Problem Solving	6 Hours	20%
	Cognitive Research Trust Thinking for Creatively Solving Problems, Case Study on Contemporary Issues and Practices in Creativity and Problem Solving		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Demonstrate creativity in their day to day activities and academic output.
CO2	Solve personal, social and professional problems with a positive and an objective mindset.
CO3	Think creatively and work towards problem solving in a strategic way.
CO4	Initiate new and innovative practices in their chosen field of profession.

Course Articulation Matrix:

SYLLABI

(Semester – 5)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CE341: MICROPROCESSOR ARCHITECTURES AND ASSEMBLY PROGRAMMING

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Digital Electronics
- Data Communication

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	The Processor: 8086	06
2.	8086 Instruction set and Assembler Directives	06
3.	The Art of Assembly Language Programming with 8086	06
4.	Special Architectural features and related Programming	06
5.	DMA Controllers, Multi-microprocessor systems	03
6.	80286 Processor	07
7.	80386 Processor	07
8.	Current Era of Microprocessors	04
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	THE PROCESSOR: 8086	05 Hours	10%
	Register Organisation of 8086, Architecture, Signal Descriptions, Physical Memory Organisation, General Bus Operation, I/O Addressing Capability, Special Purpose Activities, Minimum & Maximum Modes 8086 System and Timings.		
2.	8086 INSTRUCTION SET AND ASSEMBLER DIRECTIVES	10 Hours	20%
	Machine Language Instruction Formats, Addressing Modes, Instruction Set, Assembler Directives and Operators		

3.	THE ART OF ASSEMBLY LANGUAGE PROGRAMMING WITH 8086	15 Hours	30%
	A Few Machine Level Programs, Machine Coding the Programs, Programming with an Assembler, Assembly Language Example Programs		
4.	SPECIAL ARCHITECTURAL FEATURES AND RELATED PROGRAMMING	10 Hours	20%
	Introduction to Stack, Stack Structure, Interrupt and Interrupt Service Routines, Interrupt Cycle of 8086, Non-Maskable Interrupt, Maskable Interrupt, Interrupt Programming, MACROS, Timing and Delays.		
5.	DMA CONTROLLER, MULTIMICROPROCESSOR SYSTEMS	10 Hours	20%
	DMA Controller, Interconnection Topologies, Software Aspects of Multi-microprocessor Systems, Tightly Coupled and Loosely Coupled Systems		
6.	80286 PROCESSOR	07 Hours	17%
	Salient Features of 80286, Internal Architecture of 80286, Signal Description of 80286, Real Addressing Mode, Protected Virtual Address Mode (PVAM)		
7.	80386 PROCESSOR	07 Hours	17%
	Salient Features of 80386DX, Architectural and Signal Descriptions of 80386, Register Organisation of 80386, Addressing Modes, Data Types of 80386, Real Address Mode of 80386, Protected Mode of 80386, Segmentation.		
8.	CURRENT ERA OF MICROPROCESSORS	04 Hours	06%
	Core i3, i5, i7, xen Processor, multi core processors.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Recognize elements of digital logic circuit. Moving from design of single bit function to multibit function. (Flip flop, Logic Gates, Combinational Circuit). Design circuit for fixed function arithmetic function. Understand the notation of writing register transfer language.
CO2	Design and examine the different Arithmetic, Logic and Shift circuit & Design control unit of Arithmetic, Logic and Shift Circuit.
CO3	Differentiate and conceptualize instruction and arithmetic level parallelism & Identify and compare different methods for computer I/O mechanisms.
CO4	Demonstrate and evaluate computer arithmetic operations on integer and real

	numbers using hardwired algorithm.
CO5	Categorize memory organization and understand functioning of internal cache memory hardware.
CO6	Understand and differentiate n-way set associative memory.

Course Articulation Matrix:

CE342: DESIGN & ANALYSIS OF ALGORITHMS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Data Structure and Algorithms
- Programming language

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	To derive time and space complexity of algorithm.	03
2.	Analysis of Algorithm	06
3.	Greedy Algorithm	07
4.	Divide and Conquer Algorithm	07
5.	Dynamic Programming	08
6.	Exploring Graphs	04
7.	Backtracking & Branch & Bound	05
8.	String Matching and Introduction to NP- Completeness	05
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Basics of Algorithms and Mathematics	03 Hours	05%
	What is an algorithm?, Performance Analysis, Model for Analysis- Random Access Machine (RAM), Primitive Operations, Time Complexity and Space Complexity		
2.	Analysis of Algorithm	06 Hours	14%
	The efficiency of algorithm, average and worst case analysis, elementary operation, Asymptotic Notation, Analysing control statement, Analysing Algorithm using Barometer, Solving recurrence Equation, Sorting Algorithm		

3.	Greedy Algorithm	07 Hours	16%
	General Characteristics of greedy algorithms, Problem solving using Greedy Algorithm Making change problem Graphs: Minimum Spanning trees (Kruskal's algorithm, Prim's algorithm), Graphs: Shortest paths; The Knapsack Problem; Job Scheduling Problem		
4.	Divide and Conquer Algorithm	07 Hours	16%
	Multiplying large Integers Problem, Binary Search Sorting (Merge Sort, Quick Sort), Matrix Multiplication, Exponential		
5.	Dynamic Programming	08 Hours	18%
	Introduction, The Principle of Optimality, Problem Solving using Dynamic Programming – Calculating the Binomial Coefficient, Making Change Problem, Assembly Line-Scheduling Knapsack Problem, Shortest Path Matrix Chain Multiplication, Longest Common Subsequence		
6.	Exploring Graphs & Backtracking	04 Hours	09%
	An introduction using graphs and games, Traversing Trees – Preconditioning Depth First Search- Undirected Graph; Directed Graph, Breath First Search, Applications of BFS & DFS		
7.	Backtracking & Branch & Bound	05 Hours	12%
	Backtracking –The Knapsack Problem; The Eight queens problem, General Template, Brach and Bound –The Assignment Problem; The Knapsack Problem, The min-max principle		
8.	String Matching and Introduction to NP-Completeness	05 Hours	10%
	The naïve string matching algorithm, The Rabin-Karp algorithm, The class P and NP Problem, Polynomial reduction, NP- Completeness Problem, NP-Hard problems		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Analyse the asymptotic performance of algorithms.
CO2	Derive time and space complexity of different sorting algorithms and compare them to choose application specific efficient algorithm.
CO3	Understand and analyse the problem to apply design technique from divide and conquer, dynamic programming, backtracking, branch and bound techniques and understand how the choice of algorithm design methods impact the performance of programs.
CO4	Understand and apply various graph algorithms for finding shortest path and minimum spanning tree.
CO5	Synthesize efficient algorithms in common engineering design situations.
CO6	Understand the notations of P, NP, NP-Complete and NP-Hard.

Course Articulation Matrix:

CE343: SOFTWARE ENGINEERING

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- N/A

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to Software and Software Engineering	04
2.	Agile Development	04
3.	Managing Software Project	05
4.	Requirement Analysis and Specification	04
5.	Software Design	05
6.	Software Coding & Testing	06
7.	Quality Assurance and Management	05
8.	Software Maintenance and Configuration Management	05
9.	Introduction to SaaS	03
10.	Advanced Topics in Software Engineering	04
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction to Software and Software Engineering	04 Hours	09%
	The Evolving Role of Software, Software: A Crisis on the Horizon and Software Myths, Software Engineering: A Layered Technology, Software Process Models, The Linear		

	Sequential Model, The Prototyping Model, The RAD Model, Evolutionary Process Models, Agile Process Model, Component-Based Development, Process, Product and Process		
2.	Agile Development	04 Hours	09%
	Agility and Agile Process model, Extreme Programming, Other process models of Agile Development and Tools		
3.	Managing Software Project	05 Hours	11%
	Software Metrics (Process, Product and Project Metrics), Software Project Estimations, Software Project Planning (MS Project Tool), Project Scheduling & Tracking, Risk Analysis & Management(Risk Identification, Risk Projection, Risk Refinement ,Risk Mitigation)		
4.	Requirement Analysis and Specification	04 Hours	09%
	Understanding the Requirement, Requirement Modeling, Requirement Specification (SRS), Requirement Analysis and Requirement Elicitation, Requirement Engineering		
5.	Software Design	10 Hours	20%
	Design Concepts and Design Principal, Architectural Design, Component Level Design (Function Oriented Design, Object Oriented Design) (MS Visio Tool), User Interface Design, Web Application Design		
6.	Software Coding & Testing	06 Hours	13%
	Coding Standard and coding Guidelines, Code Review, Software Documentation, Testing Strategies, Testing Techniques and Test Case, Test Suites Design, Testing Conventional Applications, Testing Object Oriented Applications, Testing Web and Mobile Applications, Testing Tools (Win runner, Load runner)		
7.	Quality Assurance and Management	05 Hours	11%
	Quality Concepts and Software Quality Assurance, Software Reviews (Formal Technical Reviews), Software Reliability, The Quality Standards: ISO 9000, CMM, Six Sigma for SE,		

	SQA Plan		
8.	Software Maintenance and Configuration Management	05 Hours	11%
	Types of Software Maintenance, Re-Engineering, Reverse Engineering, Forward Engineering, The SCM Process, Identification of Objects in the Software Configuration, Version Control and Change Control		
9.	Introduction to SaaS	03 Hours	07%
	Product Lifetime : Independent Product Vs. Continuous Improvement, Service Oriented Architecture, Cloud Computing, SaaS Architecture		
10.	Advanced Topics in Software Engineering	04 Hours	09%
	Component-Based Software Engineering, Client/Server Software Engineering, Web Engineering, Reengineering, Computer-Aided Software Engineering, Software Process Improvement, Emerging Trends in software Engineering		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand basics about software engineering principles, methods and practices and to analyze software requirement specification Prepare, SRS (Software Requirement Specification) document and SPMP (Software Project Management Plan) document.
CO2	Apply the concept of Functional Oriented and Object Oriented Approach for Software Design, To explain the software design strategies and to apply software measurement and metrics using Function point, Cyclomatic complexity and Halstead software science measures.
CO3	Recognize how to ensure the quality of software product, different quality standards and software review techniques.
CO4	Formulate problem by following Software Testing Life Cycle. Apply various testing techniques and test plan in. Design Manual Test cases for Software Project. Use automation testing tool students will be able to test the software.
CO5	Able to understand modern Agile Development and Service Oriented Architecture Concept of Industry.

CO6	Analyze software risk with estimation parameters such as cost, effort, schedule/duration and understand the concepts of software maintenance, reengineering, reverse engineering, software configuration management.

CE344: COMPUTER NETWORKS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Data Communication and Networking

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to Computer Networks	04
2.	Data Link Layer	08
3.	Medium Access Control Sub Layer	10
4.	Network Layer	12
5.	Transport Layer	08
6.	Application Layer	03
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction to Computer Networks	04 Hours	09%
	Uses of computer network, network hardware, network software, OSI model, TCP/IP model, Comparison of OSI and TCP/IP model, Example network		
2.	Data Link Layer	08 Hours	18%
	Design Issues, framing, error control, flow control, Error detection and correction, Elementary data link protocols, simplex, stop and wait, sliding window protocol, HDLC		
3.	Medium Access Control Sub Layer	10 Hours	22%
	The channel allocation problem, Multiple Access protocols: ALOHA, CSMA, Collision Free Protocols, Limited		

	Contention Protocols, Wavelength Division Multiple Access Protocols, Wireless LAN protocols; Ethernet: Traditional Ethernet, Switched Ethernet, Fast Ethernet, Gigabit Ethernet, IEEE 802.2: LLC, Data link layer switching		
4.	Network Layer	12 Hours	27%
	Implementation of connection oriented and connection less service, Comparison of virtual circuit and datagram subnets, Routing algorithms, Shortest path routing, Flooding, Distance vector routing, Link state routing, Hierarchical routing, Broadcast routing, Multicast routing, Routing for mobile host, Routing in ad hoc network, Congestion control algorithms principles, Prevention policies, Congestion control in virtual circuit subnets, Congestion control in datagram subnets, Load shedding, virtual circuit, Connectionless internetworking, Tunneling, Internetwork routing and fragmentation, The network layer in the internet: The IP protocol, IP addresses, Internet control protocol, OSPF, BGP.		
5.	Transport Layer	08 Hours	18%
	The transport service: Services provided to the upper layers, Transport service primitives, Socket elements of transport protocols addressing, Connection establishment, Connection release, Flow control, Multiplexing, Crash recovery the transport protocol: UDP, TCP.		
6.	Application Layer	03 Hours	06%
	DNS: The DNS name space, Resource records, Name servers, Electronic mail: Architecture and services, World Wide Web: Architectural overview, HTTP.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Analyze layered network architecture and passage of data over communication links
-----	---

CO2	Analyze delay models in Data Networks using Queueing Systems for messaging and delay sensitive applications
CO3	Design and analyze routing algorithms for Internet and multi-hop autonomous networks
CO4	Analyze flow and rate control algorithms between a sender and receiver in wide area networks
CO5	Apply the network fundamentals to analyze performance.
CO6	Use key networking algorithms in simulation.

CE371: ADVANCED JAVA PROGRAMMING (PE-I)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	2	4	0	6	4
Marks	100	100	0	200	

Pre-requisite courses:

- Object oriented Language – Java
- DBMS
- Web Programming

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	JDBC Programming	05
2.	Servlet	06
3.	Java Server Pages	05
4.	Java Server Faces 2.0	03
5.	Hibernate	05
6.	JAVA web Frameworks: Spring MVC	06
	Total hours (Theory) :	30
	Total hours (Lab) :	60
	Total hours :	90

Detailed Syllabus:

1.	JDBC Programming	05 Hours	11 %
	The JDBC Connectivity Model, Database Programming: Connecting to the Database, Creating a SQL Query, Getting the Results, Updating Database Data Error Checking, SQLException Class, The SQLWarning Class, Statement Interface, ResultSet Interface, Updatable Result Sets, Executing SQL Queries, ResultSetMetaData, Executing SQL Updates, Transaction Management		

2.	Servlet	06 Hours	13 %
	Overview of Servlet, Servlet Life Cycle, HTTP Methods, Structure and Deployment descriptor, ServletContext and ServletConfig interface, Attributes in Servlet, Request Dispatcher interface, The Filter API: Filter, FilterChain, Filter Config, Cookies and Session Management: Understanding state and session, Understanding Session Timeout and Session Tracking, URL Rewriting		
3.	Java Server Pages	05 Hours	11%
	JSP Overview: The Problem with Servlets, Life Cycle of JSP Page, JSP Processing, JSP Application Design with MVC, Setting Up the JSP Environment, JSP Directives, JSP Action, JSP Implicit Objects, JSP Form Processing, JSP Session and Cookies Handling, JSP Session Tracking, JSP Database Access, JSP Standard Tag Libraries, JSP Custom Tag, JSP Expression Language, JSP Exception Handling, JSP XML Processing		
4.	Java Server Faces 2.0	03 Hours	07%
	Introduction to JSF, JSF request processing Life cycle, JSF Expression Language, JSF Standard Component, JSF Facelets Tag, JSF Converter Tag, JSF Validation Tag, JSF Event Handling and Database Access, JSF Libraries: PrimeFaces		
5.	Hibernate	05 Hours	11%
	Overview of Hibernate, Hibernate Architecture, Hibernate Mapping Types, Hibernate O/R Mapping, Hibernate Annotation, Hibernate Query Language		
6.	Java Web Frameworks: Spring MVC	06 Hours	13%
	Overview of Spring, Spring Architecture, bean life cycle, XML Configuration on Spring, Aspect – oriented Spring Managing Database, Managing Transaction		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Illustrate database access and details for managing information using the JDBC API
-----	--

CO2	Design to map java classes and object associations to relational database tables with hibernate framework.
CO3	Demonstrate web application lifecycle using servlet, and JSP.
CO4	Identify the user interface control and build custom tag library using JSF
CO5	Develop real-world applications using java frameworks and understands about MVC architecture with its application.

Course Articulation Matrix:

CE372: ADVANCED PROGRAMMING USING .NET FRAMEWORK (PE-I)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	2	4	0	6	4
Marks	100	100	00	200	

Pre-requisite courses:

- Basics of Object Oriented Concepts, XML, Database Management System

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to .NET Framework	03
2.	C# Programming	08
3.	ADO.NET	06
4.	ASP.NET	06
5.	Creating and Consuming Web Services	03
6.	Advanced in .NET	04
	Total hours (Theory) :	30
	Total hours (Lab) :	60
	Total hours :	90

Detailed Syllabus:

1.	Introduction to .NET Framework	03 Hours	10%
	.NET framework Architecture, MSIL, CLR, CLS, CTS, Garbage Collection, Side by Side executing and Versioning, Application Domain and Assemblies, Namespace and Based Class Library, The End to DLL Hell - Managed Execution.		
2.	C# Programming	08 Hours	26%
	Basics: Types, Variables, Methods, Operators, Branching, Expression, Statements, Structs, Array, Enums. OOP: Classes and Object, Inheritance and Polymorphism, Operator Overloading, Interface, Delegates and Event, Exception handling, Generics and Collections, Multithreading, String Manipulation and Reflection API, Windows Application:		

	Menus–Dialogs – ToolTips, Windows Form Control, GDI+, Visual Inheritance in C#.		
3.	ADO.NET	06 Hours	20%
	Introduces the basic ADO.NET objects and their roles, Connection-based programming to perform live record updates, insert and deletion, Interaction with stored procedures and parameterized command,ADO.NET Disconnected Approach: DataSet, DataTable, Data View and Data Adaptor		
4.	ASP.NET	06 Hours	20%
	Basics: Introduction to ASP.NET, Working with Web and HTML Controls, Using Rich Server Controls, Login controls, Overview of ASP.NET Validation Controls, Complex Validators, Themes and Master Pages, Controls: Standard, Data, Grid View, Data List, List View, Tree View, Repeater, List-Bound State Management: Preserving State in Web Applications and Page-Level State, Cookies, Session, Application, Global. asax file		
5.	Creating and Consuming Web Services	03 Hours	10%
	The Motivation for Web Services, Role of XML for creating SOAP based Web Service, Understanding SOAP, WSDL and UDDI,Creating and Consuming RESTful (Representational State Transfer) web services using WCF		
6.	Advanced in .NET	04 Hours	14%
	Introduction to Windows Presentation Foundation (WPF),Introduction to MVC Framework, Comparison between MVCs,Introduction to Entity Framework (ORM),Introduction to Microsoft Azure Services		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand code solutions and compile C# projects within the .NET framework.
CO2	Design and develop professional console and window based .NET application
CO3	Demonstrate knowledge of object-oriented concepts Design user experience and

	functional requirements C#.NET application.
CO4	Construct classes, methods, and assessors, and instantiate objects. Understand and implement string manipulation, events and exception handling within .NET application environment.
CO5	Design and Implement Windows & Web Applications using Windows Forms, ,Web Forms ,Control Library, Advanced UI Programming & Data Binding concepts
CO6	Design and Implement database connectivity using ADO.NET in window based application.

Course Articulation Matrix:

CE373: MOBILE APPLICATION DEVELOPMENTS (PE-I)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	2	4	-	6	4
Marks	100	100	-	200	

Pre-requisite courses:

- Basic Design concept with XML, Database management system.

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Getting an Overview of Android	2
2.	Working with the User Interface Using Views and View Groups	6
3.	Intents and Fragments in Android	4
4.	Database Connectivity	3
5.	Introduction to Xcode and InterfaceBuilder for iOS	3
6.	Model Development with Swift	6
7.	Intro to Scrollable Views, Tabs and Pages	3
8.	Displaying and Persisting Data	3
	Total hours (Theory) :	30
	Total hours (Lab) :	60
	Total hours :	90

Detailed Syllabus:

1.	Getting an Overview of Android	02 Hours	08%
	Android OS Architecture, Introducing Development Framework, Dalvik Virtual Machine – DVM, Android Virtual Device and SDK Manager, Developing and Executing the First Android Application, Android Activities- Creating an Activity, Managing the Lifecycle of an Activity,		
2.	Working with the User Interface Using Views and	06 Hours	18%

	ViewGroups		
	Working with Views- Text, EditText, Button, Radio Button, CheckBox, ImageButton, ToggleButton, RatingBar, Working with View Groups- LinearLayout, RelativeLayout, ConstraintLayout, ScrollView, Table, Frame, Table with ActionBar, Binding Data with the AdapterView Class- ListView, Spinner, GalleryView, Creating Menus & Dialogs		
3.	Intents and Fragments in Android	04 Hours	14%
	Intent Objects, Intent Filters, Linking the Activities Using Intent, Obtaining Results from Intent, Passing Data Using an Intent Object, Fragments- Fragment Implementation, Finding Fragments, Adding, Removing, and Replacing Fragments		
4.	Database Connectivity	03 Hours	09%
	SQLite Database, SQLite Data Types, Cursors and Content Values, SQLite Open Helper, Adding, Updating and Deleting Content, XML & JSON Based Web Services.		
5.	Introduction to Xcode and InterfaceBuilder for iOS	03 Hours	09%
	Xcode Intro: Demo of a basic iOS App, StoryBoards, Source files, & wiring them together, The View hierarchy and view attributes		
6	Model Development with Swift	06 Hours	18%
	Swift language essentials: Arrays, Dictionaries, functions, Optionals, Control Flow, Structs Enums and Classes, Playgrounds, Elements of The Swift Foundation classes, CocoaTouch Foundation Framework, Simple connections to the User Interface		
7	Intro to Scrollable Views, Tabs and Pages	03 Hours	14%
	Frames and Bounds, ScrollViews, TableViews, CollectionViews and their controllers, Tabbed Views and their controllers, PageController		
8	Displaying and Persisting Data	03 Hours	10%
	Using the Table View, Application Preferences, Database Storage Using SQLite		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand various technologies and business trends impacting mobile applications
CO2	Apply a deep knowledge of mobile device, features, architecture and android functionality.
CO3	Analyse and implement frameworks, database and design patterns in Mobile Applications
CO4	Create a small but realistic working mobile application using features such as data persistence and data communications
CO5	Create a mobile application using the Swift programming language.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CE345: SOFTWARE GROUP PROJECT-II

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	0	4	-	4	2
Marks	0	100	-	100	

Pre-requisite courses:

- Programming Language, Software Engineering.

Outline of the Course:

- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Students will work together in a team (at most three) with any programming language.
- Students are required to get approval of project definition from the department.
- After approval of project definition students are required to report their project work on weekly basis to the respective internal guide.
- Project will be evaluated at least once per week in laboratory Hours during the semester and final submission will be taken at the end of the semester as a part of continuous evaluation.
- Project work should include whole SDLC of development of software / hardware system as a solution of particular problem by applying principles of Software Engineering.
- Students have to submit project with following listed documents at the time of final submission.
 - g. Project Synopsis
 - h. Software Requirement Specification
 - i. SPMP
 - j. Final Project Report
 - k. Project Setup file with Source code
 - l. Project Presentation (PPT)

- A student has to produce some useful outcome by conducting experiments or project work.

Total hours (Theory) : 00

Total hours (Lab) : 60

Total hours : 60

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	An ability to function effectively in teams to accomplish a common goal.
CO2	An ability to apply knowledge of computing and engineering to evaluate project requirements.
CO3	An ability to design, implement and evaluate a computer-based system, process, component, or program to meet desired needs.
CO4	An ability to analyze the local and global impact of computing on individuals, organizations, and society.
CO5	Write technical report and deliver presentation by applying different visualization tools and evaluation metrics.
CO6	An ability to communicate effectively with end user.

Course Articulation Matrix:

CE346: SUMMER INTERNSHIP-I

Credits and Hours:

Teaching Scheme	Project	Practical	Tutorial	Total	Credit
Hours	90	-	-	90	3
Marks	150	-	-	150	

Outline of the Course:

1.	Instructional Method and Pedagogy
	• Summer internship shall be at least 90 hours during the summer vacation only. • Department/Institute will help students to find an appropriate company/industry/organization for the summer internship. • The student must fill up and get approved a Summer Internship Acceptance form by the company and provide it to the Coordinator of the department within the specified deadline. • Students shall commence the internship after the approval of the department Coordinator. Summer internships in research centers is also allowed. • During the entire period of internship, the student shall obey the rules and regulations of the company/industry/organization and those of the University. • Due to inevitable reasons, if the student will not able to attend the internship for few days with the permission of the supervisor, the department Coordinator should be informed via e-mail and these days should be compensated later. • The student shall submit two documents to the Coordinator for the evaluation of the summer internship: • Summer Internship Report • Summer Internship Assessment Form • Upon the completion of summer internship, a hard copy of “Summer Internship Report” must be submitted through the presentation to the Coordinator by the first day of the new term. • The report must outline the experience and observations gained through practical internship, in accordance with the required content and the format

	described in this guideline. Each report will be evaluated by a faculty member of the department on a satisfactory/unsatisfactory basis at the beginning of the semester. • If the evaluation of the report is unsatisfactory, it shall be returned to the student for revision and/or rewriting. If the revised report is still unsatisfactory the student shall be requested to repeat the summer internship.
2.	Format of Summer Internship Report
	The report shall comply with the summer internship program principles. Main headings are to be centered and written in capital boldface letters. Sub-titles shall be written in small letters and boldface. The typeface shall be Times New Roman font with 12pt. All the margins shall be 2.5cm. The report shall be submitted in printed form and filed. An electronic copy of the report shall be recorded in a CD and enclosed in the report. Each report shall be bound in a simple wire vinyl file and contain the following sections: • Cover Page • Page of Approval and Grading • Abstract page: An abstract gives the essence of the report (usually less than one page). Abstract is written after the report is completed. It must contain the purpose and scope of internship, the actual work done in the plant, and conclusions arrived at. • TABLE OF CONTENTS (with the corresponding page numbers) • LIST OF FIGURES AND TABLES (with the corresponding page numbers) • DESCRIPTION OF THE COMPANY/INDUSTRY/ORGANISATION: Summarize the work type, administrative structure, number of employees (how many engineers, under which division, etc.), etc. Provide information regarding • Location and spread of the company • Number of employees, engineers, technicians, administrators in the company • Divisions of the company • Your group and division

	• Administrative tree (if available) • Main functions of the company • Customer profile and market share • INTRODUCTION: In this section, give the purpose of the summer internship, reasons for choosing the location and company, and general information regarding the nature of work you carried out. • PROBLEM STATEMENT: What is the problem you are solving, and what are the reasons and causes of this problem. • SOLUTION: In this section, describe what you did and what you observed during the summer internship. It is very important that majority of what you write should be based on what you did and observed that truly belongs to the company/industry/organization. • CONCLUSIONS: In the last section, summarize the summer internship activities. Present your observations, contributions and intellectual benefits. If this is your second summer internship, compare the first and second summer internships and your preferences. • REFERENCES: List any source you have used in the document including books, articles and web sites in a consistent format. • APPENDICES: If you have supplementary material (not appropriate for the main body of the report), you can place them here. These could be schematics, algorithms, drawings, etc. If the document is a datasheet and it can be easily accessed from the internet, then you can refer to it with the appropriate internet link and document number. In this manner you don't have to print it and waste tons of paper.
	Total hours (Project) : 90
	Total hours : 90

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Ability to integrate existing and new technical knowledge for industrial application.
-----	---

CO2	Executing work with team and teammates from other disciplines
CO3	Get practices and experience related to professional and ethical issues in the work environment
CO4	Experience of demonstrating the impact of the internship on their learning and professional development.
CO5	Understanding of lifelong learning processes through critical reflection of internship experiences.

HS 124 A: PROFESSIONAL COMMUNICATION

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	--	30/15	--	30/15	02
Marks	--	100	--	100	

Pre-requisite courses:

- Communicative English

Detailed Syllabus:

Module No.	Title/Topic	Classroom Contact Sessions
1	An Introduction Professional Communication • <i>Concept & Applications of Professional Communication</i> • <i>Rhetoric in Professional Communication</i> • <i>Importance of Ethos, Logos, and Pathos in Professional Communication</i>	03
2	Cross-cultural Communication and Globalization • <i>Basic Concepts: Culture, Globalization and Cross-cultural Communication</i> • <i>Social and People Skills</i> • <i>Communicating with People of Different Cultures</i> • <i>Conflicts in Cross-cultural Communication and Tactics / techniques to resolve them</i>	08
3	Group Discussion and Personal Interviews • <i>Cover Letters and Resume</i> • <i>Styles, Formats and Content of Cover Letters</i> • <i>Types of Resume</i> • <i>Concept and Rationale of Group Discussion</i> • <i>Skills and Aspects assessed in Group Discussion</i> • <i>Concept and Rationale of Personal Interview</i> • <i>Types of Personal Interview</i>	10

4	Group Dynamics and Leadership • <i>An Introduction to Group Dynamics and Leadership</i> • <i>Groups and their Structures</i> • <i>Roles and Functions of Members in Groups</i> • <i>Leading a Group</i> • <i>Types of Leadership/Leaders</i> • <i>Roles and Functions of a Leader</i> • <i>Characteristics of an effective Leader</i>	05
5	Statement of Purpose (SOP) • Concept and Rationale of Statement of Purpose • Statement of Purpose as a part of Selection Process • Types, Format and Nature of Statement of Purpose • Content and Process of Statement of Purpose	04
Total		30

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Gain basic conceptual understanding of communication skills in Professional settings
CO2	Develop awareness and competence in communicating across cultures in professional settings
CO3	Develop confidence and competence in speaking in formal interviews and to make formal presentations
CO4	Develop necessary soft skills to work collaboratively in a group and participate in a group Discussion for employment and in the workplace.
CO5	Develop team and group dynamics to work well in multi-disciplinary and cross-cultural work environment.
CO6	Develop writing skills to prepare CV's, Resumes, Statement of Purpose and preparation of other formal documents.

B.Tech. (Computer Engineering) Programme

SYLLABI (Semester – 6)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CE347: INTERNALS OF OPERATING SYSTEM

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Operating System

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to the Kernel	03
2.	Kernel Memory Allocation	06
3.	Internal Representation of Files	10
4.	The Structure of Processes	06
5.	Process Control	06
6.	Memory Management Policies	04
7.	Interprocess Communication	03
8.	Distributed File Systems	02
9.	Introduction to System Administration	03
10.	Case Study: RTOS, Network Operating System	02
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction to the Kernel	03 Hours	06%
	Architecture of the Linux/Unix Operating System, Introduction to system concepts, kernel data structures, system administration		
2.	Kernel Memory Allocation	06 Hours	11%
	Introduction, Functional Requirements, Resource Map		

	Allocator, The McKusick-Karels Allocator, The buddy system, The SVR4 lazy buddy algorithm		
3.	Internal Representation of Files	10 Hours	18%
	Buffer headers, Structure of the Buffer Pool, Scenarios for Retrieval of a Buffer, Reading and Writing Disk Blocks, Inodes, Structure Of A Regular File, Directories, Conversion Of A Path Name To An Inode, Super Block, Node Assignment To A New File, Allocation Of Disk Blocks, Other File Types		
4.	The Structure of Processes	06 Hours	15%
	Process States and Transactions, Layout of System Memory, The Context of a Process, Saving the Context of a Process, Manipulation of the Process Address Space, Sleep		
5.	Process Control	06 Hours	16%
	Process Creation, Signals, Process Termination, Awaiting Process Termination, Invoking other Programs, The User ID of a Process, Changing the Size of a Process, The SHELL, System Boot and INIT process		
6.	Memory Management Policies	04 Hours	08%
	Swapping, Demand Paging, A Hybrid system with Swapping and Demand Paging		
7.	Interprocess Communication	03 Hours	06%
	Process Tracing, System V IPC, Network Communications, Sockets		
8.	Distributed File Systems	02 Hours	05%
	General Characteristics Of Distributed File System, Network File System, Remote File System		
9.	Introduction to System Administration	03 Hours	10%
	Basics of System Administration		
10.	Case Study: RTOS, Network Operating System	02 Hours	05%

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Describe an overview of Kernel architecture and outlining basic concepts of file subsystem and process, Discover various functionalities of Kernel and apply basic understanding of kernel in subsequent modules.
CO2	Compare and Contrast Various Kernel memory allocators based on evaluation criteria and Discuss memory management policies and test the performance on various paging algorithms.
CO3	Examine internal structure of file and develop lower level file system algorithms.
CO4	Interpret and formulate context of a process theoretically and programmatically, examine how one process traces and controls the execution of other process and implement system calls that control the process context.
CO5	Review the traditional methods by which process communicate with processes on other machines over a network and to Summarize the characteristics of Distributed File system to conclude strength and weakness of network file systems.
CO6	Describe basics of system administration in operating system and Apply various operating system concepts to understand case study of RTOS and Network Operating system.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

15.	Security at the Network Layer: IPSec	04
	Total hours (Theory) :	60
	Total hours (Lab) :	30
	Total hours :	90

Detailed Syllabus:

1.	Introduction	02 Hours	06%
	Security Goals, Attacks, Services and Mechanism and Techniques.		
2.	Traditional Symmetric-Key Ciphers	05 Hours	10%
	Introduction, Substitution Cipher, Transposition Cipher, Stream and Block Cipher		
3.	Introduction to Modern Symmetric-Key Ciphers	04 Hours	06%
	Modern Block Cipher, Modern Stream Cipher		
4.	Data Encryption Standard (DES)	04 Hours	05%
	Introduction, DES structure and Analysis, Multiple DES		
5.	Advanced Encryption Standard (AES)	04 Hours	05%
	Introduction, AES structure and Analysis		
6.	Encipherment Using Modern Symmetric-Key Ciphers	04 Hours	06%
	Use of Modern Block Ciphers, Use of Modern Stream Ciphers		
7.	Asymmetric-Key Cryptography	05 Hours	10%
	Introduction, RSA Cryptosystem, RABIN Cryptosystem, ELGAMAL Cryptosystem		
8.	Message Integrity and Message Authentication	04 Hours	08%
	Message Integrity, Message Authentication		
9.	Cryptographic Hash Functions	04 Hours	08%
	Introduction, SHA-512,MD5		
10.	Digital Signature	04 Hours	06%
	Services,RSA Digital Signature Scheme,ELGamal Digital Signature Scheme		
11.	Entity Authentication	04 Hours	04%
	Passwords, Challenge –Response,Zero –Knowledge		
12.	Key Management	04 Hours	08%
	Symmetric-Key Distribution,KERBEROS		
13.	Security at the Application Layer: PGP and S/MIME	04 Hours	06%
	E-Mail, PGP,S/MIME		

14.	Security at the Transport Layer: SSL and TLS	04 Hours	06%
	SSL Architecture,TLS cipher suite		
15.	Security at the Network Layer: IPSec	04 Hours	06%
	Introduction to IPSec		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Define various security goal and understand the security policies such as the CIA triad of Confidentiality, Integrity and Availability.
CO2	Classify various forms of security attacks, where they arise, and appropriate tools or mechanism to quantify them.
CO3	Illustrate a basic understanding of cryptography, how it has evolved, and evaluate symmetric key encryption techniques used today.
CO4	Distinguish modern symmetric encryption standard, key distribution scenario and analyse effectiveness in todays' environment.
CO5	Evaluate Asymmetric key encryption techniques, key distribution scenario and calculate public and private components of asymmetric key encryption techniques.
CO6	Develop message integrity and message authentication of message digest.

CE349: THEORY OF COMPUTATION

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	-	-	3	3
Marks	100	-	-	100	

Pre-requisite courses:

- Mathematics, Data Structures and Algorithms, Design and Analysis of Algorithm (Computational Complexity)

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1	Introduction	03
2	Mathematical Terms and Theory	05
3	Regular Grammar & Languages, Regular Expression, Finite Automata	14
4	Context Free Grammar & Languages, Push down Automata	13
5	Turing Machine, Recursively Enumerable Languages	08
6	Decidable & Undecidable Problems	02
	Total hours (Theory) :	45
	Total hours (Lab) :	00
	Total hours :	45

Detailed Syllabus:

1.	Introduction	03 Hours	06 %
	Alphabet, String, Language, Formal Grammar, Chomsky Hierarchy, Introduction to Automata		
2.	Mathematical Terms and Theory	05 Hours	10 %
	Mathematical Inductions, Recursive Definitions		
3.	Regular Grammar & Languages, Regular Expression, Finite Automata	14 Hours	32 %

	Regular Language, Regular Expressions, Applications, Chomsky Hierarchy, Finite Automata, Nondeterministic Finite Automata, Kleen's Theorem, Automata with Output (Moore Machine, Mealy Machine), Properties of Regular Languages (Pumping Lemma, Closure Property, Decision Algorithm)		
4.	Context Free Grammar & Languages, Push down Automata	13 Hours	30 %
	The Chomsky, Notion of Grammars and Languages Generated by Grammars, CFG, CFL, Regular Language and Regular Grammar, Derivation Tree and Ambiguity, BNF, CNF, GNF, CFL properties (Pumping Lemma, Closure Property, Decision Algorithm), Intersections and Complements of CFL, Non-CFL, Definition, DPDA, NPDA, Equivalence of CFG and PDA		
5.	Turing Machine, Recursively Enumerable Languages	10 Hours	20%
	Definition, Model of Computation, Combining TM, Variations of TM, Non Deterministic TM, Universal TM, Recursively Enumerable and Recursive, Enumerable Languages, Context sensitive languages		
6.	Decidable & Undecidable Problems	02 Hours	04 %
	Tractable and Intractable Problems, Complexity Classes, Tractable and Possibly Intractable Problems, P and NP Completeness, Countability		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Apply basic concepts of theory of computation in the computer field in order to solve computational problems.
CO2	Construct algorithms for different problems and argue formally about correctness on different restricted machine models of computation.
CO3	Analyze and design finite automata, pushdown automata and Turing machine for

	formal languages.
CO4	Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata.
CO5	Identify limitations of some computational models and possible solutions.
CO6	Design context free grammars for formal languages.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	1	-	-	-	-	-	-	-	-	-	-	3	-

CE350: DATAWAREHOUSING & DATA MINING

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- A course in database systems is recommended, as is a basic course on algorithms and data structures.

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction to Data Warehousing	06
2.	Concepts and techniques in Data Warehousing	06
3.	Introduction to data mining (DM)	06
4.	Data Pre-processing	08
5.	Concept Description & Association Rule Mining	08
6.	Classification and Prediction	07
7.	Advance topics	04
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Overview and concepts Data Warehousing	06 Hours	14%
	What is data warehousing - The building Blocks, Defining Features – Data warehouses and data marts, Overview of the components, Metadata in the data warehouse, Need for data warehousing, Basic elements of data warehousing, Trends in data warehousing.		
2.	OLAP in Data Warehouse	06 Hours	14%
	OLAP (Online analytical processing) definitions, Difference		

	between OLAP and OLTP, Dimensional analysis - What are cubes?, Drill-down and roll-up - slice and dice or rotation, OLAP models, ROLAP versus MOLAP, defining schemas: Stars, snowflakes and fact constellations		
3.	Introduction to data mining (DM)	06 Hours	14%
	DM Functionalities, Classification of DM Systems, Issues in DM – KDD Process		
4.	Data Pre-processing	08 Hours	18%
	Why to pre-process data?, Data cleaning: Missing Values, Noisy Data, Data Integration and transformation, Data Reduction: Data cube aggregation, Dimensionality reduction, Data Compression, Numerosity Reduction, Data Mining Primitives, Languages and System Architectures: Task relevant data, Kind of Knowledge to be mined, Discretization and Concept Hierarchy.		
5.	Concept Description and Association Rule Mining	08 Hours	18%
	What is concept description? Data Generalization and summarization-based characterization, Attribute relevance class comparisons Association Rule Mining, Market basket analysis- basic concepts, Finding frequent item sets: Apriori algorithm - generating rules		
6.	Classification and Prediction	07 Hours	16%
	What is classification and prediction?, Issues Classification using Decision trees, Linear and nonlinear regression, Introduction of tools such as DBMiner /WEKA DM Tools		
7.	Advance topics	04 Hours	06%
	Introduction of clustering, Spatial mining, Web mining, Text mining, Big Data: Introduction to Big Data and Hadoop, What is Big Data and what are the challenges to process Big Data, What technologies supports Big Data, Hadoop introduction and its history, Hadoop vs RDBMS, Introduction of Hadoop Distributed File System, Introduction of Map-Reduce		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Interpret the contribution of data warehousing and data mining to the decision-support level of organizations.
CO2	Apply pre-processing statistical methods for any given raw data.
CO3	Design and Evaluate different dimensional modelling used for OLAP.
CO4	Categorize and differentiate between situations for applying different data-mining techniques: frequent pattern mining, association, correlation, classification, prediction, cluster, and outlier analysis.
CO5	Evaluate the performance of different data-mining models/algorithms with respect to their accuracy.
CO6	Conceptualise a data mining solution to a practical problem.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	-	-	1	-	-	-	-	-	-	1	2	-
CO2	2	1	2	-	2	-	-	-	-	-	-	1	1	-
CO3	-	2	3	-	3	-	1	-	-	-	-	2	1	2
CO4	2	2	1	2	3	1	2	-	-	-	-	2	2	-
CO5	1	2	2	3	2	-	-	-	-	-	-	1	1	-
CO6	-	2	2	2	2	-	1	-	-	-	-	2	1	-

Enter correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

If there is no correlation, put “-”

Recommended Study Material:

❖ Text Books:

1. “Data Mining Concepts and Techniques”, J. Han, M. Kamber, Morgan Kaufmann
2. “Data Warehousing Fundamentals”, Paulraj Ponnian, John Willey.

❖ **Reference Books:**

1. “Data mining: Concepts, models, methods and algorithms, M. Kantardzic, John Wiley & Sons Inc.
2. “Data Mining: Introductory and Advanced Topics”, M. Dunham, Pearson Education.
3. “Data Mining”, Pieter Adriaans, Dolf Zantinge, Pearson Education Asia

CE374: Service Oriented Computing (PE-II)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- N/A

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Overview of SOA	03
2.	SOA — Architecture Fundamentals	06
3.	Web Services and Contemporary SOA (Part I: Activity Management and Composition)	06
4.	Web Services and Contemporary SOA (Part II:	08
5.	Building SOA (Planning and Analysis)	06
6.	Building SOA (Technology and Design)	10
7.	Fundamental WS-* Extensions	06
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Overview of SOA	03 Hours	07%
	The Promise of SOA, The Challenges of SOA: Reuse, Efficiency in Development, Integration of Applications and Data, Agility, Flexibility, and Alignment.Meeting the Challenge Reference Architecture Common Semantics Governance Business Process Modelling Design-Time		

	Service Discovery Model-Based Development		
2.	SOA — Architecture Fundamentals	06 Hours	13%
	Architectural Styles, Architectural Principles and Practices, SOA and Other Architectures, Enterprise Architecture, Software Architecture, EA, 4+1, and Services, What Is a Service?, Service Characteristics: Service, Granularity, Service Dimensions, Loose Coupling Is King: Location Transparency, Interface and Implementation, Data, Versioning, Interoperability and Platform Independence, Usage, Assumptions, and Knowledge, Common Service Patterns, Service Types and Purpose, SOA Reference Architecture.		
3.	Web Services and Contemporary SOA (Part I: Activity Management and Composition)	06 Hours	13%
	Message exchange patterns, Service activity, Coordination, Atomic transactions, Business activities, Orchestration		
4.	Web Services and Contemporary SOA (Part II:Advanced Messaging, Metadata, and Security	08 Hours	18%
	Addressing, Reliable messaging, Correlation, Policies, Metadata exchange, Security, Notification and eventing		
5.	Building SOA (Planning and Analysis)	06 Hours	13%
	SOA Delivery Strategies: SOA delivery lifecycle phases, The top-down strategy, The bottom-up strategy, Service Modeling: Service modeling guidelines, Classifying service model logic.		
6.	Building SOA (Technology and Design)	10 Hours	23%
	WSDL-related XML Schema language basics, WSDL language basics, SOAP language basics, Composition Guidelines: Steps to composing SOA,Considerations for choosing service layers, Considerationsfor positioning core SOA standardsService Design: Service design overview,		

	Entity-centric business service design (a step-by-step process), Application service design, Task-centric business service design Business Process Design: WS-BPEL language basics, WS-Coordination overview.		
7.	Fundamental WS-* Extensions	06 Hours	13%
	WS-Addressing, WS-Reliable Messaging, WS-Policy, WS-MetadataExchange, WS-Security SOA Platforms: SOA support in J2EE, SOA support in .NET.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Define various promise and challenges of service oriented architecture.
CO2	Classify various forms of architectures, integration and interoperability of architecture principles.
CO3	Illustrate a basic understanding of activity management, how it has evolved, and evaluate composition and message exchanging.
CO4	Classifying delivery life cycle phase and analyse service model logic.
CO5	Evaluate web services using SOAP, WSDL and create application service design.
CO6	Explore platforms such as J2EE and .Net for reliable messaging, security and policies for efficient service discovery.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CE375: DIGITAL IMAGE PROCESSING (PE-II)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Computer Graphics

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Digital Image Fundamentals	04
2.	Spatial Domain Image Enhancement Techniques	06
3.	Frequency Domain Image Enhancement Techniques	05
4.	Image Restoration	04
5.	Colour Image Processing	02
6.	Image Compression	03
7.	Image Segmentation	06
8.	Morphological Image Processing	06
9.	Representation & Description	03
10.	Applications of Image Processing	06
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Digital Image Fundamentals	04 Hours	10%
	Image Basics, Elements of visual perception, Human Eye Structure, Why digital images, The digital camera, Data types and 2d representation of digital images, Application fields of Image Processing, Image Acquisition Techniques, Single Sensor, Strip, Array Sensor, Image sampling and quantization, Discrete sampling model Quantization, Noise processes,		

	Spatial & Grey level resolution, Image attributes, Image Types, Basic relationship between pixels Neighbourhood Adjacency and Distance measures		
2.	Spatial Domain Image Enhancement Techniques	06 Hours	13%
	Intensity based transforms- power law, log ,image negative, Histogram based transforms- Histogram processing, Equalization, Local Enhancement, Specification, Image Averaging, Subtraction, AND-OR-NOT Operations between images, Smoothing Filters- Linear Filters, Order Statistic Filters, Sharpening Filters-Laplacian Filter , Unsharp masking , high boost filtering		
3.	Frequency Domain Image Enhancement Techniques	05 Hours	10%
	Introduction to signal-frequency concept, Discrete Fourier Transform and Inverse Transform, properties of Fourier Transform ,1D Fourier Transform, 2D Fourier Transform, Frequency Filtering Concepts, Smoothing Filters(Low pass Filters)- Ideal low-pass, Butterworth low-pass, Gaussian low-pass filters, Sharpening Filters(High-Pass filters)- Ideal , Butterworth, Gaussian, Laplacian Filter in Frequency domain, Unsharp masking , high boost filtering ,Homomorphic Filtering , Convolution & Correlation Theorem , Fast Fourier Transform		
4.	Image Restoration	04 Hours	10%
	Image Degradation-Restoration Model, Noise Models, Noise probability density functions, Noise estimation parameters, Spatial Domain Restoration- Mean filters – Arithmetic mean, Geometric mean, Harmonic mean Order Statistics Filters- Median filter, Max & min filter, Midpoint filter, Alpha trimmed filter, Adaptive filters, Adaptive local noise filter, Adaptive median filter, Frequency Domain Restoration Techniques- Band reject filter, Band-pass filter, Notch filter, Optimum Notch filter, Estimation of Degradation function-By experiment, By Modeling , Inverse Filtering, Wiener Filtering,		

	Constrained Least Square Filtering, Geometric Mean filter		
5.	Colour Image Processing	02 Hours	03%
	Colour fundamentals , Colour Models, HIS, YIQ, RGB, CMYK, CIE Lab, XYZ, Intensity Slicing, Grey level to Colour Transform, Tone & Colour Correction, Histogram Processing , Smoothing, Sharpening, Segmentation		
6.	Image Compression	03 Hours	10%
	Fundamental to Data Compression, Information Theory, Rate Distortion Theory, Redundancy- Coding, Inter-pixel, psycho-visual redundancy, Fidelity, Image Compression Models, Lossless Compression theorem- Huffman, Arithmetic Coding , LZW, Bit-Plane Coding, Run Length Encoding, Contour Coding, Lossless predictive Coding , Lossy predictive Coding- Transform Coding, DCT, KLT, Wavelet, JPEG Compression, JPEG2000		
7.	Image Segmentation	06 Hours	13%
	Detection of Discontinuities, Point Detection, Line Detection, Edge Detection, Edge Linking and Boundary Detection, Local Processing, Global Processing via the Hough Transform, Global Processing via Graph Theoretic Techniques, Thresholding, Foundation, The Role of Illumination, Basic Global Thresholding, Basic Adaptive Thresholding, Optimal Global and Adaptive Thresholding, Use of Boundary Characteristics for Histogram Improvement and Local Thresholding, Thresholds Based on Several Variables Region, Based Segmentation, Basic Formulation, Region Growing, Region Splitting and Merging, Segmentation by Morphological Watersheds, Basic Concepts, Dam Construction, Watershed Segmentation Algorithm, The Use of Markers		
8.	Morphological Image Processing	06 Hours	13%
	Preliminaries: Some Basic Concepts from Set Theory, Logic Operations		

	Involving Binary Images, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms: Boundary Extraction-, Region Filling, Extraction of Connected Components, Convex Hull, Thinning, Thickening, Skeletons, Pruning		
9.	Representation & Description	03 Hours	07%
	Chain Code, Polygonal Approximation, Signatures, Boundary segments, Skeletons, Shape numbers, Fourier Descriptors, Statistical moments, Regional Descriptors: Topological, Texture, Moments of 2D functions, Using Principle Components		
10.	Applications of Image Processing	06 Hours	14%
	Case Study on the following applications: Digital Water Marking, Biometric authentication (face, fingerprint, signature recognition), Vehicle number plate detection and recognition, Content Based Image Retrieval, Text Compression. Image Mining, Image Fusion.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Examine, explain and analyse different types of images, general terminology and fundamental concepts of digital image processing.
CO2	Interpret, compare and evaluate the techniques for image enhancement, restoration, segmentation, morphological operation, representation and description.
CO3	Interpret different colour models and apply different image processing algorithms on colour images.
CO4	Categorize and analyse various compression techniques.
CO5	Understand real time problems of image processing filed and apply image processing knowledge to solve those problem.

Course Articulation Matrix:

	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12	PSO1	PSO2

CE376: PROGRAMMING IN PYTHON(PE-II)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- High level language (C/C++/Java)
- Web Programming

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Basics of Python	01
2.	Data Structures: Lists, Tuples, Dictionaries and Strings	03
3.	Control structures and Function	03
4.	Modules and Scoping Rules	04
5.	Exceptions Handling	04
6.	Magic Methods, Properties, and Iterators	05
7.	Object Oriented Programming	06
8.	Regular Expression and File Handling	04
9.	Django web Framework	05
10.	Working with Django Templates	05
11.	Working with Django Form	05
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Basics of Python	01 Hours	02 %
	Using the Python Interpreter, Variables, Identifiers and Keywords,		

	Numbers and Expressions		
2.	Data Structures: List, Tuples, Dictionaries and Strings	03 Hours	07 %
	Common Sequence Operations: Indexing, Slicing, Adding Sequences, Multiplication, Membership, Length, Minimum, and Maximum, Using Lists as Stacks, Using Lists as Queues, List Comprehensions, Nested List Comprehensions, The del statement, Tuples and Sequences, Sets, Dictionaries, Comparing Sequences and Other Types, Basic String Operations		
3.	Control Structures and Functions	03 Hours	07%
	Conditional Branching: if Statements, break and continue Statements, and else Clauses on Loops, pass Statements Loops: while Loops, for Loops, Defining Functions, More on Defining Functions: Default Argument Values, Keyword Arguments, Arbitrary Argument Lists, Unpacking Argument Lists, Lambda Expressions, Documentation Strings, Function Annotations		
4.	Modules and Scoping Rules	04 Hours	09%
	Executing modules as scripts, The Module Search Path, “Compiled” Python files, Packages: Importing * From a Package, Intra-package References, Packages in Multiple Directories		
5.	Exception Handling	04 Hours	09%
	Syntax Errors, Exceptions, Handling Exceptions, Raising Exceptions, User-defined Exceptions, Defining Clean-up Actions, Predefined Clean-up Actions		
6.	Magic Methods, Properties and Iterators	05 Hours	11%
	Constructors, Item Access: The Basic Sequence and Mapping Protocol, Properties: The property Function, Static Methods and Class Methods, __getattr__, __setattr__, and Friends, Iterators, Generators, Generator Expressions		
7.	Object Oriented Programming	06 Hours	13%
	Python Scopes and Namespaces, Class Definition, Class Objects, Instance Objects, Method Objects, Class and Instance Variables, Inheritance, Multiple Inheritance, Private Variables, Polymorphism, Using Properties to Control Attribute Access,		

	Creating Complete Fully Integrated Data Types		
8.	Regular Expression and File Handling	04 Hours	09%
	What is a regular expression?, Regular expressions with special characters, Regular expressions and raw strings, Extracting matched text from strings, Substituting text with regular expressions, Writing and Reading Binary Data, Writing and Parsing Text Files, Iterating over File Contents, Writing and Parsing XML Files, Random Access Binary Files		
9.	Introduction to Django Web Framework	05 Hours	11%
	MVC Architecture, Object, Relational Mapping architecture, Django settings: Routing in Django, Views and URL confs		
10	Working with Django Templates	05 Hours	11%
	Injecting the data from the view to the template, Creating dynamic templates, Integrating variables in templates, Filters, Creating DRY URLs, Extending the templates, Using static files in templates.		
11	Working with Django Model and Form	05 Hours	11%
	Model: Databases and Django, Migrations with South, Creating simple models, The relationship between the models, Extending models, The admin module, Model's Data with Query sets, Forms: Adding a developer with/without using Django forms, The form based on a model, Advanced usage of Django forms		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Interpret the fundamental python syntax, semantics and fluent in the use of python control flow statements. Express proficiency in the handling of strings and functions.
CO2	Determine the methods to create and manipulate python programs by utilizing the data structures like lists, dictionaries, tuples and sets.
CO3	Identify the commonly used operations involving file systems and regular expressions.
CO4	Articulate the Object-Oriented Programming concepts such as encapsulation, inheritance and polymorphism as used in Python along with magic methods.
CO5	Develop real-world applications using frameworks and understands about

	database with its application and forms.

CE351: SOFTWARE GROUP PROJECT -III

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	0	4	-	4	4
Marks	0	200	-	200	

Pre-requisite courses:

- Programming Knowledge

Outline of the Course:

- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Students will work together in a team (at most three) with any programming language.
- Students are required to get approval of project definition from the department.
- After approval of project definition students are required to report their project work on a weekly basis to the respective internal guide.
- Project will be evaluated at least once per week in laboratory Hours during the semester and final submission will be taken at the end of the semester as a part of continuous evaluation.
- Project work should include whole SDLC of development of software / hardware system as a solution of particular problem by applying principles of Software Engineering.
- Students have to submit project with following listed documents at the time of final submission.
 - a. Project Synopsis
 - b. Software Requirement Specification
 - c. SPMP
 - d. Final Project Report
 - e. Project Setup file with Source code
 - f. Project Presentation (PPT)

- A student has to produce some useful outcome by conducting experiments or project work.

Total hours (Theory) : 00

Total hours (Lab) : 60

Total hours : 60

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Prepare team formation strategies and stages leading to the development of high performing, self-managing teams.
CO2	Identify and define the computing requirements of a problem to propose its appropriate solution.
CO3	Correlate knowledge of different subjects and apply theoretical knowledge to implement project for identified problem.
CO4	Apply engineering and management principles to achieve project goal.
CO5	Write technical report and deliver presentation by applying different visualization tools and evaluation metrics.
CO6	Recognition of the need for and an ability to engage in continuing professional development.

Course Articulation Matrix:

HS134 A: CONTRIBUTORY PERSONALITY DEVELOPMENT

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	--	30/15	--	30/15	02
Marks	--	100	--	100	

Pre-requisite courses:

- Communication and Soft Skills

Detailed Syllabus:

Module No.	Title/Topic	Classroom Contact Hours
1	Concept of Personality: • Meaning of Personality • Types of Personality • Factors contributing to Personality • Personality Traits	06
2	Soft Skills and Personality Development: • Critical, Creative and Positive Thinking • Leadership, Assertiveness and Negotiation Skills • Self-Management • People's Skills • Building Relationship Skills • Being a Team Player	08
3	Developing Contributor Personality – Part I • Concept of Contributor • Characteristics of a Contributor • The Contributor's Vision of Success & Career • The Scope of Contribution • Embarking on the Journey to Contributor-ship	06
4	Developing Contributor Personality – Part II • Focus on values • Engage deeply • Think in enlightened self-interest • Practice imaginative sympathy • Demonstrate trust behavior • Developing a sense of duty and morality	06

5	Contemporary Issues in CPD - Contemporary Practices & Trends in Contributor Personality Development - Case Study & Presentations	04
	Total	30

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Develop conceptual understanding of the term Personality and understand one's own personality Traits
CO2	Develop soft skills for holistic personality development for career and in personal life
CO3	Develop assertiveness, self-management and negotiation skills to navigate the personal and professional environment successfully
CO4	Develop conceptual clarity of the term 'Contributor Personality' and develop understanding of the traits of a contributor
CO5	Develop the qualities of a contributor such as trust, strong work ethic, responsibility and accountability at workplace
CO6	Develop relevant skills required to be a contributor at workplace and achieve success in life

Course Articulation Matrix:

B. Tech. (Computer Engineering) Programme

SYLLABI (Semester – 7)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CE441: BIG DATA ANALYTICS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	4	0	7	5
Marks	100	100	0	200	

Pre-requisite courses:

- Linux Operating System
- Database Management System

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Big Data and Analytics	02
2.	Data Collection, Sampling and Preprocessing	06
3.	Predictive Analytics, Descriptive Analytics, Survival Analysis	08
4.	Introduction to Hadoop and Hadoop Architecture	08
5.	HDFS, HIVE and HIVEQL, HBASE	08
6.	Apache Spark and MongoDB	08
7.	Big Data Applications and Visualization	05
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Big Data and Analytics	02 Hours	4%
	Introduction to Big Data, Big Data Characteristics, Types of Big Data, Traditional Versus Big Data Approach, Technologies Available for Big Data, Infrastructure for Big Data, Use of Data Analytics, Big Data Challenges.		
2.	Data Collection, Sampling and Preprocessing	06 Hours	13%

	Types of Data Sources Sampling, Types of Data Elements ,Visual Data Exploration and Exploratory Statistical Analysis, Missing Values, Outlier Detection and Treatment, Standardizing Data, Categorization, Weights of Evidence Coding, Variable Selection, Segmentation		
3.	Predictive Analytics, Descriptive Analytics & Survival Analysis	08 Hours	18%
	Predictive Analytics: Target Definition, Linear Regression, Logistic Regression, Decision Trees, Neural Networks, Support Vector Machines, Ensemble Methods, Multiclass Classification Techniques, Evaluating Predictive Models Descriptive Analytics: Association Rules, Sequence Rules, Segmentation Survival Analysis: Survival Analysis Measurements, Kaplan Meier Analysis, Parametric Survival Analysis, Proportional Hazards Regression, Extensions of Survival Analysis Models, Evaluating Survival Analysis Models		
4.	Introduction to Hadoop and Hadoop Architecture	08 Hours	18%
	Big Data – Apache Hadoop & Hadoop EcoSystem, Moving Data in and out of Hadoop – Understanding inputs and outputs of MapReduce -, Data Serialization		
5.	HDFS, HIVE AND HIVEQL, HBASE	08 Hours	18%
	HDFS-Overview, Installation and Shell, Java API; Hive Architecture and Installation, Comparison with Traditional Database, HiveQL Querying Data, Sorting And Aggregating, Map Reduce Scripts, Joins & Sub queries, HBase concepts, Advanced Usage, Schema Design, Advance Indexing, PIG, Zookeeper , how it helps in monitoring a cluster, HBase uses Zookeeper and how to Build Applications with Zookeeper		
6.	Apache Spark, MongoDB and Neo4j	08 Hours	18%
	Introduction to Data Analysis with Spark, Downloading Spark and Getting Started, Programming with RDD, Spark SQL, Spark Streaming. Introduction to MongoDB key features, Core Server tools, MongoDB		

	through the JavaScript's Shell, Creating and Querying through Indexes, Document-Oriented, principles of schema design, Constructing queries on Databases, collections and Documents , MongoDB Query Language		
7.	Graph Analytics and Data Visualization	05 Hours	11%
	Apache Spark GraphX: Property Graph, Graph Operator, SubGraph, Triplet, Neo4j: Modeling data with Neo4j, Cypher Query Language: General clauses, Read and Write clauses. Big Data Visualization with D3.js, Kibana and Grafana		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand the key issues in big data management and its associated applications in intelligent business and scientific computing
CO2	Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
CO3	Interpret business models and scientific computing paradigms and apply software tools for big data analytics.
CO4	Achieve adequate perspectives of big data analytics in various applications like recommender systems and social media applications.
CO5	Evaluate and apply appropriate principles, techniques and theories to large-scale data science problems using various databases with analytics and visualizations.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CE442: DESIGN OF LANGUAGE PROCESSOR

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	2	-	6	5
Marks	100	50	-	150	

Pre-requisite courses:

- Digital Electronics
- Operating System
- Theory of Computation

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Overview of Language Processors & Translators	10
2.	Introduction To Compilers	20
3.	Symbol-Table Management	05
4.	Static & Dynamic Memory Allocation & Memory management	06
5.	Semantic Analysis & Intermediate Code Generation	05
6.	Code Optimization	07
7.	Code Generation	07
	Total hours (Theory) :	60
	Total hours (Lab) :	30
	Total hours :	90

Detailed Syllabus:

1.	Overview of Language Processors & Translators	12 Hours	20%
	Language processing activities, fundamental of language processing, Operating System, Interpreter vs compiler Pre-processor & Macro Processors – Subroutine, Macro definition and call, Macro expression, nested macro call, Advanced macro facilities, design of macro pre-processor Loaders - Compile & go, Absolute, Bootstrap, Relocating, Linking loader		

	Linkers - Relocation of Linking Concept, Design of Linker, Linker for MS DOS, Linking for overlays, Linkage editor Assemblers - Elements of Assembly Language Programming, Assembly Scheme, Single pass Assembler, Two pass assembler, Data structure of Assemblers		
2.	Introduction To Compilers	20 Hours	35%
	Pass and Phases of Compiler, grouping of phases, Compiler Contraction tools Lexical analyser - Roles of lexical analyser, input buffering, tokens, Regular Expression, finite Automata Syntax analyser - Context free grammar, Ambiguous grammar, Top-down parsing, Bottom-up parsing, LEX, YACC		
3.	Symbol-Table Management	02 Hours	05%
	Data structures to implement symbol table, Symbol Attributes, Symbol-Table entries, Local Symbol Table management, Global Symbol Table Structure, Storage bindings and Symbolic Registers		
4.	Static & Dynamic Memory Allocation & Memory management	06 Hours	09%
	Data descriptors - Static and Dynamic storage allocation – Storage allocation and access in block structured programming languages – Array allocation and access- Compilation of expressions – Handling operator priorities – Intermediate code forms for expressions – code generator., Register Usage, The run-time stack, Parameter passing disciplines, Code sharing and Position-Independent code		
5.	Semantic Analysis & Intermediate Code Generation	06 Hours	09%
	Intermediate Languages, Declarations, Assignment Statements, Boolean Expressions, Case Statements, Back patching, Procedure Calls		
6.	Code Optimization	07 Hours	11%
	The Principal Sources of Optimization, Optimization of Basic Blocks, Loops in Flow Graphs, Introduction to Global Data-		

	Flow Analysis, Iterative Solution of Data-Flow Equations, Code-Improving Transformations, Dealing with Aliases, Data-Flow Analysis of Structured Flow Graphs, Efficient Data-Flow Algorithms, A Tool for Data-Flow Analysis, Estimation of Types, Symbolic Debugging of Optimized Code		
7.	Code Generation	07 Hours	11%
	Issues in the Design of a Code Generator, The Target Machine, Run-Time Storage Management, Basic Blocks and Flow Graphs, Next-Use Information, A Simple Code Generator, Register Allocation and Assignment, The DAG Representation of Basic Blocks, Peephole Optimization, Generating Code from DAGs, Dynamic Programming Code-Generation Algorithm, Code-Generator Generators		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand design and processing of different language processor, loaders and linkers
CO2	Design top-down and bottom-up parsers
CO3	Identify different memory management schemes of language processors
CO4	Develop semantic analysis scheme to generate intermediate code
CO5	Apply different code optimization techniques
CO6	Develop algorithms to generate code for a target machine

Course Articulation Matrix:

CE443: Cloud Computing

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Operating System
- Networking

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Cluster Computing, Grid Computing Systems and Resource Management at Glance	08
2.	Fundamental of Virtualization	06
3.	Fundamental Concepts and Models	06
4.	Cloud-Enabling Technology	05
5.	Fundamental Cloud Architectures	07
6.	Advanced Cloud Architectures	08
7.	Implementation of Cloud	05
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Cluster Computing, Grid Computing Systems and Resource Management at Glance	08 Hours	18%
	Introduction, Eras of Computing, Scalable Parallel Computer Architectures, Towards Low Cost Parallel Computing and Motivations , A Cluster Computer and its Architecture, Clusters Classification, Commodity Components for Clusters, Grid Architecture and Service Modelling, Grid Projects and Grid Systems Built, Grid Resource Management		

	and Brokering, Software and Middleware for Grid Computing, Grid Application Trends		
2.	Fundamental of Virtualization	06 Hours	12%
	Structure of Relational Databases, Database Schema, Schema Diagram, Domains , Relations, Relational Query Languages, Relational Operations		
3.	Fundamental Concepts and Models	06 Hours	15%
	Roles and Boundaries, Cloud Characteristics, Cloud Delivery Models, Cloud Deployment Models		
4.	Cloud-Enabling Technology	05 Hours	14%
	Broadband Networks and Internet Architecture, Data centre Technology, Virtualization Technology, Web Technology, Multitenant Technology, Service Technology		
5.	Fundamental Cloud Architectures	07 Hours	16%
	Workload Distribution Architecture, Resource Pooling Architecture ,Dynamic Scalability Architecture, Elastic Resource Capacity Architecture, Service Load Balancing Architecture, Cloud Bursting Architecture, Elastic Disk Provisioning Architecture, Redundant Storage Architecture		
6.	Advanced Cloud Architectures	08 Hours	17%
	Hypervisor Clustering Architecture ,Load Balanced Virtual Server Instances Architecture, Non-Disruptive Service Relocation Architecture, Zero Downtime Architecture ,Cloud Balancing Architecture ,Resource Reservation Architecture, Dynamic Failure Detection and Recovery Architecture		
7.	Implementation of Cloud	05 Hours	08%
	Study of Cloud computing Systems like Amazon EC2 and S3, Google App Engine, and Microsoft Azure, Build Private/Hybrid Cloud using open source tools, Deployment of Web Services from Inside and Outside a Cloud Architecture. MapReduce and its extensions to Cloud Computing, HDFS, and GFS		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Assess and examine advantages and disadvantages of virtualization technology.
CO2	Compose services in a distributed computing environment to achieve tasks relevant to a knowledge-based business or public service
CO3	Evaluate a set of business requirements to determine suitability for a cloud computing delivery model.
CO4	Explore the various cloud computing architectures and paradigms.
CO5	Deployment of cloud and identify security implications in cloud computing.

Course Articulation Matrix:

CE444: INTERNET OF THINGS

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	3	2	-	5	4
Marks	100	50	-	150	

Pre-requisite courses:

- Networking
- Embedded System

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Introduction and evolution of IoT	04
2.	Organisation and primary components of IoT systems	08
3.	A reference IoT architecture	10
4.	Design issues for the IoT edge	12
5.	Security, trust, and privacy issues in IoT	08
6.	IoT case studies	03
	Total hours (Theory) :	45
	Total hours (Lab) :	30
	Total hours :	75

Detailed Syllabus:

1.	Introduction and evolution of IoT	04 Hours	09 %
	Introduction, Internet of Things Definition Evolution		
2.	Organisation and primary components of IoT systems	08 Hours	18 %
	Structure of IoT systems, IoT backend modules, IoT gateways, The IoT edge		
3.	A reference IoT architecture	10 Hours	22%
	Design principles and design requirements for the reference architecture, Real-world constraints		

4.	Design issues for the IoT edge	12 Hours	27%
	Sensors and actuators for IoT systems, Interoperability and reliability issues Communication protocols and protocol stacks for the edge devices, Hardware security for edge devices		
5.	Security, trust, and privacy issues in IoT	08 Hours	18%
	Identity management of IoT edge devices		
6.	IoT case studies	03 Hours	7%
	Smart grid, Home automation, Industrial IoT		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Interpret the vision of IoT from current business needs.
CO2	Compare and contrast the use of devices, gateways and data management in IoT.
CO3	Demonstrate a critical understanding of key technologies in sensing, data transmission and data processing for IoT.
CO4	Examine of the technologies and the standards relating to the Internet of Things and analyze basic protocols in sensor network
CO5	Evaluation of privacy management, challenges in designing and securing an IoT system.
CO6	Illustrate the application of IoT in industrial automation and identify real world design Constraints.

Course Articulation Matrix:

CE471: BLOCKCHAIN TECHNOLOGY (ELECTIVE- III)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	2	-	6	5
Marks	100	50	-	150	

Pre-requisite courses:

- Basic Information Security

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
16.	Fundamentals Behind Blockchain	07
17.	Blockchain Overview	06
18.	Block-Chain Consensus Mechanisms	12
19.	Introduction to BitCoin	12
20.	Solidity Essential	08
21.	Decentralized Application	10
22.	Blockchain Research issues, challenges and use cases	05
	Total hours (Theory) :	60
	Total hours (Lab) :	30
	Total hours :	90

Detailed Syllabus:

1.	Fundamentals Behind Blockchain	07 Hours	11%
	Symmetric key cryptography, Public key cryptography, Digital Signature, Cryptographically Secured Hash Functions, Cryptographically Secured Chain of Blocks, Merkle Trees.		
2.	Blockchain Overview	06 Hours	10%
	Evaluation of Blockchain Technology, Distributed Systems,		

	The History of Blockchain and Bitcoin, Types of Block-Chain		
3.	Block-Chain Consensus Mechanisms	12 Hours	20%
	Practical Byzantine fault tolerance algorithm, Proof of Work, Proof of Stake, Proof of Authority, Proof of Elapsed time		
4.	Introduction to BitCoin	12 Hours	20%
	Digital keys and addresses, Transactions, Mining, The Bitcoin network, Wallets, Bitcoin payments		
5.	Solidity Essential	08 Hours	13%
	Using the Remix IDE, Data Types and Functions, Creating Inline Assembly Functions, Mappings, Modifiers, Structs, and More, Generating ERC-20 Tokens, Extending Token Security (ERC-223), Deploying the ERC-20 Token Contract.		
6.	Decentralized Application	10 Hours	17%
	DAPP using Ehtereum, DAPP using Hyperledger.		
7.	Blockchain Research issues, challenges and use cases	05 Hours	09%
	KYC case study, Land Registry, Supply chain.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Understand the Basic Cryptography behind the Blockchain Technology and Bitcoin.
CO2	Define the structure of a Blockchain and classify why and when it is better than a simple distributed database.
CO3	Analyse the consensus mechanisms in a Blockchain Technology and critically assess its applicability in Blockchain based application.
CO4	Analyse to what extent smart and self-executing contracts can benefit automation, governance and transparent environment.
CO5	Design decentralized distributed application and measure the performance of Blockchain against centralized system.
CO6	Attain awareness of the new challenges that exist in monetizing businesses around Blockchain.

Course Articulation Matrix:

CE472: WIRELESS COMMUNICATION & MOBILE COMPUTING
(ELECTIVE- III)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	2	0	6	5
Marks	100	50	0	150	

Pre-requisite courses:

- Basic Knowledge of Computer Networks

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Wireless Communication Fundamentals	03
2.	Telecommunication Systems	13
3.	Wireless LAN	18
4.	Mobile Network Layer	13
5.	Transport and Application Layer	10
6.	Data Dissemination and Management	03
	Total hours (Theory) :	60
	Total hours (Lab) :	30
	Total hours :	90

Detailed Syllabus:

1.	Wireless Communication Fundamentals	03 Hours	5%
	Introduction, Wireless transmission – Frequencies for radio transmission – Signals – Signal Propagation ,Multiplexing – Modulations – Spread spectrum,MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks		
2.	Telecommunication Systems	13 Hours	25%
	GSM: Mobile services, System architecture, Radio interface, Protocols, Localization And Calling, Handover, Security, New data services; DECT: System architecture, Protocol architecture; TETRA, UMTS and IMT-2000		
3.	Wireless LAN	18 Hours	30%

	Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer, IEEE 802.11a - 802.11b – 802.11n standards, Bluetooth, Hyperlan, Wi-Fi, WiMax - Overview		
4.	Mobile Network Layer	13 Hours	20%
	Mobile IP, Dynamic Host Configuration Protocol, Routing Protocols – DSDV – DSR – Alternative Metrics		
5.	Transport and Application Layer	10 Hours	15%
	Traditional TCP, Classical TCP improvements – WAP, WAP 2.0		
6.	Data Dissemination and Management	03 Hours	05%
	Challenges, Data dissemination, Mobile data replication, Mobile data caching, Mobile cache maintenance, mobile web caching, caching in ad hoc networks.		

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Classify the fundamental concepts of Wireless Networks and its access techniques.
CO2	Understand and identify the GSM, GPRS and Bluetooth software model for mobile computing.
CO3	The ability to develop applications that are mobile-device specific and demonstrate current practice in mobile computing contexts.
CO4	Understanding of the characteristics and limitations of mobile hardware devices including their user-interface modalities.
CO5	Able to promote the awareness of the life-long learning, business ethics, professional ethics and current marketing scenarios in wireless network.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	2	2	-	-	-	-	-	-	-	-	-	1	1
CO2	1	1	2	2	1	-	-	-	-	-	-	-	-	1
CO3	2	3	2	1	2	-	-	-	-	-	-	-	-	2
CO4	2	2	1	1	1	-	-	-	-	-	-	-	2	2
CO5	1	2	2	1	1	-	-	-	-	-	-	2	1	2

Enter correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

If there is no correlation, put “-”

Recommended Study Material:

3. MATLAB
4. NS3

CE473 MACHINE LEARNING (ELECTIVE- III)

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	4	2	-	6	5
Marks	100	50	-	150	

Pre-requisite courses:

- Probability, linear algebra, calculus and programming language

Outline of the Course:

Sr. No.	Title of the unit	Minimum number of hours
1.	Fundamental concepts and Statistical Learning Techniques	10
2.	Neural Networks	08
3.	Bayesian Learning	06
4.	Supervised and Unsupervised Learning	15
5.	Reinforcement learning	04
6.	Kernel Methods	05
7.	Deep Neural Networks	12
	Total hours (Theory) :	60
	Total hours (Lab) :	30
	Total hours :	90

Detailed Syllabus:

1.	Fundamental concepts and Statistical Learning Techniques	10 hours	17%
	Introduction to Data science, Theory and practices in machine learning, Designing a Learning System, Issues in Machine Learning, Applications of ML, Global Developments of ML, Key challenges to adoption of ML in India. Statistical Learning Techniques: Descriptive statistics, Simple Linear Regression, ANOVA, Logistic Regression, Multi Linear regression, Correlation,		

	Moving Average, Random Number Generation, Histogram Smoothing, Sampling, Regularization, Rank Percentile.		
2.	Neural Networks	08 Hours	14%
	Neurons and biological motivation. Linear threshold units. Perceptrons: representational limitation and gradient descent training, Perceptron learning rule, Hebbian learning rule, Delta Learning rule, Multilayer networks and Backpropagation Learning Algorithm, Feed Forward, Activation Functioning, Types of Neural Network Architecture.		
3.	Bayesian Learning	06 hours	10%
	Bayes Theorem, Bayes Theorem and Concept Learning, Maximum Likelihood and Least Squared Error Hypothesis, Maximum likelihood hypothesis for Predicting probabilities, Minimum Description Length Principle, Bayes Optimal Classifier, Gibbs Algorithm, Naïve Bayes Classifier, Bayesian Belief Network, EM Algorithm.		
4.	Supervised and Unsupervised Learning	15 hours	25%
	Supervised Learning: Classification, Decision Tree, Naïve Bias, Support Vector Machine, Neural Network, K- Nearest Neighbour. Unsupervised Learning: Clustering, Nonparametric Methods, K-means, Hierarchical clustering, Density based clustering		
5.	Reinforcement learning	04 hours	06%
	Q Learning, Non deterministic rewards and Actions.		
6.	Kernel Methods	05 hours	8%
	Support Vector Machine, Sparse kernel machines, Bias-Variance trade-off. Regularization and model/feature selection, Sampling Methods.		
7.	Deep Neural Networks	12 hours	20%
	Introduction to Deep Learning, Deep Neural Network, Restricted Boltzmann machine, Convolution Neural Network,		

	AutoEncoders, Deep Belief Network, Recurrent Neural Network, Transfer learning.		
--	---	--	--

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Apply basic concepts of Machine Learning and Understanding of standard learning algorithms.
CO2	Analyse mathematical modelling of various Machine Learning algorithms.
CO3	Understanding challenges of machine learning like data characteristics, model selection, and model complexity.
CO4	Identify strengths and weaknesses of machine learning techniques suitable for a given problem domain and data set.
CO5	Design and implement of various machine learning algorithms in a range of real-world applications.
CO6	Evaluate and interpret the results of learning algorithms.

CE445: SOFTWARE GROUP PROJECT-IV

Credits and Hours:

Teaching Scheme	Theory	Practical	Tutorial	Total	Credit
Hours/week	-	4	-	4	2
Marks	-	100	-	100	

Pre-requisite courses:

- Programming Knowledge

Outline of the Course:

- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Students will work together in a team (at most three) with any programming language.
- Students are required to get approval of project definition from the department.
- After approval of project definition students are required to report their project work on weekly basis to the respective internal guide.
- Project will be evaluated at least once per week in laboratory Hours during the semester and final submission will be taken at the end of the semester as a part of continuous evaluation.
- Project work should include whole SDLC of development of software / hardware system as a solution of particular problem by applying principles of Software Engineering.
- Students have to submit project with following listed documents at the time of final submission.
 - m. Project Synopsis
 - n. Software Requirement Specification
 - o. SPMP
 - p. Final Project Report
 - q. Project Setup file with Source code
 - r. Project Presentation (PPT)
- A student has to produce some useful outcome by conducting experiments or project

work.

Total hours (Theory) : 00

Total hours (Lab) : 60

Total hours : 60

Course Outcome (COs):

At the end of the course, the students will be able to:

CO1	Identify and define the computing requirements of a problem to propose its appropriate solution.
CO2	Correlate knowledge of different subjects and apply it to implement solution of the problem.
CO3	Apply engineering and management principles to achieve project goal.
CO4	Prepare technical report and deliver presentation by applying different visualization tools and evaluation metrics.
CO5	Able to communicate effectively with a range of audiences.
CO6	Recognition of the need for and an ability to engage in continuing professional development.

Course Articulation Matrix:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CE446: SUMMER INTERNSHIP-II

Credits and Hours:

Teaching Scheme	Project	Practical	Tutorial	Total	Credit
Hours	90	-	-	90	3
Marks	150	-	-	150	

Outline of the Course:

1.	Instructional Method and Pedagogy
	• Summer internship shall be at least 90 hours during the summer vacation only. • Department/Institute will help students to find an appropriate company/industry/organization for the summer internship. • The student must fill up and get approved a Summer Internship Acceptance form by the company and provide it to the Coordinator of the department within the specified deadline. • Students shall commence the internship after the approval of the department Coordinator. Summer internships in research centers is also allowed. • During the entire period of internship, the student shall obey the rules and regulations of the company/industry/organization and those of the University. • Due to inevitable reasons, if the student will not able to attend the internship for few days with the permission of the supervisor, the department Coordinator should be informed via e-mail and these days should be compensated later. • The student shall submit two documents to the Coordinator for the evaluation of the summer internship: • Summer Internship Report • Summer Internship Assessment Form • Upon the completion of summer internship, a hard copy of “Summer Internship Report” must be submitted through the presentation to the Coordinator by the first day of the new term. • The report must outline the experience and observations gained through

	practical internship, in accordance with the required content and the format described in this guideline. Each report will be evaluated by a faculty member of the department on a satisfactory/unsatisfactory basis at the beginning of the semester. • If the evaluation of the report is unsatisfactory, it shall be returned to the student for revision and/or rewriting. If the revised report is still unsatisfactory the student shall be requested to repeat the summer internship.
2.	Format of Summer Internship Report
	The report shall comply with the summer internship program principles. Main headings are to be centered and written in capital boldface letters. Sub-titles shall be written in small letters and boldface. The typeface shall be Times New Roman font with 12pt. All the margins shall be 2.5cm. The report shall be submitted in printed form and filed. An electronic copy of the report shall be recorded in a CD and enclosed in the report. Each report shall be bound in a simple wire vinyl file and contain the following sections: • Cover Page • Page of Approval and Grading • Abstract page: An abstract gives the essence of the report (usually less than one page). Abstract is written after the report is completed. It must contain the purpose and scope of internship, the actual work done in the plant, and conclusions arrived at. • TABLE OF CONTENTS (with the corresponding page numbers) • LIST OF FIGURES AND TABLES (with the corresponding page numbers) • DESCRIPTION OF THE COMPANY/INDUSTRY/ORGANISATION: Summarize the work type, administrative structure, number of employees (how many engineers, under which division, etc.), etc. Provide information regarding • Location and spread of the company • Number of employees, engineers, technicians, administrators in the company • Divisions of the company

	• Your group and division • Administrative tree (if available) • Main functions of the company • Customer profile and market share • INTRODUCTION: In this section, give the purpose of the summer internship, reasons for choosing the location and company, and general information regarding the nature of work you carried out. • PROBLEM STATEMENT: What is the problem you are solving, and what are the reasons and causes of this problem. • SOLUTION: In this section, describe what you did and what you observed during the summer internship. It is very important that majority of what you write should be based on what you did and observed that truly belongs to the company/industry/organization. • CONCLUSIONS: In the last section, summarize the summer internship activities. Present your observations, contributions and intellectual benefits. If this is your second summer internship, compare the first and second summer internships and your preferences. • REFERENCES: List any source you have used in the document including books, articles and web sites in a consistent format. • APPENDICES: If you have supplementary material (not appropriate for the main body of the report), you can place them here. These could be schematics, algorithms, drawings, etc. If the document is a datasheet and it can be easily accessed from the internet, then you can refer to it with the appropriate internet link and document number. In this manner you don't have to print it and waste tons of paper.
	Total hours (Project) : 90
	Total hours : 90

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Ability to integrate existing and new technical knowledge for industrial
-----	--

	application.
CO2	Executing work with team and teammates from other disciplines
CO3	Get practices and experience related to professional and ethical issues in the work environment
CO4	Experience of demonstrating the impact of the internship on their learning and professional development.
CO5	Understanding of lifelong learning processes through critical reflection of internship experiences.

SYLLABI (Semester – 8)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CE447: SOFTWARE PROJECT MAJOR

Credits and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	-	36	36	20
Marks	-	600(250+350)	600	

Pre-requisite courses:

- Software Engineering and other relevant courses, Development tools and languages, soft skill.

Outline of the Course:

- Students work with industry/organization 4-to-6 months for development or research project.
- The definitions are verified and guidance are given to take the project at next level and can help industry, society or environment.
- The external guide (at industry/Organization) and internal guide (Institute faculty) continuously monitor the students' work and project file is maintained per group to document all the measurable work.
- Project work should include whole SDLC/Agile of development of software / hardware system as solution of particular problem by applying principles of Software Engineering.
- Project is evaluated twice during the semester by internal faculty of the university as a part of continuous evaluation.
- Final evaluation at the end of the semester is done by Industry experts or faculties from reputed university.
- Students have to submit SRS, SPMP, Design documents, Code and Test Cases in form of Project report.
- The feedback of the students' by external guide and Evaluator are taken during the semester to improve the teaching learning and evaluation process.

Course Outcome (COs):

At the end of the course, the students will be able to

CO1	Identify and justify/analyse the requirements of the projects with enhancement of the required tools and technology by individual and team.
CO2	Solve challenging projects for commercial, societal and environment benefit.
CO3	Apply the engineering knowledge to full fill the requirements of the projects pertaining to any discipline.
CO4	Explain the importance of planning, documentation, punctuality and work ethics.
CO5	Document the work which is carried out in proper format with industry standards.
CO6	Showcase the soft skill.

Course Articulation Matrix:

	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12	PSO1	PSO2
