CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

ACADEMIC REGULATIONS & SYLLABUS

2019-20

(Choice Based Credit System)

Faculty of Technology & Engineering (FTE)
M & V Patel Department of Electrical Engineering
Chandubhai S. Patel Institute of Technology (CSPIT)

Master of Technology Programme
(Power Electronics)
(Electrical Engineering)

Chandubhai S Patel Institute of Technology

Vision

To become a leading institute for creation and dissemination of knowledge in the frontiers of technology

Mission

To prepare world-class technocrats and researchers and facilitate enhanced deployment of technology for betterment of lives

M & V Patel Department of Electrical Engineering

Vision

To become an internationally recognized, research intensive education entity, serving as a workforce developer for the nation by providing the best education in close collaboration with society.

Mission

To create world class technocrats with strong theoretical foundations and practical engineering skills who can contribute through the technological applications and research for the betterment of lives.

PROGRAM EDUCATIONAL OBJECTIVES

The objectives of the Electrical Engineering Postgraduate Program:

1. Apply their knowledge and expertise to find solutions of the problems in core and allied areas of engineering, exhibiting creativity and entrepreneurial skills.
2. Conduct themselves in an ethical and professional manner, exhibiting effective skills in communication, management, teamwork and leadership.

Continue their intellectual development through self-study and continuing education, practicing life-long learning.

PROGRAM OUTCOMES (POs)

At the end of the program, the student will be able to:

PO 1	An ability to independently carry out research /investigation and development work to solve practical problems
PO 2	An ability to write and present a substantial technical report/document.
PO 3	Students would be able to work individually and in the team for betterment of the society.

PROGRAM SPECIFIC OUTCOMES (PSOs)

At the end of the program, the student will be able to:

PSO 1	Apply innovative skills along with modern engineering tools and techniques to carry out projects related to real-life applications in blending with industry and academia.

Academic Year 2019-2020

CHARUSAT

FACULTY OF TECHNOLOGY AND ENGINEERING

ACADEMIC REGULATIONS

Master of Technology Programmes

To ensure uniform system of education, duration of undergraduate and post graduate programmes, eligibility criteria for and mode of admission, credit load requirement and its distribution between course and system of examination and other related aspects, following academic rules and regulations are recommended.

1. *System of Education*

The Semester system of education should be followed across The Charotar University of Science and Technology (CHARUSAT) both at Undergraduate and Master's levels. Each semester will be at least 90 working day duration. Every enrolled student will be required to take a specified load of course work in the chosen subject of specialization and also complete a project/dissertation if any.

2. *Duration of Programme*

Postgraduate programme	(M. Tech.)
Minimum	4 semesters (2 academic years)
Maximum	6 semesters (3 academic years)

3. *Eligibility for admissions*

Minimum second class is required for admission into M. Tech programme.

4. *Mode of admissions*

Admission to M. Tech. programme will be as per Government of Gujarat guidelines. The eligibility norms require a condition to have a bachelor degree in related field and marks obtained in qualifying exam (like GATE) or common entrance test of Government of Gujarat. The detail eligibility norms will be as per Government of Gujarat guidelines.

5. *Programme structure and Credits*

As per annexure – I attached

6. *Attendance*

All activities prescribed under these regulations and enlisted by the course faculty members in their respective course outlines are compulsory for all students pursuing the courses. No exemption will be given to any student regarding attendance except on account of serious personal illness or accident or family calamity that may genuinely prevent a student from attending a particular session or a few sessions. However, such unexpected absence from classes and other activities will be required to be condoned by the Principal. Student's attendance in a course should be 80%.

7 *Course Evaluation*

7.1 The performance of every student in each course will be evaluated as follows:

- 7.1.1. Internal evaluation by the course faculty member(s) based on continuous assessment, for 30% of the marks for the course; and
- 7.1.1 Final examination by the University through modes such as; written paper or practical test or oral test or presentation by the student or a combination of any two or more of these, is set to 70% of the marks for each the course.

7.2 *Internal Evaluation*

- 7.2.1 A student shall be evaluated through Continuous Evaluation and Semester End Examination.
- 7.2.2 The weight of continuous assessment and End-semester examination shall be varying from UG to PG and from Faculty to Faculty as approved by Academic Council.
- 7.2.3 During the semester, a student shall be going through continuous assessment. The continuous assessment will be conducted by the respective Department / Institute. At the end of semester a student shall be evaluated through semester end examination comprising of theory and/or practical, viva-voce, term work components as decided by Academic Council.
- 7.2.4 The performance of candidate in continuous assessment and in end-semester examination together shall be considered for deciding the final grade in a course.

7.3 *University Examination*

- 7.3.1 The final examination by the University for 70% of the evaluation for the course will be through written paper or practical test or oral test or presentation by the student or a combination of any two or more of these.
- 7.3.2 In order to earn the credit in a course a student has to obtain grade other than FF.

7.3 Performance at Internal & University Examination

- 7.3.1 Minimum performance with respect to internal marks as well as university examination will be an important consideration for passing a course. Details of minimum percentage of marks to be obtained in the examinations (internal/external) are as follows:

Minimum marks in University Exam per subject	Minimum marks Overall per subject
40%	50%

- 7.3.2 If a candidate obtains minimum required marks per subject but fails to obtain minimum required overall marks, he/she has to repeat the university examination till the minimum required overall marks are obtained.

8. Grading

- 8.1. The total of the internal evaluation marks and final University examination marks in each course will be converted to a letter grade on a ten-point scale as per the following scheme.

Grade	AA	AB	BB	BC	CC	CD	DD	FF
Grade Point	10	09	08	07	06	05	04	00

- 8.2 The student's performance in any semester will be assessed by the Semester Grade Point Average (SGPA). Similarly, his/her performance at the end of two or more consecutive semesters will be denoted by the Cumulative Grade Point Average (CGPA). The SGPA and CGPA are calculated as follows:

- (i) $SGPA = \frac{\sum C_i G_i}{\sum C_i}$ where C_i is the number of credits of course i
 G_i is the Grade Point for the course i
and $i = 1$ to n , n = number of courses in the semester
- (ii) $CGPA = \frac{\sum C_i G_i}{\sum C_i}$ where C_i is the number of credits of course i
 G_i is the Grade Point for the course i
and $i = 1$ to n , n = number of courses of all semesters up to which CGPA is computed.
- (iii) No student will be allowed to move further in next semester if CGPA is less than 3 at the end of an academic year.

9. Award of Degree

- 9.1 Every student of the programme who fulfils the following criteria will be eligible for the award of the degree:
- 9.1.1 He/She should have earned minimum required credits as prescribed in course structure; and
 - 9.1.2 He/She should have cleared all internal and external evaluation components in every course; and
 - 9.1.3 In addition to above, the student has to complete the required formalities as per the regulatory bodies, if any.
- 9.2 The student who fails to satisfy minimum requirement of CGPA will be allowed to improve the grades so as to secure a minimum CGPA for award of degree. Only latest grade will be considered.

10 Award of Class:

The class awarded to a student in the programme is decided by the final CGPA as per the following scheme:

Award of Class	CGPA Range
Distinction	$\text{CGPA} \geq 7.5 \text{ \& } \leq 10.0$
First Class	$\text{CGPA} \geq 6.0 \text{ \& } < 7.5$
Second Class	$\text{CGPA} \geq 5.0 \text{ \& } < 6.0$
Pass Class	$\text{CGPA} < 5.0$

11 Transcript:

The transcript issued to the student at the time of leaving the University will contain a consolidated record of all the courses taken, credits earned, grades obtained, SGPA, CGPA, class obtained, etc.

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY
(CHARUSAT)

FACULTY OF TECHNOLOGY & ENGINEERING (FTE)

CHOICE BASED CREDIT SYSTEM

FOR

MASTER OF TECHNOLOGY & ENGINEERING

A. Choice Based Credit System:

With the aim of incorporating the various guidelines initiated by the University Grants Commission (UGC) to bring equality, efficiency and excellence in the Higher Education System, Choice Based Credit System (CBCS) has been adopted. CBCS offers wide range of choices to students in all semesters to choose the courses based on their aptitude and career objectives. It accelerates the teaching-learning process and provides flexibility to students to opt for the courses of their choice and / or undergo additional courses to strengthen their Knowledge, Skills and Attitude.

1. CBCS – Conceptual Definitions / Key Terms (Terminologies)

1.1. Core Courses

1.1.1 University Core (UC)

University Core Courses are those courses which all students of the University of a Particular Level (PG/UG) will study irrespective of their Programme/specialisation.

1.1.2 Programme Core (PC)

A 'Core Course' is a course which acts as a fundamental or conceptual base for Chosen Specialisation of Engineering. It is mandatory for all students of a particular Programme and will not have any other choice for the same.

1.2 Elective Course (EC)

An 'Elective Course' is a course in which options / choices for course will be offered. It can either be for a Functional Course / Area or Streams of Specialization / Concentration which is / are offered or decided or declared by the University/Institute/Department (as the case may be) from time to time.

1.2.1 Institute Elective Course (IE)

Institute Courses are those courses which any students of the University/Institute of a Particular Level (PG/UG) will choose as offered or decided by the University/Institute from time-to-time irrespective of their Programme /Specialisation

1.2.2 Programme Elective Course (PE)

A 'Programme Elective Course' is a course for the specific programme in which students will opt for specific course(s) from the given set of functional course/ Area or Streams of Specialization options as offered or decided by the department from time-to-time.

1.2.3 Cluster Elective Course (CE)

A 'Institutional Elective Course' is a course which students can choose from the given set of functional course/ Area or Streams of Specialization options (eg. Common Courses to EC/CE/IT/EE) as offered or decided by the Institute from time-to-time.

1.3 Non Credit Course (NC) - AUDIT Course

A 'Non Credit Course' is a course where students will receive Participation or Course Completion certificate. This will not be reflected in Student's Grade Sheet. Attendance and Course Assessment is compulsory for Non Credit Courses.

M. Tech. (Power Electronics and Drives) Programme

SYLLABI (Semester – I)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

EE741: MODELING & SIMULATION OF ELECTRICAL MACHINES (PC-1)**M.TECH IST SEMESTER****Credit & Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	4	2	6	5
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Basics of Electrical Machines Analysis.	10
2	Reference Frame Theory & Transformation.	09
3	Modeling of DC machines	09
4	Modeling of Induction Machines	11
5	Modeling of Synchronous Machines	11
6	Vector Control for Drives	10

Total hours (Theory): 60

Total hours (Lab): 30

Total hours:90

B. Detailed Syllabus:

- 1. Basic of Electrical Machines Analysis** **10 Hours 16.67 %**
Introduction, Magnetically coupled Circuits, Linear Magnetic System, Non Linear Magnetic System, Electromechanical Energy Conversion, Energy Relationships, Energy in Coupling Fields, Graphical Interpretation of Energy Conversion, Machine Windings and Air Gap MMF, Conventions, The Basic Two Pole Machine, Transformer and Speed Voltages in the Armature, Kron's Primitive Machine.
- 2. Reference Frame Theory & Transformation in Machines** **09 Hours 15.00%**
Background of Reference Frame Theory, Equations of Transformation, Stationary Circuit Variables Transformed to the Arbitrary Reference Frame: Resistive Element, Inductive Element, Capacitive Element, Commonly Used Reference Frame, Transformation between Reference Frames, Transformation of Balanced Set, Power Invariance, Balanced Steady State Phasor Relationships
- 3. Modeling of DC Machines** **09 Hours 15.00%**
Introduction, Voltage and Torque Equations, Basic Types of Direct-Current Machines: Separately Excited, Shunt, Series And Compound Machines, Numerical, Dynamic

Characteristics of PMDC and Shunt DC Motor, Time Domain Block Diagrams and State Equations

4. **Modeling of Induction Machines** 11 Hours 18.33 %
Voltage Equations in Machine variables, Torque Equation in Machine variables, Equations of Transformation for Rotor Circuits, Voltage Equations in Arbitrary Reference Frames Variables, Torque Equation in Arbitrary Reference Frame Variables, Equations of Induction Machine using Synchronous Reference Frame with Currents as Variables with Rotor Flux as Variables, Linearization of Machine Equations, Block Diagram for Computer Simulation
5. **Modeling of Synchronous Machines** 11 Hours 18.33 %
Voltage Equations in Machine Variables, Torque Equation in Machine Variables, Stator Voltage Equations in Arbitrary Reference Frame, Voltage Equations in Rotor Reference Frame, Block Diagram for Computer Simulation, Torque Equations in Substitute Variables, Rotor Angle and Angle between Rotors
6. **Vector Control for Drives** 10 Hours 16.67 %
Vector Control Analogy with Separately Excited DC Motor Drive, Vector Control Principle by Phasor Diagram and its Implementation, Induction Motor Flux Estimation Methods, Voltage Model Feedback Signal Estimation of Induction Motor, Current Model Feedback Signal Estimation, Direct or Feedback Vector Control with Rotor Flux Orientation, Indirect Vector Control Phasor Diagram and Equations, Indirect or Feed Forward Vector Control with Rotor Flux Orientation, Phasor diagram for Stator flux Oriented Vector Control, Stator Flux Oriented Vector Control Block Diagram with Estimation Equations.

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weightage may be reflected in the overall evaluation.

- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Course Outcomes (COs):

At the end of the course, the students will be able to

CO1	Learn the basic modelling concepts of machines.
CO2	Simulate and control the electrical machines in software.
CO3	Learn the generalized theory of machines, reference frame theories and various types of transformation which will help then to analyse the machines.
CO4	Transient analysis of machine performance.

Course Articulation Matrix:

	PO1	PO2	PO3	PSO1
CO1	2	-	-	1
CO2	2	3	2	1
CO3	3	2	-	2
CO4	2	2	-	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E. Recommended Study Material:

Books:

1. Paul. C. Krause, Oleg Wasynczuk, Scott . D. Sudhoff, **Analysis of Electric Machinery and Drive Systems**, 2nd Edition, IEEE Press A John Wiley Inter science.
2. Dr. P.S.Bimbhra, **Generalized theory of electrical machines**, Khanna Publishers.
3. A.E Fitzgerald, Charles Kingsley, Stephen .D. Umans, **Electric Machinery**, 6th Edition, TMH.
4. Bimal Bose, **Power Electronics and Motor Drives Advances and Trends**, Academic Press, Elsevier Publications.

EE743: ADVANCED POWER ELECTRONICS IN POWER SYSTEM (PC-2)**M.TECH 1st SEMESTER****Credit and Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the course:

Sr. No	Title of Unit	Hrs
1.	Basics of Power Electronics	07
2.	Modulation Techniques	07
3.	Operation of Various Converters	10
5.	Active Filters	10
6.	Fundamentals of Harmonic Analysis	07
7.	Power Quality Problems & Standards	04

Total hours (Theory): 45

Total hours (Lab): 30

Total hours: 75

B. Detailed Syllabus:

- Basics of Power Electronics.** **7 hours** **15%**
Single phase full bridge converter with R,R-L-E load, analysis of two pulse bridge converter with continuous conduction, Three phase full bridge converters with R,R-L-E load, Buck and Boost DC-DC Converter, voltage source inverter(180°mode) and current source inverter, Turn ON Snubber and Turn off snubber circuits.
- Modulation Techniques.** **7 hours** **16%**
Single PWM Technique, Multiple PWM technique, Sinusoidal PWM technique (Unipolar and Bipolar), selective Harmonic Elimination, Voltage Space Vector Modulation Technique
- Operation of Converters.** **10 hours** **22%**
Multi pulse converter: Y/Z phase shifting transformers, Δ /Z phase shifting transformer, Definition of THD and PF, 12 pulse and 18 pulse series type diode rectifier

4.	Active Filters.	10 hours	22%
	Concept and evolution of electrical Power Theory, Sources of Harmonic Production, Power definitions in Sinusoidal & Non Sinusoidal case Instantaneous reactive Power theory, Harmonic elimination by use of Active Filters, Power Circuit Diagram & Control Block diagram for Active Series, Shunt & Hybrid Filters		
6.	Fundamental of Harmonic Analysis.	7 hours	16%
	Fourier analysis, Representation of Harmonics using Fourier Series expansion with Numerical/Example ,Sequence of Fundamental, Fourth & Seventh Harmonic , Sequence of Second, Fifth & Eighth Harmonic, Absence of Triplen Harmonics in Line voltage. Harmonic Phase sequence in balanced Three Phase Power System Measurement of Harmonic Distortion: RMS Voltage & Current, Voltage & Current Distortion Factors, Relation of Power in Resistance, Inductance & Capacitance with Total Harmonic Distortion, Definition of Fundamental & Distortion Power Factor, Power Factor & THD, Current & Voltage Crest Factor. Source & Effects of Harmonic in Power System: sources of Harmonics, Transformers, Rotating machines, Fluorescent lights, Cycloconverters. Effect of Harmonic Distortion on Power system: Thermal, Iron & Dielectric Losses, Harmonics effect on Power system Harmonic Filter Design: Hardware configuration of various Filters, Series Tuned Filter, Second order Damped Filter, Band Pass Filters to be connected at AC side of HVDC Converters. Limits of Harmonic Distortion.		
7.	Power Quality problems & Standards	4 hours	9%
	Introduction: Definition & Reasons of Occurrence of following Voltage Dip, Brief voltage increases, Brief voltage interruption, Transients, Voltage Notches, Flickers, Distortion, Un-balance. Power Quality Indices Limits of Harmonic Distortion according to IEEE, IEC, EN and NORSOK limits. Brief Introduction of Power quality Standards: IEC 61000-2-5, IEC 61000-2-1, IEC 1159 (Categories of Power quality variation according to IEEE 1159 standard with their relevant Spectral content, Duration of		

occurrence & Magnitude)

C. Instructional Method and Pedagogy:

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weightage may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Course Outcomes (COs):

Upon successful completion of this course, a student will be able to

CO1	Enhance their basic skills in applications of Power Electronic converters in Power systems.
CO2	Know the performance and classification of Power Electronic converters.
CO3	Understand the Harmonics and its effect on power system applications.
CO4	Design of Active filters and hardware of Power electronics converters.
CO5	Hardware implementation of Power Electronic Converters and its control strategies.

EE751: POWER ELECTRONICS DEVICES AND CIRCUITS (PC-3)**M.TECH IST SEMESTER****Credit & Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Power Semiconductor Devices	06
2	Voltage Regulators	08
3	Gate and Base drive Circuits	09
4	Design of Magnetics	11
5	Resonant Converter	11

Total hours (Theory): 45

Total hours (Lab): 30

Total hours: 75

B. Detailed Syllabus:

- Power Semiconductor Devices** **06 Hours** **13.34 %**
Review of Semiconductor devices like Power BJT, SCR, MOSFET, IGBT, GTO, MCT; Static and dynamic characteristics of these devices; Single quadrant, Two quadrant and bid-directional switches.
- Voltage Regulators** **08** **17.78%**
Hours
Linear Regulators: Working of linear Power Supply (Voltage Regulators), IC based Regulators etc.
Switching Regulators: DC-DC Non-isolated (Buck, Boost, buck-boost, cuck) and Isolated (Flyback, Push-pull, Forward, Half bridge, Full bridge) Converters and its converter design considerations.
- Gate and Base drive Circuits** **09** **20.00%**
Hours
Design consideration of gate drive circuits, DC coupled drive circuits with unipolar and bipolar outputs, Isolation in drive circuits, Transistor based drive circuits, Commonly used chip based gate drive circuits (Single Gate driver IC, Boost-strap capacitor based half-bridge driver, 1-phase and 3-phase full bridge Driver IC), Thyristor firing circuits. Protection in drive circuits

4. **Design of Magnetics** 11 Hours 24.44 %
Magnetic Concepts, Design of Switching Inductor, Design of high frequency Transformer, Different types and shapes of cores
5. **Resonant Converter** 11 Hours 24.44 %
Introduction, Classification, Basic Resonant Circuit Concepts, Load Resonant Converter, Resonant Switch Converter, Zero Voltage and Zero Current Switching, Clamped Voltage Topologies, Resonant DC link Inverter, High Frequency Link Integral Half Cycle Converters.

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weight age may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Course Outcomes (COs):

At the end of this course, the student should:

CO1	Have good understanding of datasheet parameters of Power electronic devices and use of these parameters for design and selection of maximum switching frequency, Heat sink, Gate drivers and snubber circuit parameters for given condition.
CO2	Have good understanding of designing high frequency inductor, transformers, capacitor and their modelling.
CO3	Have good understanding of operation and design rectification of problem of non-isolated DC to DC converters.
CO4	Have good understanding of operation and design rectification of problem of various isolated and resonant DC to DC converters.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	3	-	-	3
CO2	3	-	-	3
CO3	3	2	-	3
CO4	3	2	-	3

1 represents Low, 2 represents Medium and 3 represents High correlation.

E. Recommended Study Material:

Text Book:

1. "Power Electronics: Circuits, Devices and Applications", by Muhammad H. Rashid, Pearson Education India.
2. "Power Electronics" by P.S.Bimbhra, Khanna Publisher

EE766: POWER QUALITY (PE-1)
M.TECH IST SEMESTER

Credit & Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Introduction to Power Quality	11
2	Electrical Transients	07
3	Harmonics	13
4	Power Factor	07
5	Electromagnetic Interference	07

Total hours (Theory): 45

Total hours (Lab): 30

Total hours:75

B. Detailed Syllabus:

- 1. Introduction to Power Quality** **11 Hours 24.44%**
Definition of Power Quality, Power Quality Progression, Power Quality Terminology, Power Quality Issues, Responsibilities of the Suppliers and Users of Electrical Power, Power Quality Standards, Common Power Frequency Disturbances.
- 2. Electrical Transients** **07 Hours 15.56 %**
Transient System Model, Examples of Transient Models and Their Response, Application of DC Voltage to a Capacitor, Application of DC Voltage to an Inductor, Power System Transient Model, Examples of Transient Waveforms
- 3. Harmonics** **13 Hours 28.88%**
Definition of Harmonics, Harmonic Number, Odd and Even Order Harmonics, Harmonic Phase Rotation and Phase Angle Relationship, Causes of Voltage and Current Harmonics, Individual and Total Harmonic Distortion, Harmonic Signatures, Effect of Harmonics on Power System Devices, Guidelines for Harmonic Voltage and Current Limitation, Harmonic Current Mitigation.
- 4. Power Factor** **07 Hours 15.56 %**

Active and Reactive Power, Displacement and True Power Factor, Power Factor Improvement, Power Factor Correction, Other Advantages of Power Factor Correction, Voltage Rise Due to Capacitance.

5. Electromagnetic Interference

07 Hours 15.56 %

Frequency classifications, Electromagnetic Interference Terminology, Power Frequency Fields, High-Frequency Interference, EMI Mitigation

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weightage may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Course Outcome (COs)

Upon successful completion of this course, a student would be able to

CO1	Recognize importance of Power Quality
CO2	Understand electromagnetic interference and its effects on electrical equipment.
CO3	Analyze harmonics, their characteristics and effect on various electrical equipment.
CO4	Examine the importance of power factor in electrical power quality.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	1			
CO2	2	2	1	1
CO3		2	1	1

CO4	1		1	
-----	---	--	---	--

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E. Recommended Study Material:

Books

1. Power quality (TextBook) by C. Sankaran, CRC Press
2. Electrical Power Systems Quality by Roger C. Dugan, Tata Mcgraw Hill Publication
3. George J. Wakileh, Power System Harmonics, Fundamentals, Analysis and Filter Design, Springer International.
4. Arrillaga, N.R. Watson, Power System Quality Assessment, John Willey & Sons Publication

EE767: DIGITAL CONTROL SYSTEM (PE-1)**M.TECH IST SEMESTER****Credit & Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Introduction to Digital Control system	03
2	Z-Transforms	06
3	Stability Analysis	05
4	Time Response	05
5	Frequency Response	05
6	Digital Controllers using Classical Methods	07
7	State Space analysis of digital control systems	09
8	Modern Digital Controller Design	05

Total hours (Theory): 45

Total hours (Lab): 30

Total hours: 75

B. Detailed Syllabus:

1. Introduction to Digital Control System **03 Hours 6.67 %**
Introduction - Advantages of Digital control systems, Practical aspects of the choice of sampling rate and multi-rate sampling, Basic discrete time signals, Quantization, Sampling theorem, Data conversion and Quantization - Sampling process, Mathematical modeling - Data reconstruction and filtering of sampled signals, zero - order hold.
2. Z-Transforms **06 Hours 13.33 %**
Z-Transforms: Discrete-time Systems, Transform Methods, Theorems of Z transform, Solution of Difference Equations, Inverse z Transforms
3. Stability Analysis **05 Hours 11.11 %**
z transform analysis of open loop, closed loop systems - Modified z Transform - transfer function - Stability of linear digital control systems -Stability tests.
4. Time Response **05 Hours 11.11 %**

System Time Response, Characteristic Equation, Analog s-plane/Digital z-plane Mapping, Steady-State Accuracy, Pulse transfer functions of the zero - order Hold and relationship between $G(s)$ and $G(z)$.

5. Frequency Response 05 Hours 11.11 %
Frequency domain analysis - Bode plots - Gain margin and phase margin, Nyquist stability criterion in the z- plane
6. Digital Controllers using Classical Methods 07 Hours 15.56 %
PI, PD & PID Controllers, Lag, lead and lag-lead compensators, Design of lag compensator and lead compensator based on root locus and Bode plot approaches, Bilinear transformation.
7. State Space analysis of digital control systems 09 Hours 20 %
State equations of discrete data systems, solution of discrete state equations, State transition Matrix: z-transform method. Relation between state equations and transfer functions. Design of Dead beat Controller.
8. Modern Digital Controller Design 05 Hours 11.11 %
Pole Placement Design, State Estimation, Design of the full order and reduced order state observer, Controllability and Observability.

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weight age may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Student Learning Outcomes:

At the end of course, the students will able to

CO1	To get in-depth knowledge and critical understanding of the theory and principles of digital control systems and their applications. To model physical elements in dynamic systems and find z transform of a system comprising mechanical and other
-----	---

	physical components.
CO2	To examine the stability of the system by various methods with the help of mathematical modeling and transfer function approach.
CO3	To predict the output response of a first- or second-order system both in time and frequency domains subject to typical input signals.
CO4	To analyze and interpret the system with the help of state space analysis method.
CO5	To design a first-order and second-order system with suitable parameters and/or PID controller and advanced digital controllers that will be stable and has the required system performance.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	2	-	1	-
CO2	3	-	2	1
CO3	2	-	2	1
CO4	2	2	3	2
CO5	2	-	3	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E. Recommended Study Material:

Text Book:

1. B. C.Kuo, Digital Control Systems, Oxford University Press, 2/e, Indian Edition, 2007.
2. K. Ogata, Discrete Time Control Systems, Prentice Hall, 2/e, 1995.
3. Digital Control Systems C. H. Houpis and G.B. Lamont; McGraw Hill
4. Continuous and Discrete Control Systems Dorsay; McGraw - Hill.

Reference Book:

1. M. Gopal, Digital Control and State Variable Methods, Tata Mcgraw Hill, 2/e, 2003.
2. G. F. Franklin, J. D.Powell and M. L. Workman, Digital Control of Dynamic Systems
3. Addison Wesley, 1998, Pearson Education, Asia, 3/e, 2000.K. J.Astroms and B. Wittenm

EE771: DIGITAL SIGNAL PROCESSING AND IT'S APPLICATIONS (CT-1)

M. TECH Ist SEMESTER

A. Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

B. Outline of the course:

Sr. No	Title of Unit	Hrs
1.	Introduction to Signals and Systems	10
2.	Realization of Discrete time systems	10
3.	Discrete Fourier Transform	10
4.	Digital Filter Design	15

Total hours (Theory): 45

Total hours (Lab): 30

Total hours: 75

C. Detailed Syllabus:

- 1. Introduction to Signals and Systems** 10 Hours 22 %
Basic elements of Digital Signal Processing System. Advantages of Digital over Analog Signal Processing, Generalized Block diagram of a DSP System, Continuous-time Vs Discrete time signals, Classification of discrete time Signals, Deterministic and Random Signals, Periodic and A periodic signals, Even and odd signals, Exponential and Sinusoidal signals, Causal and Non-Causal signals, Energy and Power Signals, Some Standard signals like Impulse, Step, Ramp and Parabolic. Basic operations on signals: Shifting, Scaling, Time reversal or Folding, Addition, Subtraction, Multiplication. Classification of discrete time Systems: Static and Dynamic Systems, shift-variant and invariant systems, Linear and Non Linear systems, Causal and Non Causal systems, Stable and Unstable systems, impulse response and convolution sum, analytical evaluation of discrete convolution, properties of convolution
- 2. Realization of Discrete Time Systems** 10 Hours 22 %
Introduction to Z Transform, properties of Z transform, Numerical for Z transform,

Realization of discrete time systems: basic building block, types of digital system, **Structures for Realization of IIR Systems and numerical:** Direct Form I, Direct Form II, Cascade form, Parallel form, **Structures for Realization of FIR systems and numerical:** Direct Form, Cascade Form Realization

3. **Discrete Fourier Transform** 10 Hours 22%

Concepts of frequency in continuous-time and discrete time signals, Discrete Fourier Series: Exponential form, trigonometric form, relation between exponential and trigonometric form of discrete Fourier series, properties of discrete Fourier transform (DFT), Examples, Relation between DFT and Z transform. Numerical to compute DFT of signal, Computational Advantage of Fast Fourier Transform(FFT) Over DFT, Decimation in time (DIT) & Decimation in Frequency (DIF), Algorithm for implementation of FFT: Derivation, Butterfly Diagram & Related Numerical.

4. **Digital Filter Design** 15 Hours 34 %

Advantages and disadvantages of digital filter over analog filters, **Classification of filter:** low pass, high pass, band pass and band reject (Band Stop), filter specification and Magnitude Characteristics of Low Pass Filter.

Design of IIR filters from analog filters: derivation for impulse invariant & Bilinear transformation method, Analog Butterworth and Chebyshev Filters, Design of digital low pass Butterworth filter and low pass Chebyshev filters, Design of High Pass, Band Pass and Band Reject IIR Filters from Low Pass IIR Filter, Frequency transformation in Analog Domain and Frequency transformation in Digital Domain & Related Numerical

Design of FIR Filters: Advantages and Disadvantages of FIR Filter, design of FIR filters using windows, various windows for FIR filter and summary, frequency sampling techniques, numerical

D. Course Outcomes (COs):

At the end of this course, the student should:

CO1	Have good understanding about basic processing and realization of Digital Signal and system. Hence, The students will be able to understand basic terms and keywords related to signal processing in research paper and will be able to describe their algorithm in the required mathematical form/nomenclatures.
-----	---

CO2	To understand Transforms and application for Digital Signal Processing. The Fourier transform and Z transform are targeted here and their application to Power system will be understood.
CO3	To understand theory and application of Infinite Impulse Response (IIR) filters and be able to design IIR filters.
CO4	To understand theory and application of Finite Impulse Response (FIR) filters and be able to design IIR filters.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	3	3	-	3
CO2	2	-	-	3
CO3	3	2	-	3
CO4	3	2	-	3

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E. Instructional Method and Pedagogy:

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weightage may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

F. Recommended Study Material:

Books:

1. V. Udayashankara: Real time Digital Signal Processing, Fundamentals, Algorithms and Implementation using TMS Processor, Eastern Economy Edition
2. A. Anandkumar, Digital Signal Processing, PHI Learning Pvt Ltd.

EC767: Embedded System Design (CT-1)

Credit Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of the Unit	Minimum Number of Hours
1.	Introduction to Embedded Systems	08
2	Typical Embedded Systems	14
3	RISC microcontrollers	18
4	Embedded product development life cycle	05

Total Hours (Theory):45

Total Hours (Lab): 30

Total Hours:75

B. Detailed Syllabus:

This will provide details about topics under each units of the course.

1	Introduction to Embedded Systems	8Hrs	18%
1.1	History of embedded systems		1hr
1.2	Classification of embedded systems		1hrs
1.3	Major application area of embedded systems		2hrs
1.4	Purpose of embedded systems		1hrs
1.5	Fundamental issues in hardware software co-design		1 hrs
1.6	Introduction to unified modeling language (UML)		2 hrs
2	Typical Embedded Systems	14Hrs	30%
2.1	Core of the Embedded Systems		2hrs
2.2	Memory		3hrs
2.3	Sensors and actuators		4hrs

2.4	Communication interface		3hrs
2.5	Embedded firmware		2hrs
3	RISC microcontrollers	18Hrs	40%
3.1	RISC and CISC architectures		1hrs
3.2	AVR architecture and pin functions		2hrs
3.3	AVR programming in C		3hrs
3.4	I/O interfacing: LED, multiplexed 7-segment, LCD, GLCD, sensors, keypad, relay, buzzer		5hrs
3.5	AVR interrupt programming in C		2hrs
3.6	AVR serial programming in C		2hrs
3.7	Communication protocol: I2C protocol and RTC interfacing, SPI protocol and max7221 interfacing		3hrs
4	Embedded product development life cycle	5Hrs	12%
4.1	Product enclosure design tool		1 hrs
4.2	Product enclosure development techniques		1 hrs
4.3	Objective of EDLC		1 hrs
4.4	Different phases of EDLC and approaches		2 hrs

C. Instructional Method and Pedagogy:

- Multimedia Projector
- OHP
- Chapter wise Assignments
- Quiz
- Chalk + Board
- White Board
- Online Demo

D. Recommended Study Material:

❖ Text Books:

1. Introduction to Embedded Systems by shibu K V mcgraw hill
2. The AVR microcontroller and Embedded Systems by muhammad Ali Mazidi, Sarmad Naimi, Sepehr Naimi

❖ **Reference Books:**

1. System Design: A Unified Hardware/Software Introduction by Frank Vahid and Tony D. Givargis, Addison Wesley, 2002.
2. Computers as Components by Wayne Wolf, Morgan Kaufmann, 2001
3. Embedded C programming and the ATMEL AVR by Barnett, cox and o'cull, Thomson

CE767: OPERATING SYSTEM DESIGN & CONCEPTS (CT-1)

Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the course:

Sr No.	Title of the unit	Minimum number of hours
1.	Basics of operating system	02
2.	The Process and The kernel	08
3.	Threads and Lightweight Processes	04
4.	The Buffer Cache	06
5.	System Calls for the file system	08
6.	Signal and Session Management	06
7.	Interposes Communications	06
8.	Case Study: Multiprocessor Systems, Distributed Unix Systems	05

Total hours (Theory): 45 Hrs.

Total hours (Lab): 30 Hrs.

Total hours: 75 Hrs.

B. Detailed Syllabus:

1. Basics of operating system 02Hours 4%
Introduction to an operating system, history of an Operating system, computer hardware review, Operating system Concepts, System Calls
2. The Process and The kernel 08 Hours 18%
Introduction, architecture of Unix operating system, Mode space and context, The process abstraction, kernel data structure, Executing in kernel mode, System administrator
3. Threads and Lightweight Processes 04Hours 8%

Process control, Fundamentals abstraction, Lightweight Process design, User-level threads libraries, Multithreading in Solaris and SVR4, Threads in Mach, Digital Unix, Mac 3.0 continuations

4. The Buffer Cache **06Hours 14%**

Buffer headers, Structure of the buffer pool, Scenario for retrieval of a buffer, Reading and writing disk blocks, Advantages and disadvantages of duffer cache.

5. System Calls for the file system **08Hours 18%**

Open, read , write , file and record locking, adjusting the position of File I/O - lseek , close, file creation, creation of special file, change directory and change root, change owner and change mode, STATE and FSTATE, Pipes, Dup, mounting and unmounting file systems, link and unlink, file system abstractions and maintenance

6. Signal and Session Management **06Hours 14%**

Single generation and handling, Unreliable single, Reliable single, Singles in SVR4, Signals implementations, Exceptions, Mach exception handling, Process groups and Terminal Management, The SVR4 sessions architecture

7. Interprocess Communications **06Hours 14%**

Universal IPC facilities, System V IPC, Mach IPC, Messages, Ports, Message passing, Port operations, Extensibility Mach 3.0 enhancements, discussion

8. Case Study: Multiprocessor Systems, Distributed Unix Systems **05Hours 10%**

overview, Solutions with master and slave processors, solutions with semaphore, performance limitation, Satellite Processors, The Newcastle connection, transparent distributed file systems

C. Instructional Method and Pedagogy:

- A laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.
- Minimum 10 experiments are suggested in the laboratory related to course content.

D. Student Learning Outcome:

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Faculty would use coached problem solving method as it is class format in which faculty provide a structured, guided context for students working collaboratively to solve problems.

- Attendance is compulsory in lectures and laboratory which carries 5% component of the overall evaluation.
- Internal exams or Open-book tests will be conducted and average will be considered as a part of 15% overall evaluation.
- Assignments based on course content will be given to the students at the end of each unit/topic and will be evaluated at regular interval. It carries a weight age of 5%.
- Surprise tests/Quizzes will be conducted which carries 5% component of the overall evaluation.

The course includes

- Students will be able to learn advanced topics in design and implementation of microkernel-based.
- Students will also learn to read and critique research papers.
- Students will be familiar with classic operating systems literature.
- Students will make substantial contributions to the operating systems project.

E. Recommended Study Material:

❖ Text Books:

1. "UNIX Internals" by Uresh Vahalia Prentice Hall Press
2. "The Design of the Unix Operating System" by Maurice J. Bach Tata McGraw Hill

❖ Reference Books:

1. Advanced Concepts in Operating Systems, Singhal and Niranjana G. Shivaratna.
2. OS: Advanced Concepts, Maekawa, Oldehoeft. Addison-Wesley.
3. "Distributed Systems", Sape Mullender, Addison-Wesley.
4. Multithreaded Programming with Pthreads, Bil Lewis, Daniel J. Berg.

PG PROGRAMMES

Semester I
HSS Elective

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
FACULTY OF MANAGEMENT STUDIES
DEPARTMENT OF HUMANITIES AND SOCIAL SCIENCES
HS703.01 (A/B/C/D/E/F/G/H): LANGUAGES (French)

I. Credits and Schemes:

Sem	Course Code	Course Name	Credits	Teaching Scheme	Evaluation Scheme				
				Contact Hours/Week	Theory		Practical		Total
					Internal	External	Internal	External	
I	HS703.01	LANGUAGES (French)	02	02	--	--	30	70	100

II. Course Outline

Module No.	Title/Topic	Classroom Contact Hours
1	Introduction to French Language Facts and figures about French Language Basic French Linguistics * Alphabets * Accents * Liaison * Nasalization French Culture, Differ between French and English Grammar : • Subject Pronoun • Verbs : (être ,avoir, habiter,regarder,manger ... “er” verb) • Form of address • Numbers (1 to 20) • Nouns and plurals of nouns • The expression : C’est ,Il y a Presentation: 1) Self Introduction 2) Question and answering Dialogue	08
2	Grammar : • Definite articles • Indefinite articles • Present tense ○ Positive Forms ○ Negative Forms • Numbers (21 to 100 , 100-1000) • Days ,Months ,Family • Verbs: (aller,venir,finir,pouvoir,vouloir “ir “ verb) Social Links: 1) My family & relations 2) Appointments	08

	3) Gathering information from someone Dialogue	
3	Grammar : • Common Adjectives • Comparative Adjectives • Common Adverbs • Interrogative Forms • The expression : “On” • Directions , Countries, Nationalities, Seasons, Weather, • Professions • Verbs: (Prendre, Apprendre, Comprendre, faire ... “re “ verb) Work , Study and Travel 1) Job/ Profession 2) Ticket Reservation (At Bus/At Railway/At Airport) Dialogue	08
4	Grammar : 1) Common Prepositions 2)Common Conjunctions 3)Past Tense 4) Future Tense 5) Colors ,Shapes, Animals ,Vegetables, Fruits 6) Verbs: (“er”, “ir”, ”re” etc...) Food & Shopping 1) Buy a vegetables and fruits 2) Any Conversation between Customer and Vendor (At Mall/ At Restaurant / At Market) Dialogue	06
Total		30

III. Instruction Methods and Pedagogy

The course is based on pragmatic learning. Teaching will be facilitated by Reading Material, Discussion, Task-based learning, assignments and various interpersonal activities like group/pair work, independent and collaborative work, presentations, etc.

IV. Evaluation:

The students will be evaluated continuously in the form of their consistent performance. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

The students' performance in the course will be evaluated on a continuous basis through the following components:

Internal Evaluation:

Sl. No.	Component	Number	Marks per incident	Total Marks
1	Assignment / Presentation/ Task	5	5	25
2	Attendance and Class Participation			05
Total				30

External Evaluation

The University Practical Examination will be for 70 marks and will test the LSRW skills in the French Language.

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Term Work, Viva and Practical (LSRW)	-	70	70
Total				70

Course Outcome (COs):

After completion of the course, the student would:

CO1	Have a basic overview of the French language and culture.
CO2	Develop a basic understanding of the usage of French language such as alphabets,numbers,months , colour etc.
CO3	Learn the basics of French Grammar and their usages
CO4	Learn to use basic language functions such as introducing oneself, answering basic Wh questions
CO5	be able to initiate conversations/dialogues in the French language confidently.

Course Articulation Matrix:

	PO1	PO2	PO3
CO1	-	-	2
CO2	-	-	2
CO3	-	-	2
CO4	-	-	2
CO5	-	-	2

Correlation levels 1, 2 or 3 are as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Note: The reference/ reading material will be provided in consultation with the expert.

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

FACULTY OF MANAGEMENT STUDIES DEPARTMENT OF HUMANITIES AND SOCIAL SCIENCES

HS704 A | B | C | E | F | G | H: ACADEMIC SPEAKING

I. Credits and Schemes:

Sem	Course Code	Course Name	Credits	Teaching Scheme	Evaluation Scheme				
				Contact Hours/Week	Theory		Practical		Total
					Internal	External	Internal	External	
II	HS704	Academic Speaking	02	02	--	--	30	70	100

II. Course Outline

Module No.	Title/Topic	Classroom Contact Hours
1	Foundations of Advance Communication - Meaning and Definition of Advance Communication - Advance Communication in Digital, Social, Mobile World - Strategies for Advance Communication - Meaning and Concept of Academic Language - High Frequency Academic Vocabulary	04
2	Art of Conversation - Describing people, places and things - Expressing opinions - Making suggesting - Persuading someone - Interpreting and Summarizing	06
3	Science of Power Speaking - Phonemes - Word Stress - Pronunciation - Intonation - Pause - Register - Fluency - Prosody - Lexical Range	06
4	Academic Speaking Application – Part I	08

	• <i>Art of Oratory</i> • <i>Formal Presentation</i> • <i>Speech Analysis – Decoding Best Speeches</i>	
5	Academic Speaking Application – Part II • <i>Job Interview</i> • <i>Group Discussion</i> • <i>Meeting</i>	06
Total		30

III. Instruction Methods and Pedagogy

The course is based on practical learning. Teaching will be facilitated by reading material, discussion, task-based learning, projects, assignments and various interpersonal activities like case studies, group work, independent and collaborative research, presentations etc.

IV. Evaluation

The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation

The students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	I-Talk	1	10	25
2	Situational Speaking	1	05	
3	Case Study - Speech Analysis	2	10	
4	Attendance and Class Participation			05
Total				30

External Evaluation

The University Practical Examination will be for 70 marks and will test the advance communication skills and academic speaking.

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical	-	70	70
Total				70

V. Course Outcome (COs):

After the completion of the course, the student would:

CO1	understand and demonstrate advance communication skills and academic
-----	--

	speaking.
CO2	demonstrate linguistic competence
CO3	demonstrate performing ability at group discussion and personal interview.
CO4	demonstrate the formal presentation skills.
CO5	demonstrate ability to communicate in diverse situations

Course Articulation Matrix:

	PO1	PO2	PO3
CO1	1	-	-
CO2	-	2	-
CO3	-	2	-
CO4	-	2	-
CO5	-	2	-

Correlation levels 1, 2 or 3 are as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

VI. Reference Books

- Headway Academic Skills - Level 1: Listening, Speaking and Study Skills
Student's Book Paperback

VII. Reading

- Unit 1: Business communication Today (Thirteenth Edition) by Courtland L. Bovee, John V. Thill and Roshan Lal Raina
- Unit 2: Effective Speaking Skills by Terry O' Brien
- Unit 2: Speak Better Write Better by Norman Lewis
- Unit 2: Well Spoken: Teaching Speaking to All Students by Erik Palmer
- Unit 3: Let Us Hear Them Speak : Developing Speaking – Listening Skills in English by Jayshree Mohanraj (Publisher – Sage Publication)
- Unit 4: The craft of scientific presentations: Critical steps to succeed and critical errors to avoid. New York: Springer by Michael Alley
- Unit 4: Presentation Skills in English by Bob Dignen (Publisher: Orient Black Swan)

M. Tech. (Power Electronics) Programme

SYLLABI (Semester – II)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

EE745 FACTS AND HVDC TRANSMISSION (PC-4)**M.TECH 2nd SEMESTER****Credits and Hours:**

Teaching scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	5
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. no of hours
1	Characteristic of EHV AC Transmission Network	06
2	FACTS Controllers	10
3	Power Flow with FACTS Controllers	11
4	HVDC Transmission	11
5	Integrated Operation of EHV AC and HVDC Systems	7

Total Hours (Theory) : 45

Total Hours (Lab) : 30

Total Hours: 75

B. Detailed Syllabus

- | | | | |
|---|---|----------|--------|
| 1 | Characteristic of EHV AC Transmission Network | 06 Hours | 13.33% |
| Introduction, uncompensated transmission lines, line equations, SIL, effect of line length, load power and power factor on voltage and reactive power for uncompensated line, maximum power and stability consideration for uncompensated line. Active and passive compensator, uniformly distributed fixed and regulated shunt compensation, lines with mid point shunt and series compensation. | | | |
| 2 | FACTS Controllers | 10 Hours | 22.22% |

Need of FACTS devices, classification of FACTS devices, operating principle of SVC, V-I characteristic of SVC, advantage of slope in V-I characteristic, SVC applications for transient and voltage stability improvement, mitigation of SSR, advantages of TCSC, different mode of operation of TCSC, different modeling concepts of TCSC, Operating principle of STATCOM, SSSC and UPFC and their applications for power system performance improvement

- | | | | |
|----------|--|-----------------|---------------|
| 3 | Power Flow with FACTS Controllers | 11 Hours | 24.44% |
| | Power flow solution with SVC, TCSC, SSSC and UPFC | | |
| 4 | HVDC Transmission | 11 Hours | 24.44% |
| | HVDC system configuration and components, fundamental equations in HVDC system, HVDC links, converter theory and performance equation, valve characteristic, converter circuits, converter transformer rating, multi bridge converters, abnormal operation of HVDC system, control of HVDC system, harmonics and filters. Influence of AC system strength on AC/DC system interaction, response to AC and DC system faults | | |
| 5 | Integrated Operation of EHV AC and HVDC Systems | 07 Hours | 15.57% |
| | Power flow analysis in AC/DC system, modeling of DC links, solution of DC load flow, AC-DC power flow, HVDC light, protection in HVDC, grounding in HVDC systems, stability improvement with HVDC integration | | |

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, pre-requisite of the subject will be discussed.
- Lecturers will be conducted with aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures, which carries 10 marks in overall evaluation.
- Two internal exams will be conducted and average of the same will be converted to equivalent of 15 Marks as a part of internal theory evaluation.
- Assignments based on course content will be given to the students for each unit and will be evaluated at regular interval. It carries a weightage of 5 marks in the overall internal evaluation.

D. Course Outcomes (Learning Outcomes):

Upon successful completion of this course, a student will be able to:

CO1	Compare the HVDC Transmission and EHVAC transmission
-----	--

CO2	Identify, analyze and understand the converter configurations used in HVDC system and its components to enhance the skill development.
CO3	Understand controllers for controlling the power flow through a dc link
CO4	Identify analyze and understand the different FACTS controller required for the power system performance improvement.
CO5	Understand the role of impedance control, phase angle control and voltage control in controlling real and reactive power in transmission systems.
CO6	To learn the mathematical modelling of different FACTS controllers for power flow analysis.

Mapping of course outcomes with program outcomes

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	1	1	1	-
CO2	1	1	2	2
CO3	1	1	-	1
CO4	2	1	3	2
CO5	1	-	2	-
CO6	3	-	1	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E. Recommended Study Material:

Books and References:

1. E. W. Kimbark, Direct Current Transmission, Vol 1, Wiley-Interscience, 1971
2. P. Kundur, Power System Stability and Control, McGraw Hill, 1994.
3. S. Kamakshaiah and V. Kamaraju, HVDC Transmission, McGraw Hill, 2011
4. K.R. Padiyar, HVDC Power Transmission Systems: Technology and System Interactions, New Age International
5. E. Acha, FACTS: Modeling and Simulation in Power Networks, Wiley 2004
6. T.J.E Miller, Reactive Power Control in Electric Systems, Wiley India Edition, 1982
7. R. Mohan Mathur and R. K. Varma, Thyristor-based FACTS controllers for Electrical Transmission systems, IEEE Press, 2002

EE756: CONTROL OF ELECTRIC DRIVES (PC-5)**M.TECH 2nd SEMESTER****Credit Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	5
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Fundamentals Of Electric Drives	04
2	DC Drives	12
3	Induction Motor Drives	14
4	Synchronous Motor Drives	09
5	Machine Modeling And Analysis	06

Total hours (Theory) : 45

Total hours (Lab) : 30

Total hours : 75

B. Detailed Syllabus:

- Fundamentals Of Electric Drives** **04 Hours 08.89 %**
Introduction, Choice of Electrical Drives, Dynamics of Electrical Drives, Concept of Multi-quadrant operation, Components of load torques, Selection of motor power rating, Speed torque, speed control, Starting, Braking.
- DC Drives** **12 Hours 26.67 %**
DC Drives: Modeling, Rectifier fed DC drive, Chopper controlled DC drives, Close loop control of DC drive. Ward Leonard Drives, Analysis of steady state and dynamic operation.
- Induction Motor Drives** **14 Hours 31.11 %**
Introduction, Review of three phase I.M. analysis and performance, Analysis of I.M. fed from Non-sinusoidal supply voltage, Stator voltage control, V/f controlled induction motors, Slip power recovery, CSI fed induction motor drives, Applications.
- Synchronous Motor Drives** **09 Hours 20 %**
Introduction, Operation from Fixed Frequency Supply, Synchronous motor variable

speed drive, Variable Frequency control of multiple synchronous motor, Self controlled synchronous motor drive employing load commutated thyristor inverter, Self-controlled synchronous motor employing cycloconverter, Permanent magnet ac motor drives, Sinusoidal PMAC motor drives, Brush less dc motor drive,

5. Machine Modeling And Analysis

06 Hours 13.33 %

Basics of reference frame theory, voltage and torque equations in machine variables for induction motor and synchronous motor for different reference frames. Analysis of steady state and dynamic operation

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, pre-requisite of the subject will be discussed.
- Lecturers will be conducted with aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory, which carries 10 marks in overall evaluation.
- Two internal exams will be conducted and average of the same will be converted to equivalent of 15 Marks as a part of internal theory evaluation.
- Assignments based on course content will be given to the students for each unit and will be evaluated at regular interval. It carries a weightage of 5 marks in the overall internal evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lecturers.

D. Course Outcomes (COs):

Upon successful completion of this course, a student will be able to

CO1	Enhance their knowledge regarding the basics of electrical drives.
CO2	Able to know AC and DC drives and its control with various power electronics components
CO3	Design of different converters and hardware of Power electronics drives.
CO4	Useful to them for carry out any type of research work or any type of industrial work in the field of power electronics drives applications.

Mapping of course outcomes with program outcomes

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	3	2	-	-
CO2	2	2	-	-
CO3	-	2	2	2
CO4	-	2	3	3

1 represents **Low**, **2** represents **Medium** and **3** represents **High correlation**.

EE757: ADVANCED POWER ELECTRONIC CONVERTERS (PC-6)**M.TECH 2nd SEMESTER****Credits and Hours:**

Teaching scheme	Theory	Practical	Total	Credit
Hours/week	4	2	6	5
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. no of hours
1	Resonant Converters	15
2	Multi-pulse converters	15
3	Multi-level converters	15
4	Matrix converters	15

Total Hours (Theory) : 60

Total Hours (Lab) : 30

Total Hours:905

B. Detailed Syllabus

- | | | | |
|--|-------------------------------|-----------------|-------------|
| 1 | Resonant Converters | 15 Hours | 25 % |
| Introduction, Classification of resonant converters, basic resonant circuit concepts, load resonant converters, resonant switch converters, zero voltage switching, clamped voltage topologies, resonant dc link inverters with zero voltage switching, high-frequency-link integral-half-cycle converters | | | |
| 2 | Multi-pulse converters | 15 Hours | 25 % |
| Concept of multi-pulse, Need for Phase Shifting Transformer, Phase shifts with Y-Z and Δ-Z transformer configurations, Delta-Polygon and Fork type configurations, Analysis to determine phase shift and current waveforms, Harmonic Current Cancellation, Applications of multi-pulse converters | | | |
| 3 | Multi-level converters | 15 Hours | 25 % |

Need for multi-level inverters, Concept of multi-level Cascaded Multi-level Inverter, Operation with equal and unequal DC sources, Carrier based PWM Control Strategy, Diode Clamped multi-level inverter configurations, Space Vector Modulation, Even Order Harmonic Elimination, Effect on Neutral Point Voltage, Regulation of Neutral Point Voltage, Carrier Based Control Schemes; Other Multilevel Inverter Configurations like Flying Capacitor, NPC-Hybrid etc. Features and relative comparison of these configurations and Applications

4 Matrix converters 15 Hours 25 %

Fundamentals of matrix converter technology, Conventional Matrix Converter, Bi-directional switch topologies, Modulation techniques for matrix converters, Performance and control of matrix converters, Commutation and protection issues, Concept of Direct AC-AC frequency Converter and Indirect AC-AC frequency conversion without DC link energy storage.

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, pre-requisite of the subject will be discussed.
- Lecturers will be conducted with aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures, which carries 10 marks in overall evaluation.
- Two internal exams will be conducted and average of the same will be converted to equivalent of 15 Marks as a part of internal theory evaluation.
- Assignments based on course content will be given to the students for each unit and will be evaluated at regular interval. It carries a weightage of 5 marks in the overall internal evaluation.

D. Student Learning Outcomes: (Course Outcome)

Upon successful completion of this course, a student will be able to

CO1	Enhance their advance skills in Power Electronic converters.
CO2	Know the performance and classification of Advanced Power Electronic converters and its control schemes.
CO3	Design of different converters and hardware of Power electronics converters.

CO4	Application and industry oriented hardware implementation of Power Electronic Converters and its control strategies
-----	---

Mapping of course outcomes with program outcomes

EE768: POWER ELECTRONICS FOR RENEWABLE ENERGY SOURCES (PE-2)**M.TECH 2ND SEMESTER****Credit & Hours:**

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Introduction	08
2	Electrical Machines for Renewable Energy Conversion	10
3	Power Converters	09
4	Analysis of Wind And PV Systems	09
5	Hybrid Renewable Energy Systems	09

Total hours (Theory): 45

Total hours (Lab): 30

Total hours:75

B. Detailed Syllabus:

- 1. Introduction** **08 Hours** **17.78 %**
Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment, - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy.
- 2. Electrical Machines for Renewable Energy Conversion** **10 Hours** **22.22%**
Reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG.
- 3. Power Converters** **09 Hours** **20.00%**
Solar: Block diagram of solar photo voltaic system
Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing
Wind: Three phase AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters matrix converters.
- 4. Analysis of Wind And PV Systems** **09 Hours** **20.00%**
Stand alone operation of fixed and variable speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system

5. Hybrid Renewable Energy Systems

09 Hours 20.00%

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

C. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weight age may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

D. Course Outcomes (COs):

At the end of the course, the students will be able to

CO1	To provide knowledge about the grid stands alone and connected renewable energy systems.
CO2	To equip with required skills to derive the criteria for the design of power converters for renewable energy applications.
CO3	To analyze and comprehend the various operating modes of wind electrical generators and solar energy systems.
CO4	To design different power converters namely AC to DC, DC to DC and AC to AC converters for renewable energy systems.

Course Articulation Matrix:

	PO1	PO2	PO3	PSO1
CO1	2	-	1	-

CO2	2	2	2	1
CO3	3	2	2	2
CO4	3	2	2	3

1 represents **Low**, **2** represents **Medium** and **3** represents **High correlation**.

E. Recommended Study Material:

Text Book:

1. S. N. Bhadra, D.Kastha, S.Banerjee, “Wind Electrical Systems”, Oxford University Press, 2005.
2. B.H.Khan Non-conventional Energy sources Tata McGraw-hill Publishing Company, New Delhi, 2009.

EE769: CONTROL OF SPECIAL ELECTRICAL MACHINES (PE-2)

M.TECH 2ND SEMESTER

A. Credit & Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

B. Outline of the Course:

Sr. No.	Title of Unit	Min. No. of Hrs
1	Permanent magnet materials and motors	12
2	Stepper Motors	10
3	Switched Reluctance Motor	06
4	Energy Efficient motors	06
5	Condition Monitoring of Electrical Machines	06
6	Linear Induction Machines & Wind Mill Generators	05

Total hours (Theory): 45

Total hours (Lab): 30

Total hours:75

C. Detailed Syllabus:

- Permanent magnet materials and motors** 12 Hours 26.67%
Introduction, Stator frames of conventional PM dc motors. Equivalent circuit of PM. Comparison between the axial and radial permanent magnet motors, applications.

BLDC Motor and PMSM: Construction and working principle, Equivalent magnetic circuit, Type of converter and speed control,
- Stepper Motors** 10 Hours 22.23%
Definition and types of stepper motors, Various modes of operation of Variable reluctance (VR) stepper motors, Micro stepping control of stepper motor, Multi stack VR stepper motor construction and working, Construction and working of Permanent Magnet (PM) stepper motor, Construction and working of Hybrid stepper motor, Torque-angle characteristics of the stepper motor.
- Switched Reluctance Motor** 06 Hours 13.33%
Construction, operating performance, Type of converter used for SRM drives, Speed control, Applications.

4. **Energy Efficient motors** 06Hours 13.33 %
Standard motor efficiency, concept of Energy efficient motor. Efficiency evaluation technique, Direct Measurement method, Loss, Segregation method, Comparison, motor efficiency labeling, Energy efficient motor standards. Motor life cycle, Direct Savings and pay back analysis, Efficiency evaluation factor.
5. **Condition Monitoring of Electrical Machines** 06 Hours 13.33 %
Concept of condition monitoring, benefit of condition monitoring, Fault detection & diagnosis techniques for Transformer and Induction motor, Recent trends in condition monitoring.
6. **Linear Induction Machines & Wind Mill Generators** 05 Hours 11.11 %
Comparison with synchronous generator, constant voltage & frequency generation, reactive power compensation. Construction, operation, performance, control and applications of Wind mill generators..

D. Instructional Methods and Pedagogy

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lectures and laboratory which carries a component of the overall evaluation.
- Minimum two internal exams will be conducted and will be considered as a part of overall evaluation.
- Assignments based on course content will be given to the students for each unit/topic and will be evaluated at regular interval and its weight age may be reflected in the overall evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

F. Course Outcome (COs)

Upon successful completion of this course, a student will be able to

CO1	Recognize & understand the performance, operation and application of various AC & DC special machines.
CO2	Define various permanent magnet material used for manufacturing of special machine.

CO3	Acquire the knowledge and provide operational instructions for permanent magnet motors/generators, switched reluctance motor and energy efficient motors.
CO4	Understand the types and operation of wind turbine generators and evaluate case studies based on renewable energy sources.
CO5	Perform conditional monitoring of electrical machines.

Course Articulation Matrix:

EE772: RESTRUCTURING AND DEREGULATION OF POWER SYSTEM (CT-2)**2ND SEMESTER AND 1ST YEAR****M.TECH (Electrical Engineering)**

A. Credit Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

B. Outline of the Course:

Sr. No.	Title of Unit	Hrs
1	Introduction to Deregulation in Power System	02
2	Power System Restructuring Model	03
3	Available Transfer Capability (ATC)	10
4	Congestion Management	10
5	Transmission Pricing	05
6	Ancillary Services	10
7	Optimal Bidding in Restructured Power System	05

Total hours (Theory) : 45

Total hours (Lab) : 30

Total hours :75

C. Detailed Syllabus:

1. Introduction to Deregulation in Power System 02 4.44%
Hours

Concepts of regulation and deregulation, Characteristic of regulated power system, Need to restructured the power system, Overview of a deregulated industry, Disaggregation of traditionally vertically integrated utility, Structure of deregulated power system, Different entities in deregulated power system, Responsibilities of independent system operator, Trading arrangements: Pool, Bilateral, Multilateral, Power Exchange, Energy auction and market clearing prices

2. Power System Restructuring Model 03 6.66%
Hours

Classification of market models, Models based on energy trading, Models based on contractual agreements, Models based on ISO, Market operations, Day-Ahead and Hour-ahead markets, Elastic and Inelastic market, Market power, Vertical and horizontal market power, Measuring market power

3. **Available Transfer Capability (ATC)** 10 Hours 22.22%
Definition of ATC, Criteria for ATC evaluation, Methods of ATC calculation, Power transfer distribution factor (PTDF) and Line outage distribution factor (LODF), Optimal power flow (OPF), Continuation power flow (CPF), Open Access Same-Time Information System (OASIS), Structure of OASIS, Functionality of OASIS, Posting of information on OASIS, Information requirement of OASIS
4. **Congestion Management** 10 Hours 22.22%
Definition and effects of congestion in restructured power system, General methodologies for congestion management, Transaction curtailment, Transmission capacity reservation, System re-dispatch, Overall congestion management process, Methods for congestion management, Available transfer capability (ATC), Price area congestion management, Optimal power flow (OPF), Formulation of intra-zonal and inter-zonal problem for congestion management, Market based dynamic congestion management
5. **Transmission Pricing** 05 11.11%
Hours
Cost component of transmission system, Pricing of transmission service, Transmission pricing methods.
6. **Ancillary services** 10 Hours 22.22%
Ancillary services in restructured power system, Global overview of ancillary service management, Reactive power as an ancillary services, Reactive power placement analysis, Nodal pricing of reactive power, Costing and pricing of third party reactive power support, Synchronous generator as an ancillary service provider, Frequency regulation as an ancillary service, Spinning reserve service, Black start capability service
7. **Optimal Bidding in Restructured Power System** 05 11.11%
Hours
Game theory – an overview, Framing of bidding problem in game theory, Example, Optimization based approach for making bidding, Optimization based market simulator, Market prices with GENCOs behavior, Markov decision process

D. Course Outcomes (COs):

Upon successful completion of this course, a student would be able to

CO1	Interpret the fundamentals of Restructured power system and use them to solve various complex problems of restructured power system.
CO2	To create and apply appropriate solution methods to solve power system economics problems
CO3	Apply latest Artificial intelligence methods to solve bidding optimization of smart grid in the presence of RES and electric vehicles.

EC770 DIGITAL IMAGE & VIDEO PROCESSING (CT-2)

M.TECH 2nd SEMESTER

A. Credit Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

B. Outline of the Course:

Sr. No.	Title of the Unit	Minimum Number of Hours
1.	Fundamental of Digital Image Processing	3
2.	Image Transforms	7
3.	Image enhancement	6
4.	Image Restoration	6
5.	Image Compression	8
6.	Video formation and representation	8
7.	2D Motion Estimation	7

Total Hours (Theory):45

Total Hours (Lab): 30

Total Hours:75

C. Detailed Syllabus:

	This will provide details about topics under each units of the course.		
1.	Fundamental of Digital Image Processing	03 Hours	8 %
1.1	Fundamental steps in Digital Image Processing		
1.2	Sampling and quantization,		
1.3	Basic relationship between pixels, 2-D Convolution		
2.	Image Transforms	07 Hours	16 %
2.1	2-D Discrete Fourier Transform		
2.2	Discrete Cosine Transform		
2.3	Discrete Wavelet transform		
3.	Image Enhancement	06 Hours	13 %
3.1	Basic Gray Level Transformations, Histogram Processing		
3.2	Enhancement using Arithmetic /Logic operations		

3.3	Image Smoothing and sharpening in spatial domain		
3.4	Image Smoothing and sharpening in frequency domain		
3.5	Edge detection and thresholding		
4.	Image Restoration	06 Hours	13 %
4.1	Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering		
4.2	Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering,		
4.3	Geometric Mean Filter, Geometric Transformations		
5.	Image Compression	08 Hours	17 %
5.1	coding Redundancy, spatial and temporal redundancy		
5.2	Compression models : Lossy and Lossless		
5.3	Huffman coding, Arithmetic coding, LZW coding, run length coding, Bit Plane coding, transform coding, predictive coding ,		
5.4	wavelet coding,		
5.5	Introduction JPEG standards		
6.	Video formation and representation	08Hours	17 %
6.1	Digital Video, Time varying image formation model: 2D motion models		
6.2	Fourier analysis of video signals and frequency response of Human visual system		
6.3	sampling of video signals and sampling rate conversion		
6.4	Video modelling		
7.	2-D Motion Estimation	07 Hours	16 %
7.1	Optical flow, general methodologies,		
7.2	pixel based motion estimation		
7.3	Block matching algorithm		
7.4	Mesh based motion Estimation, global Motion Estimation,		
7.5	Application of motion estimation in video coding.		

D Instructional Methods and Pedagogy:

- Multimedia Projector
- OHP
- Audio Visual Presentations
- Chalk + Board
- White Board
- Online Demo

- Charts

E Student Learning Outcomes / objectives:

- Enhancement of various images
- Able to restore the images from noises
- Video formation from images
- Motion estimation algorithms
- Video coding introduction .

F Recommended Study Material:

Text Books:

1. S. Jayaraman, S. Esakkirajan & T. Veerakumar, "Digital Image Processing", Tata McGraw Hill Education Pvt. Ltd. Second Edition.
2. Yao wang, Joem Ostarmann and Ya – quin Zhang, "Video processing and communication ",1st edition , PHI

Reference books:

1. Digital Image Processing, Rafael Gonzalez, Richard Woods, 2nd ed., Pearson Education
2. Fundamentals of Digital Image Processing, A.K. Jain ,Prentice Hall of India
3. M. Tekalp , "Digital video Processing", Prentice Hall International

**CE768: SOFTWARE PROJECT MANAGEMENT & QUALITY
ASSURANCE (CT-2)
M.TECH 2nd SEMESTER**

Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	3	2	5	4
Marks	100	50	150	

A. Outline of the course:

Sr No.	Title of the unit	Minimum number of hours
1.	Introduction to Software Project Management System	06
2.	Project Tracking and Configuration Management	08
3.	Introduction to Software Quality Assurance	05
4.	Software quality Assurance (SQA) Management and Software Quality Metrics	08
5.	Software Quality Engineering and Inspection and Defect prevention	06
6.	Software Testing and Maintenance	08
7.	Software Testing Tools	04

Total hours (Theory): 45Hrs.

Total hours (Lab): 30Hrs.

Total hours: 75Hrs.

B. Detailed Syllabus:

- 1. Introduction to Software Project Management System** 06 Hours 13 %
Overview of Project Planning, Project Estimation, Project Scheduling, Organization and Team Structure, Risk Analysis and Management, Resource Allocation
- 2. Project Tracking and Configuration Management** 08 Hours 17 %
Measurement of Physical and Financial progress, Earned value analysis, Status reports and Milestone reports, SCM activities, Standards for Configuration Audit Functions, Personnel in SCM Activities, Change control, Source code Control System (SCCS), Software Configuration Management: Some Pitfalls
- 3. Introduction to Software Quality Assurance** 05 Hours 11 %
Quality Control, Assurance, Movements, SQA-Software Quality Assurance Activities,

Approaches To SQA, Reliability, ISO 9000 And 9001, CMM Levels, Quality Audit, Concepts of Quality Improvement, Concepts of Process Maturity, Improving Process Maturity, IDEALSM Model for Process Improvement

4. Software quality Assurance (SQA) Management and Software Quality Metrics 08 Hours 17 %

Overview of SQA planning, techniques and contents of a SQA plan , establishing quality goals - Quality Function Deployment-Goal/Question/Measure Paradigm, total quality Management, cost of quality, quality assurance management, quality standards, factors affecting SQA effort, Management review process - technical review process -software assertion process - walkthrough process - audit process - verification & validation, Measuring quality, measurement criteria, product and process quality metrics, metrics for configuration management and software maintenance, example of metrics programs, complexity metrics and their relationship with testing and quality, metrics for object-oriented software analysis.

5. Software Quality Engineering, Inspection and Defect prevention 06 Hours 13 %

Defining Quality Requirements, Complexity Metrics and models, Project Tracking and Oversight, Data Quality Control, Software Inspection, Reliability Models, Reliability Growth Models

6. Software Testing and Maintenance 08 Hours 17 %

Foundations of Testing, Test Planning, Test Design and Implementation, Testing Network Management Systems, Web Based Testing, Testing Object-Oriented systems, Test Execution and Measurement, Management Issues for Software Quality, Software Testing Types: Unit, Integration, & System, Benchmarking and Certification, Control flow & loop testing, Data-flow testing, Transaction-flow testing, Domain testing, Coverage vs. usage based testing, Software Reuse, Software Aging, Product Enhancement, Reverse Engineering, Re-engineering Method, Architectural Simplification

7. Software Testing Tools 04 Hours 12 %

Test case Generation Methodology, Study of various Testing Tools (Win Runner, Load Runner), Automatic Testing Tool.

C. Instructional Method and Pedagogy:

- Lectures will be taken in class room with the use of multi-media presentations and black board – mix of both.

- Assignments based on above course content will be given to the students at the end of each chapter. Each assignment contains minimum 5 questions.
- Quizzes and Surprise tests will be conducted for testing the knowledge of students for particular topic.

E. Student Learning Outcome:

Upon successful completion of this course, students will be able to understand software project management process and different aspect of development process necessary for the management of the project which includes various activities, resources, quality, cost and system configuration etc. Student will learn the issues related to design and development of good quality software, data gathering, and interpretation and learn the relevant techniques and quality models. Students will study the various topics relevant to Software Quality and Testing. It focuses on types of testing and test case generation for testing the software. It introduces the testing tool to test the system. Student will also learn defect prevention and software maintenance.

F. Recommended Study Material:

❖ Text Books:

1. Pankaj Jalote, "Software Project Management in Practice", 2002, Pearson, Education Asia.

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY

FACULTY OF MANAGEMENT STUDIES DEPARTMENT OF HUMANITIES AND SOCIAL SCIENCES

HS705 (A/B/C/E/F/G/H): ACADEMIC WRITING

I. Credits and Schemes:

Sem	Course Code	Course Name	Credits	Teaching Scheme	Evaluation Scheme				
				Contact Hours/Week	Theory		Practical		Total
					Internal	External	Internal	External	
II	HS705	Academic Writing	02	02	–	–	30	70	100

II. Course Outline

Module No.	Title / Topic	Classroom Contact Hours
1	Academic Writing and Research Process • Introduction to Academic Writing • Academic Writing as a Part of Research • Types of Academic Writing • Features of Academic Writing • Importance of Good Academic Writing in various Academic Works	05
2	Anatomy of Academic Writing • Academic Vocabulary • Simple and Complex Sentences • Organizing Paragraphs • The Writing Process • Adopting Academic Writing Style	05
3	Key Academic Skills • Note – taking • Note – making • Paraphrasing • Summarizing	05
4	Accuracy in Academic Writing • Lexical Range • Academic Language and Structures • Elements of Writing • Proof Reading, Editing, and Rewriting	05
5	Using and Citing Sources of Ideas • Academic Texts and their Types • Intellectual Honesty in Academic Writing • Avoiding Plagiarism – Idea Theft	05

	- Degrees of Plagiarism - Types of Borrowing - Anatomy of Citations - Common Citation Styles	
6	Contemporary Practices in Academic Writing - Analytical Essays - Graph / Table / Process Interpretation and Description - Writing Reports - Writing Research / Concept Papers	05
Total		30

III. Instruction Methods and Pedagogy

The course is based on practical learning. Teaching will be facilitated by reading material, discussion, task-based learning, projects, assignments and various interpersonal activities like writing, group work, independent and collaborative research, etc.

IV. Evaluation

The students will be evaluated continuously in the form of their consistent performance throughout the semester. There is no theoretical evaluation. There is just practical evaluation. The evaluation (practical) is schemed as 30 marks for internal evaluation and 70 marks for external evaluation.

Internal Evaluation

The students' performance in the course will be evaluated on a continuous basis through the following components:

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Paragraph Writing	1	3	03
2	Note-taking / Note-making	1	3	03
3	Paraphrasing / Summarizing	1	4	04
4	Essay Writing	1	5	05
5	Concept Paper Writing	1	10	10
6	Attendance and Class Participation			05
Total				30

External Evaluation

The University Practical Examination will be for 70 marks and will test the professional communication skills and academic writing skills of the students.

Sl. No.	Component	Number	Marks per incidence	Total Marks
1	Viva / Practical / Quiz / Project / Academic Writing	–	70	70
Total				70

V. Course Outcomes (COs)

At the end of the course, learners:

CO1	have sound understanding of the concept and applications of academic writing
CO2	have acquired enough knowledge of academic writing style, strategy and approach
CO3	be able to demonstrate error free and effective academic writing
CO4	be able to demonstrate ability to work on project/report/paper writing
CO5	understand the concept of plagiarism and learn to use citation and referencing styles

Course Articulation Matrix:

	PO1	PO2	PO3
CO1	1	3	1
CO2	-	3	-
CO3	-	3	-
CO4	-	3	-
CO5	-	2	-

Correlation levels 1, 2 or 3 are as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

M. Tech. (PE) Programme

SYLLABI (Semester – 3)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
FACULTY OF TECHNOLOGY & ENGINEERING
M & V PATEL DEPARTMENT OF ELECTRICAL ENGINEERING
EE811: PROJECT PRELIMINARIES
M TECH 3rd SEM POWER ELECTRONICS

Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	-	-	-	4
Marks	-	-	200	

A Outline of the Course:

- Project Preliminaries include course work on a specialized Subject or a Seminar.
- The course work shall be related to the area of his/her project research work.
- The coursework may be chosen from the existing PG (M. Tech.) Programmes of the registering department or from those of other departments.
- In addition to existing courses of the M. Tech. Programme, a department may offer special courses or seminar topics to the students.
- The specific subject of course work study will be decided by the department level Post Graduate Committee on recommendation of the supervisor(s).
- Student at the beginning of a semester may be advised by his/her supervisor (s) for recommended courses.
- Resident students will satisfy the course requirement by attending Institute and Departmental courses, and submitting technical writings on assigned course.
- Non-resident students (full time research in R&D institutions/industries) will submit equivalent amount of technical writing and reports on seminars from their own places of work.
- Course offered at 3rd Semester will be evaluated at least once during the semester and at the end of the semester as a part of continuous evaluation.
- The course work and report is expected to show clarity of thought and expression, critical appreciation of existing literature and analytical or experiment or software based applications in the field of specialization.

- Course work can be based on topic of the Project Work. It may include literature review, required theoretical input, study and comparison of various approaches for the proposed project work.
- A student has to produce some useful outcome by conducting experiments or simulations.
- Student can learn all aspects and functionality of specialized software in the institute.
- Student can generate one working test bench using research paper along with results verified from referred paper through simulation and by modify existing work student can produce one research paper (research studies)

B Instructional Methods and Pedagogy:

- Students will select related topic based on subjects they learnt and other literatures like books, periodicals, journals and various internet resources.
- Students can select the topic based on the research areas of available supervisor/guide.
- Each student has to prepare a write-up of about 30-40 pages in prescribed format only. The report typed on A4 sized sheets and bound should be submitted after approval by the guide and endorsement of the Head of Department.
- Performance of students at the seminar will be assessed by the department level Post Graduate Committee. The supervisor/guide based on the quality of work and preparation and understanding of the candidate shall do an assessment of the course.

C Course Outcomes (COs):

Upon successful completion of this course, a student would be able to

CO1	At the end of the course the student's gets exposure to design a research investigation that incorporates appropriate theoretical approaches, conceptual models, and a review of the existing literature.
CO2	Students will explore the new ideas and the possible areas to work ahead.
CO3	Student will learn the various research methodologies useful for doing project work.
CO4	Student will learn to investigate the chosen topic in depth. This implies collecting and reviewing literature and understanding and interpreting the most up-to-date concepts and theories of your chosen academic field and/or project topic.
CO5	Student will learn to apply the concepts and theories learnt in previous years of study

and work placements.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	3	2	3	2
CO2	3	2	1	2
CO3	2	3	3	2
CO4	3	3	2	2
CO5	3	2	3	1

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

D Recommended Study Material:

1. Programming Languages: C, C⁺⁺, MATLAB

6. Sadhna (Engineering Science) (<http://www.ias.ac.in/sadhana/>)

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
FACULTY OF TECHNOLOGY & ENGINEERING
M & V PATEL DEPARTMENT OF ELECTRICAL ENGINEERING
EE812: PROJECT PHASE I
M TECH 3rd SEM POWER ELECTRONICS

A Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	-	-	-	18
Marks	-	-	500	

B Outline of the Course:

- The Project shall be related to the major field of his/her PG specialization work.
- The Project should be one of the major pieces of evidence that students are familiar with or that student wants to be familiar with. It should reflect specialist subject by means of deep and sustained study.
- The project will be finalized by the department level Post Graduate Committee on recommendation of the supervisor(s).
- The project work shall be carried out by each candidate independently during the third and fourth semester under the guidance of one of the faculty members of the Department. If the project work is of inter-disciplinary nature, a co-guide shall be taken from the same or any other relevant Department.
- If a project work has to be carried out in any industry / factory / organization, outside the campus, the permission to that effect and the name of co-guide at any of these organizations shall be intimated to the Post Graduate Committee at the beginning of third semester.
- Project Phase I includes literature review, required theoretical input, study and comparison of various approaches for the proposed dissertation work.

C Instructional Methods and Pedagogy:

- Student has to submit a project/dissertation proposal indicating the tentative title and broad outline of the proposed work and the name(s) of the supervisor(s) along-with their concurrence in writing within 30 days from the starting of the third semester.

- Utmost care should be taken in selection of research topic so that repetition of research work is avoided.
- Project Phase- I will be evaluated at least once during the semester and at the end of the semester as a part of continuous evaluation.
- After successful completion of Project Phase I only students are allowed to go register for Project Phase - II.

D Course Outcomes (COs):

Upon successful completion of this course, a student would be able to

CO1	Student will judge a topic that is appropriate for his/her degree specialization.
CO2	At the end of the course the student's gets exposure to construct and justify research questions related to the topic.
CO3	Student will be in a position to design a research investigation that incorporates appropriate theoretical approaches, conceptual models, and a review of the existing literature.
CO4	Student will learn to structure a discussion in a coherent and convincing way by synthesizing the material in the context of the research questions.
CO5	Student will be having sufficient collection of the literature/experimental data for the implantation/experimentation in Project Phase - II.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
CO1	3	2	3	2
CO2	3	2	1	2
CO3	2	3	3	2
CO4	3	3	2	2
CO5	3	2	3	2

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) No correlation “-”

E Recommended Study Material:

- 5 Indian Jr. of Engg. and Material Sc. (www.niscair.res.in)
- 6 Sadhna (Engineering Science) (<http://www.ias.ac.in/sadhana/>)

M. Tech. (PE) Programme

SYLLABI (Semester – 4)

CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CHAROTAR UNIVERSITY OF SCIENCE & TECHNOLOGY
FACULTY OF TECHNOLOGY & ENGINEERING
M & V PATEL DEPARTMENT OF ELECTRICAL ENGINEERING
EE813: PROJECT PHASE II
M TECH 4th SEM POWER ELECTRONICS

A Credit and Hours:

Teaching Scheme	Theory	Practical	Total	Credit
Hours/week	-	-	-	30
Marks	-	-	1000	

B Outline of the Course:

- Student should carry out the investigation by identifying sources of evidence, accessing those using accepted and rigorous academic methods, and analysing and interpreting the material gathered by simulation/experimentation.
- A Project Phase- II is student's own work and will need to keep up the effort, and the interest, over several months and through several stages.
- Student need to think carefully about the time necessary to carry-out and complete your project work and the relative writing up.
- The project should present an orderly and critical exposition of the existing knowledge of the subject and will embody results of original investigations demonstrating the capacity of the candidate to do independent research work.
- While writing the thesis/dissertation, the candidate will layout clearly the work done by him independently and the sources from which he has obtained other information contained in his/her Dissertation

C Instructional Methods and Pedagogy:

- Project Phase- II will be evaluated at least once during the semester and at the end of the semester as a part of continuous evaluation.
- Before submission of Phase II project/dissertation report, it is expected from a student to publish at least one research paper in National/International conference. Further, for such publications, Department Post Graduate Committee will identify and approve the

national/international conferences.

- The dissertation shall be submitted for ‘dissertation – evaluation’ ordinarily at the end of IV Semester and ‘dissertation – open defence shall be held soon after the submission of the dissertation.

D Course Outcomes (COs):

Upon successful completion of this course, a student would be able to

CO1	At the end of the course the student’s gets exposure to design a research investigation that incorporates appropriate theoretical approaches, conceptual models, and a review of the existing literature.
CO2	Students will learn to structure a discussion in a coherent and convincing way by summarizing the key arguments and providing suitable and coherent findings.
CO3	Student will be able to draw valid conclusions, relating them to the research topic.
CO4	Students will write a comprehensive review of the literature, including a review of other dissertation research related to their study.
CO5	Students develop a design of their study with a discussion of the methodology to be used including selection of a sample, instrumentation and its testing, sources of data and the data collection process.
CO6	Students describe how their data will be treated and analysed and the significance and limitations of their study.

Course Articulation Matrix:

Course Outcomes	PO1	PO2	PO3	PSO1
